to chat with. Exactly who made all these rules you keep refering to?
Whats his/her name?. Hell, on my 6m machine you talk like you want to,
if someone says my 'first personal is Frank' Im not going to rip the uy
apart because he may not talk like "I" think he's supposed to!

Bob I agree there are some problems on our bands, but taking the
attitude that you have to talk a certain way only makes things worse.
I've listened to guys argue and fight because someone said 'first
personal' on 2m. Who gives a damn, instead of arguing why not just say
"Hello, my name is _____" and let it go. Perhaps the next time he'll
introduce himself as you did. You see Bob, if you want change, then be a
leader and set an example. Dont look to the ARRL to fix everything.

73, Tim

Hi James! How ya been? I've been posting at the usual rate; last week
my articles included:
- Navy/Marine MARS resumes CW nets
- OMEGA radio navigation station to be shut down
- How to subscribe to rec.radio.amateur.misc via an email list
- How to subscribe to the 160m email list
- A followup to operating in Canada
- A followup regarding the ham radio industry promoting our hobby
- A source of cheap nicad batteries
- Two followups to Roy Tucker's "No ham licensed needed" spoof
- A followup to the 14.313 MHz "problem"
- A followup to Rod's note regarding his 10-10 web link
- A grammar error in last week's Newsline

I'm sure there were others, but I can't recall. Do a Deja search, my
little puppet.

>A quick
> check of Deja News shows he's cancelling messages at an alarming rate.

I haven't canceled anything. I don't even know how to do that. Are you
sure the articles aren't just expiring? We lose articles on this news-
reader after just one week.

>I
> would like to invite every ham,cb'er,scanner listener,whatever that the

Drew, while criticizing cw as an entry point for amateur radio is
something I also do, it's doubtful that without the ARRL, we'ld
have more licensees or code free HF usage.

I must conclude that the real reason we don't have more new
excited licensees buying out stocks of every HF, VHF, UHF, and
SHF transceiver, and every commercial antenna is that this
doesn't appear to be an interesting enough hobby to others.
Young men, who might once have found this hobby appealing, now
have computers, cars, work, school, girls and the like to compete,
and frankly viewed that way, we're in trouble. This can also be an
expensive hobby. Yes there are cheap VHF & UHF transceivers
available, but finding working used gear can be worse than shopping
for a used car at times. Now if you have a plan to make amateur
radio more exciting, and attractive to newcomers besides a code
free license. We need lots of friendly and helpful old timers to
welcome newcomers and encourage them, I don't see that going
on either on HF or VHF. I don't see hams playing with things that
are inexpensive, but likely to excite newcomers. Frankly, I don't see
much of a chance of getting millions of new hams. Tell me, how
many new hams can get an accurate assesment of new gear
without one of the magazines. Even on the internet, one can get
few responses. I recently posted a question asking about comparing
DSP units, I got three email responses, and I suppose I'm lucky.
The same question on packet produces zero response. Come
on, three hams out of the probable hundreds is a rather low figure.

If we want amateur radio to grow, then we have to recruit, and make
it fun. We also need some way of dealing with lids, whether they're
on VHF, UHF, or HF that doesn't involve the FCC or illegal action.
We're supposed to be self policing, and we have to figure out
something. The HF cesspools and their VHF counterparts aren't
good for the hobby either. Even with code, amateur radio was
growing when it was seen as something exciting. We have to
make it exciting again, or watch it fade away.

1898. ARRL and the Band Plans

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-29 00:00:00 UTC
From: thompson@mindspring.com
Message-ID: <5rjprk$hqi@camel2.mindspring.com>
Source record: 192757

Somehow the ARRL requesting that states follow the bandplans is being pictured as a power grab. The truth is that the ARRL is trying to stop many of the turf battles that is occurring on the ham bands.

I have been very active in asking that simplex FM be given a chance on 2 meters where many states have taken over every frequency for repeaters. For more back ground see the October 1996 issue of CQ VHF Magazine and my article on saving simplex on 2 meters. There has been a lot of support for this and rightly so!

Look at 40 meters to see the mode battle going on today. DX SSB is being pushed below 7050 Khz by digital modes. This in turn cuts into the space for CW.

There are other cases and all the ARRL is doing is to try to bring some order. The ARRL is the USA representative to both the FCC and the WRC/ITU. They are the only voice we have against Little Leos, Broadcasting, and other services hungry for our amateur frequencies.

If you don't like your ARRL director or section manager..then vote him or her out of office.

You gotta be part of the solution or part of the problem.....which will you be!

Seems to me that the ARRL field organization presents a reasonable
means for members to present their concerns and opinions to the
section managers and/or division manager. That's not at all unlike
our government with legilators from individual parts of each state,
etc.

1904. Transverter for 920 Mhz band?

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-29 00:00:00 UTC
From: Neologue <neo@null.net>
Message-ID: <01bc9bd9$60d9db70$9d64eccd@neologue>
Source record: 192763

In my area the 920 Mhz is getting very popular. A project of modification of old mobile cellular phone equipement is giving great results as many hams here now have a 920 Mhz rig that works well for around 30 bucks and a whole day of bricolage :)

But the radios used are not portable, they are bigger "mobile" rigs. I wonder if there is a possibility of making a kind of "black box" that could be used with a portable transceiver (VHF or UHF) to make possible its use on the 920 MHz band... Repeaters are being built here and it would be nice to use them in portable mode :)

I am not good in electronics, but is this possible, as a small, simple circuit??

Please send copy of replies to neo@null.net

I have been trying to get an amateur radio license since I was five years old. That is about 20 years. I have dyslexia and have had a problem with remembering all of the number and formula related items. I understand it all, but I can't remember it well enough to pass the tests. Also I have had a hard time with the code. I know now that I don't have to pass a code test. But, I would like to pass the Technical test and be a ham operator. I would also like to progress and someday get my Extra license. Could someone help me in finding a way that I could get to my goals? Thank-you.

>Am I missing something, I thought the FCC was not renewing Herbies
>license. Is he still on 14.313?

Herb was still on the last time I checked. As near as I can figure,
he's continuing to use his callsign because he attempted to renew,
and despite the FCC turning him down, and the time before an
FCC admininstrative law judge, the appeals process is not final
yet. Thus from some perspectives, his application for renewal is
still pending. Since he probably mailed in his application before
it expired, the rules provide that he may continue to operate. There
is no doubt that the FCC received his application.

Want to do a petition for rulemaking on the topic? That portion
of 47 U.S.C.F.R part 97 could do with some overhaul in that area,
but I'm not sure what would get rid of Herb now except the Supreme
Court refusing to hear an appeal of the results in the D.C. Circuit
Court. His application would then no longer be pending!

Never had a problem with PC keyboards being whacked by hi-power RF until I bought two Turbo-Plus keyboards at a hamfest for about $13 each. These are designed to provide additional, special keys for Windows 95.

Any PC in the house that was turned on and using one of those keyboards would go ballistic when I went on the air.

Quite by accident, I changed antennas from a G5RV (with its high SWR on the feedline) mounted above the house, to a dipole on a mast some 120 feet away from the house. The problem went away, along with much TVI and Telephone interference. That tells you something right away. The other thing of interest is that no other keyboards that I had used on those same PC's ever had such problems. I have to believe that it is a problem with either the keyboard's cable or the circuitry used in the keyboard, because keyboards themselves are not shielded and haven't been for years.

I am trying to find programming info for a Yeasu FTC-1143 handheld. It is a UHF commercial portable and I can't find any information on it at all through my usual commercial channels. Does anyone have any programming information on Yeasu keypad programmable portables in UHF amateur bands that might work with this commercial unit. Any information would be greatly appreciated.

Those I have met who are not members are more likely to fall into one of
the categories I have described. I guess we end up surrounded by people
who share our views of the world. Perhaps it is because those who have
other views don't want to hear the things we have to say. It is too bad;
it tends to color our perceptions and reinforce what we have set out to
believe. Quite honestly, I would imagine that those hams who do not share
your views have been quite put off by some of your approaches to offering
solutions, so they do not form a part of your informal survey.

You are quite right, Drew -- probably on a group of frequencies centered around 27 MHz. :-) The rest would be gone. Okay, so I exxagerate, but I am certain that there is more than a grain of truth to it all.

I encourage all those with views about any ARRL action to speak out loudly, for ARRL or against it. But take a balanced approach; if you speak out in one area, speak out on them all. You may find that like me, you can find a lot to support, while you are rallying against one issue or another.

If you truly have evaluated all that ARRL does and feel that none of it is right, form a new organization to do those things that you feel need to be done for Amateur Radio. If it is better, I will support it by joining and doing some of the work as an unpaid volunteer. But I will only do so after seeing just how this organization will be structured and see some explanation of how it will be better, see what its agenda is and learn just how I can make my views known to it and how I can affect what it will be doing. I must point out, however, that even planning the planning is a lot of work.

Congratulations on your test. I strongly recommend you to buy ADI
AT-600 Dual Band Handheld. This is a VERY GOOD radio and very
inexpensive. You are looking around $269 US (If you buy a radio
now, you will get a $30 rebate + free speaker-microphone)

Also if you are not interested in listening / transmitting outside of
ham band, Radio Shack's HTX-202 is a way to go. This handheld
doesn't pick up any garbages [well... not true, but less].

Good luck.

>means for members to present their concerns and opinions to the

Exactly. Members. Not amateur radio operators. Members are a real
minority of licensed amateurs, so there is a legitimacy problem with
pronouncements of representation of amateur radio operators.

>section managers and/or division manager. That's not at all unlike
>our government with legilators from individual parts of each state,
>etc.

It is very different, Bill. Our government legislators represent
all the poeple of the state, those who voted, voted for the other
candidate, etc. and the government is often (on good days!) concerned
with finding the will of all of the people by engaging organizations
to determine what that is in an unbiased way. During the primaries,
you may find a candidate only polling members of his/her own party
to figure out what is important. But after an election, the
ideal concerns are with determining what the whole population out
there is interested in, and acting on that. I believe that this
is basically what underlies the complaints about the ARRL here,
all the silly invectives aside.

A quick look at QRZ says the station license for KV4FZ expired
in March, 1996.

There were reports in the amateur press that FCC had declined
to renew the license. Some hearings were scheduled (I think)
but I never heard much further.

Cathi, the antenna is what radiates RF. It is RF which is overloading your appliances. Getting the antenna further from the appliances means that they well be exposed to less field strength. Field strength decreases with the inverse square of distance, so getting the antenna twice as far away reduces the signal strength at your appliances four times, moving it four times as far away reduces signal strength sixteen times, etc. Antenna height and distance are your friend when it comes to reducing RFI.

VCRs are especially vulnerable to overload from strong RF signals because they use the same frequencies internally that the HF amateur radio equipment uses. If the VCR isn't well shielded, most aren't, it will pick up the RF from a 75m or 40m amateur station and think it is seeing the RF signal off the tape (VCRs record video as FM signals in the 4-8 MHz range). This will cause severe picture disruption, and can even cause the machine's servo to lose lock and go into fault shutdown.

The primary service is government. 170.245 is a specific freq allocated
on a secondary basis for wireless microphones.

John, KD4GIK from Sunny Central Florida writes:

Why don't you guys give it a rest? The only thing I see Drew and his band of cut-throats bitching about is the code requirement. What if ARRL suddenly and without warning, encouraged the FCC to abolish all but the most minimal code test? I'll bet he and his friends could still find something to complain about.

As far as the League is concerend, I don't agree with everything they say or do, but I do recognize the ARRL as the only credible organization speaking on behaf of ALL amateurs, including Drew. So I recommend that Drew and his band of internet crybabies join ARRL, and spend some time and energy working from within, and maybe some of Drew's good ideas will become reality. On the other hand, maybe Drew doesn't vote either. If not, it's probably because he doesn't like what he hears coming out of Tallahassee or Washington.

Hello...

Pardon me for jumping in. I am a new Technician Plus. I've wanted to get involved in Amateur Radio for 30 years, but somehow never made the time.

It is my belief that if something is worth having, it's worth working for. It makes it a kind of special brother and sisterhood of people who have earned the right to be "Hams."

I am currently struggling with the code trying to get my General Class Ticket (I already passed the Written Element). It is quite a struggle... I get frustrated and I get discouraged... Then I jump back into the fray and try again. I'm up to a shaky 8 wpm now and have my eye on that elusive 13 wpm. I hit the wall... stand back up, brush myself off, and run at it again.

Keep the Code Requirement. I believe that many of the problems in the 2 Meter Band with obscenities, incessant interuptions and kerchunking, and overall sloppy operating is due to the "Codeless Tech" License. It has become what I remember CB being in some areas, a sorry state for the discipline.

Here's one Newbie who supports the Code Requirement 1000%, even though it makes my life frustrating. Just my personal opinion. Thanks for letting me vent.

Take care...

In all likelyhood it will have enough currect to run a scanner. If not
it just wont work right! You can buy those little wallwarts for under
$10. Be sure to check you +/- before you connect (theres almost always
a blocking diode to prevent reverse connect).

ke4jcd <ke4jcd@juno.com> wrote:

>Thats what is my point. Self Police. What a joke. The ARRL don't get on
>the FCC to take action. :(

One could truly state that the ARRL has not been effective in getting the FCC to take more enforcement action. It is NOT from lack of trying. The bottleneck is partly the FCC and partly the federal prosecution system.

The FCC, of course, has resources that are more and more limited by the cutbacks mandated so we can all get a tax cut and move toward a balanced budget (separate discussion -- different newsgroup). In some field offices, a small handful of investigators cover several states! If faced with a ham who says "diddlyblatz" on a local repeater and harmful interference to a public-safety service, guess which one will get their attention.

Nonetheless, they could indeed find some time to pop a few aggregious examples in the AR Service, and have done so. If the misbehaver responds to an informal inquiry from the FCC, or receives an NAL and pays up, and stops, all is well, and other than ARRL probably mentioning it in the ARRL Letter, it does not get much attention from the amateur community.

The process breaks down after that. If the misbehaver decides to take advantage of his legal rights to be heard in court, the FCC would then have to prepare a case for prosecution. They then stand in a long line, right between those asking to prosecute major drug dealers, kidnapper, President stabbers and sundry bombers and other deviates. You can imagine the reaction when the prosecuters are told that the horrid criminal said "diddlyblatz" on the repeater.

How is this problem much different than the group I was near at the local shopping mall. Every noun they said had a "diddlyblatz" associated with it. I don't think anyone could be effective at getting the local police to enforce the laws about "diddlyblatz," either.

Nonetheless, ARRL will continue to encourage (or stronger, is possible) the FCC to do more enforcement in Amateur Radio. We will also continue to support the Amateur Auxialiary, who are volunteers who develop evidence against local rules violators (primarily repeated malicious interference). We support their efforts by making HQ staff and our Washington legal office part of their work, followed up by ARRL taking the case to the appropriate level at the FCC. From there, the problems begin, but, as I said, it is NOT from the ARRL's lack of trying.

Say what you will about our effectiveness, but I do not think it could correctly be said that the ARRL "don't get on the FCC" about enforcement matters. We have and will continue to do so.

Why, ARRL would have a whole new set of people believing we did not do
the right thing. :-)

>I'll bet he and his friends could still find something to complain
>about.

They probably would, and they would be correct in many cases; heck, I
have things I complain about all the time. I don't mind those who are
informed on a subject and speak out in opposition to what ARRL may be
doing, Those who tell me when I am wrong can be my best friends; they can
prevent me from making a mistake. IMHO, those who are willing to do this
as part of the process are those who make ARRL strong; we can then be as
good as the best of the best.

I generally take issue with those who present ARRL as "all or nothing,"
or those who resort to exaggeration and distortion to make their points.
ARRL has its good and bad points (which are which is often a matter of
opinion), but it is the best tool we have to work together.

Many amateur radio operators have contacted us in recent months regarding availability of affordable electronic analysis and synthesis tools. We have now released Version 2 of the Professional Partnership (PP) Program. For the nominal one-time $975 charge, the PP program may be distributed throughout a club, organization or company. Of special significance is the profound level of Wireless/RF/Microwave capability included:

Nodal Circuit Analysis with True Two-Node Port Definition
Unconstrained Noise Analysis
Transmission Structure Synthesis & Analysis
Over 40 Single & Coupled Topologies
Strip (Planar) Structures
Wire Lines
Coaxial Arrangements
Waveguide (Non-TEM) Topologies
Passive Filter Synthesis
Lowpass
Highpass
Bandpass
Prototypes
Practical Reactively-Coupled Realizations
System & Receiver Design Support
Link, Terminal & Radar Analysis
System Architecture Characterization
Spurious Analysis
Transmit & Receive
Coincident & Tuned
Preselector & Output Filtering
Phase Noise Analysis
Time Domain Effects
Frequency Domain Effects

600+ Page User's Manual with Examples & References

Acquire a single PP Program package for your club, company or organization and you will be furnishing all of this needed capability to every designer, not just one! Our competitors are furious with us for having created the uniquely progressive opportunity. It seems they're still using dongles to hinder access to their own products.

Please contact me for additional information, or see:

All new

-AMD K5 CPU equivalent speed same as Pentium 90 MHZ
-PCI Bus, and ISA bus motherboard.
-Four ISA slots, Four PCI slots.
-8 MB memory on 72 pin SIMMS with two more empty SIMMS slots.
-256K high speed cache.
-Video M3 64V+ MX86200 Graphics Copocessor with 1M VRAM

-Mini tower case. 104 keyboard. new mouse

-SoundBlaster Discovery CD pack with 16 bit SoundBlaster stereo sound
card, quality speakers, plus 18 multimedia titles in new sealed software
packs (encylopedia, PhotoStyler, Digital Morph, many games and utilities).

-Hard drive is compressed to 250M loaded with Windows 95,
Microsoft Works for Windows and more.

-Documentation and drivers included for motherboard, modem, mouse, sound
card, CDROM and video card.

Price $430 plus $15 shipping, add $40 if you want additional 8 M memory

C O M P L E T E S T A T I O N

I am selling my entire station. See it, test it, buy it.

Icom 751 with CW filters, RC-10 keypad $800

Icom 2KL Solid state 5OO watt amplifier $1300

Icom AT-500 automatic tuner $350

Cushcraft A3 Beam $300

Alliance Ham rotor $100

40 foot crank up tower $300

The prices noted above are how I arrived at
the total, if you strongly disagree, tell me.

All messages answered. If you do not get an answer I did not either get
the message or you didn't.

Ray, I thought the 200ma sounded a bit low and I just glanced at the little wall wart power supply that came with my Radio Shack scanner and it's rated at 500ma at 12V so you might want to get a bit heftier wall wart supply at the Shack or the next swap and shop.

I do note that seven ARRL Divisions are up for re-election. See that
August issue of QST, page 75.

There are a few eligibility requirements. One must be a Technican Class
or higher, at least 21 years of age, have bden licensed and a full
member of the ARRL for 4 years preceding nomination and have no business
connection throhgh which one could gain by shaping of the affairs of the
League. IMHO, all reasonable and appropriate requirements.

The 170.245 MHz frequency is governed under FCC Part 90, 90.265.a/b. It is usable by eigibles (Sec.a; Power, Petroleum, Forest Products, Special Industrial, Business and Railroad Radio services) for low-power, wireless microphone operation subject to the following:
1. The emission bandwidth shall not exceed 54 KHz
2. Output Power shall not exceed 50 mw
3. Stability shall be +/- 32.5 KHz of assigned freq.
4. Unprotected from interference from other licensed operations in the band. If Government or non-Government users are interferred with, operations must cease. Also, applications are subject to Government (Federal; other than FCC) coordination.

Summary, if you're not one of the listed elgibles, its not legal. However, given the Friendly Candy Company's record of enforcement in the amateur bands, it's likely you could put up a KW wireless mic and never receive a notice of violation. Only public safety frequency interference is still treated as a serious matter at the Commission nowdays.

Hope This clarifies.

I knew someone would mention both of those things. I figured it would be
Gary C. :-) No question that the codeless Tech license has contributed
to growth. After all, that's one reason hams wanted it and the ARRL
supported it. The change to a 10-year term does tend to push the numbers
up somewhat, but it's clear that it isn't the entire effect; there *is*
growth. My purpose in posting this table was to counter the perception
that ham radio isn't growing.

> "Growing" by a couple of hundredths of a percent of the general population
> does NOT seem like something to celebrate or get excited about ... I don't
> have the numbers, but I'd like to know what the growth of internet users as
> a percentage of the population has been over the 1990-present time frame.

Apples and oranges, Carl. Ham radio is not the Internet, so why should
their growth patterns be at all similar? Aside from which, the growth of
the Internet since 1990 outstrips the rise in just about anything you
care to name. ('Cept maybe the stock market. :-)

The reason the Internet has grown so much is, in part, because you need
zero understanding of the underlying technology in order to get on the
'Net. It's not my impression that you would approve of growing ham radio
by making it require zero understanding of the technology. (Let's leave
the smart-ass "it already does" responses for another thread, please.)
So again, comparing the growth of ham radio to that of the 'Net is

really off-base.

It's unreasonable to think that a large part of the population is *ever*
going to develop an interest in radio communication as an avocation, any
more than a large percentage will develop an interest in say, model
railroading. So the proper standard of comparison for the health of ham
radio is not mass-market activities like the 'Net, but rather our own
past numbers. By that standard, we ain't doing so bad.

And in the end, it may well be that the best-case number of viable
candidates for ham radio -- the number of people who are ever likely to
develop an interest in radio communication and technology for its own
sake -- is only a few tenths of a percent of the population.

I think the supply will work just fine. The scanner might draw
even slightly more than that at maximum volume, but since
we are talking about audio, the peak power demand will only
be brief. At average listening levels, this adaptor should
work fine!

You come up to Kentucky talking like that about no code techs ,your in
for a good ass kickin ! I don't know about Fla. but around here we have
none of the above problems on 2mtr (or any band).Hams around here
respect the hobby and act acordingly !
I think code still still has it's place in ham radio , but I also think
no coders should get to work say 20 mtrs up , or at leat 10 mtrs to get
in a little dxin .
If you want to get around the 2mtr problem , be nice and move to
Kentucky :) 73

It's O'Brien idiot. Or the paper could say something like this:
"Middle-aged flaming jewboy teacher living with ugly Viet-Cong woman.His
parents in dis-belief" That would be the headline. The story would go
like this: A bitter,distraught jewish teacher living with oriental
female cannot effectively propagate his pissy little 5 watt cw signal
off his 2x2 mile island. Thus he has overly-compensated by flaming

everyone in the newsgroups to reaction and then promptly deleting his posts. He especially delights in flaming anglo-gentile names. He continues to sit in his private island collegiate hell spewing forth venom whenever possible,even though every post he makes is being forwarded to the Hawaiian Senate."

But of course that's only hypothetical,right Jeffy?

Ray, I have a 560 too and use a 500mA wall-wart adapter. It does get warm when the radio is blasting though. Conversely, it is stone cold when the radio is off. You may just want to keep tabs on the temperature of yours. If the display lights dim when the volume is turned up it's telling you it needs more juice.

Hello,
I was wondering if anyone knew of a DOS or Windows program that would
decode packet radio using a sound card ?

Thanks in advance
Bryan

>Care to elaborate on what the bell curve represents?

I would have thought the term "imagine" was self-explanatory to the
point that most people would understand I was drawing a parallel.

>taken any time to help address this problem? Computer generated
>questions from a parameterized pool of questions would surely
>fulfill the FOIA requirements and would presumably address your

>crowd likes to shout: "Just do it!"

I would be happy to write the program, Todd. As soon as someone gets
the regs changed so it would actually be used. No sense in developing
something that isn't going to be used.

>Again, in what way does relate to the problems mentioned above?
>The behaviors KF6MYR describes existed long before the revised
>technician license became available.

Yes, they did, but I do not believe they existed to the same degree
as they do today. As my message indicated, there are *many* reasons,
some interacting with others, which have lead to the problems we have
today. A lack of elmering is another example of something which has
contributed heavily, in my opinion, to the problems we have. No longer
do new hams have "human" elmers -- their elmers are Gordon West and
ARRL Question Memorization Guides.

>> Moving to multiple choice code examinations is another.
>
>Do we have a problem with people not knowing the code well enough?

Yes. Current multiple-choice code tests do not provide a good test
base. Tests should be solid copy, with 75%+ total copy needed to

"pass". Furthermore, we should have a sending examination.

Now, I say "should", because I realize that we are not going to get this type of testing implemented fully within the VE system we have today. I *hope* we do, but I doubt we will.

[yet more excuses for lax standards deleted].

>Hmmm, this is an even more interesting conjecture.

Sorry Todd, not conjecture. Fact.

ARRL studies have indicated the "average" ham is an affluent white male. However, the affluent white male is not the "average" member of our population. As we move from one to the other, the societal problems which beset the average member of our population will begin to appear in amateur radio.

>attention.

Well, Ed, I'm sorry to say that this is one area where the ARRL has
failed.

For instance, the ARRL could work with the FCC to help build an evidence
submission system, where hams could collect evidence (in accordance with
FCC guidelines) and provide an affidavit as to its origin, etc. This
information could then be filtered to the FCC for action.

I believe that the evidence collected by hams must circumvent the AA,
because the AA is politic-ridden and useless. I personally had DF and
fingerprinting evidence I collected against a jammer in Barrington, RI
(N1JBC) squashed by the OOC in this state. "He's just a kid, I'll
straighten him out."

Could you elaborate? Exactly how is the deck stacked in the election?

As for getting on tha ballot, it's no trick at all. Just rustle up 10
ARRL members in your division to sign the nominating petition. Heck,
anyone should be able to locate the needed 10 right here on r.r.a.m.

Hi Ray,
Why don't you call Uniden (they do have an 800 number - it should be listed
in your radio's manual; or call the toll-free directory).

If you have a multimeter you can measure the current the radio draws
while its attached to your car battery. If you don't have such a meter,
I'd bet your closest Radio Shack store would be let you use one of their
demos.

The back of the radio should have a label that states how much power (wattage)
the scanner uses; use P/E=I.

INFORMATION, 73S DE COL VK2CTD

NEWS ITEM FROM CONTEST MANAGER 1997 ANARTS WW RTTY CONTEST
==
23 JULY 1997.

GOOD NEWS:- WITH FIVE WEEKS TO GO BEFORE ENTRIES FOR THIS
YEARS CONTEST CLOSE, WE ALREADY HAVE 87 ENTRANTS COMPARED WITH
THE TOTAL OF 82 LAST YEAR. SWL ENTRIES ARE AS LAST YEAR AND
MULTI ENTRIES ARE DOWN ON LAST YEARS TOTAL, BUT THE SINGLE
OPERATOR CLASS IS DOING WELL. IF CONTINUED AT THIS LEVEL WE
MAY EXCEED 100 ENTRIES THIS YEAR.

THE STANDARD OF LOG-KEEPING HAS IMPROVED, PROBABLY DUE TO THE INCREASED USE OF COMPUTOR GENERATED LOGS. HOWEVER, THERE IS STILL A NUMBER OF SIMPLE MATHEMATICAL ERRORS SHOWING UP, AND A NEW ONE INVOLVING LOGGING INCORRECT ZONE NUMBERS. IN A MEDIUM SIZED LOG AN ERROR OF SEVEN POINTS CAN CAUSE AN END ERROR OF TWO OR THREE THOUSAND. AND FOR ANOTHER EXAMPLE, THE FAILURE TO DOUBLE QSO POINTS FOR A VK2SG CONTACT COULD COST THE UNFORTUNATE OPERATOR OVER 40,000 POINTS IN AN EXTREME CASE.. THERE ARE ALSO EXAMPLES OF THE OPERATOR TRUSTING THE COMPUTOR COMPLETELY - REMEMBER THE OLD ADAGE, GIGO. SO IF USING COMPUTOR SYSTEMS, CHECK THAT THE RESULTS ALWAYS APPEAR TO BE REASONABLE, IT IS YOUR FAULT IF YOU MISS AN OBVIOUS OPERATIONAL ERROR.

IN MOST OF THE ERRORS DETECTED THE EFFECT HAS NOT BEEN UNDULY GREAT, BUT TWO MAJOR READJUSTMENTS HAVE BEEN MADE. ONE WAS DUE TO THE CONTESTANT FORGETING THAT QSOS WITHIN HIS OWN MULTI DID NOT COUNT AS MULTIS (VARIATION OVER 100,000 POINTS), THE OTHER CASE IS MORE OBSCURE AS 'SUMMARY' FIGURES DID NOT AGREE WITH TRUE FIGURES AVAILABLE ON LOG PAGES. ONLY 'MULTIS' WERE INVOLVED AND IT IS BARELY POSSIBLE THAT A DRAFT SUMMARY SHEET WAS MIXED UP WITH THE LOG SHEETS. (VARIATION IN EXCESS OF 300,000 POINTS - IT WAS A BIG LOG), SO WHENEVER WORKING ON CONTEST LOGS, BE SURE THE RESULTS 'LOOK' REASONABLE. THE HUMAN MIND CAN STILL SORT OUT COMPUTOR CONFUSION.

NOT SO GOOD NEWS:- THERE HAVE BEEN 21 VK STATIONS IDENTIFIED IN THE 87 LOGS CHECKED SO FAR. BUT, ONLY FOUR VK LOGS HAVE BEEN RECEIVED. THAT RATIO OF ONE IN FIVE MAY EQUATE TO, SAY, THE USA WHICH SO FAR HAS 24 LOGS IN WITH OVER 120 USA STATIONS COUNTED IN JUST ONE PARTICULAR LOG.BUT WE ARE THE HOST COUNTRY AND SHOULD BE MAKING A BETTER SHOWING. SO WHAT ABOUT IT???
NO LOG IS TOO SMALL - SEND IT IN IF ONLY TO STOP THE CRITICISM WHICH IS ALWAYS LEVELLED AT OUR LOW PARTICIPATION RATE.
MORE GOOD NEWS :- THE INTRODUCTION OF VK2SG AS A SPECIAL COMMEMORATIVE CALL WITH A BONUS FOR EACH QSO HAS BEEN WELL RECEIVED, ESPECIALLY FROM STATE-SIDE, FROM WHERE THE IDEA ORIGINATED.
YOU MAY EXPECT ANOTHER NEWS ITEM BEFORE THE RESULTS ARE FINALLY PUBLISHED, WHICH MAY CONTAIN MORE CONCRETE FIGURES.

73 DE JIM, VK2BQS CONTEST MANAGER.

RTTY - HOW IT BEGAN - PART 7
BY VK3KF ERIC FERGUSON

Another period of long delays and frustration ensued. The PMG'S Department appeared reluctant to issue another permit to enable me to operate Fl, officially, I might add as there were occasions when I had contacts, particularly with ZLLWB, who

had made an appearance after returning home from the USA where he had acquired a pile of RTTY equipment and was experiencing the same problems in getting official sanction to operate RTTY from the NZ authorities.

It was not until a telephone conversation with an executive of the PMG. on another matter entirely, that some explanation was forthcoming regarding the delay in issuing the Fl permit.

His inter-departmental enquiry uncovered the state of affairs. in which it was revealed that the department had no objections to the use by amateurs of Fl emissions, but it appeared technical advisers to the WIA. had recommended that Fl not be a part of amateur radio and the Department were reluctant to add this mode to the official list. This, of course, explained the 'fobbing off' without reason I had been handed out by the Radio Branch... I might add the reason given by the WIA for not approving Fl was it's excessive bandwidth occupancy.

How to overcome this objection? I saw the light. Why not invite the objectors to view a spectrographic illustration of bandwidth occupancy of other modes used by amateurs, AM being the more popular in those days as well as the up and coming SSB and with this in mind, letters were sent off to WIA and PMG inviting representatives to such a demonstration.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(18 JULY - 24 JULY)

ISSUED 25TH JULY 1997

SUMMARY
Date 18 19 20 21 22 23 24
10cm 70 71 71 71 72 76 79
A 11 11 7 7 7 7 (8 EXPECTED)
T 7 10 12 14 11 18 18

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH WAS QUIET TO UNSETTLED DURING THE PERIOD.

FREQUENCIES WERE MOSTLY NEAR PREDICTED MONTHLY VALUES, WITH DEPRESSED PERIODS TO TEN PER CENT ON 18TH AND 19TH. THERE WERE ENHANCED PERIODS OF 10 TO 30 PER CENT ON 19TH AND 24TH JULY. SPREAD F WAS NOTED ON 21ST AND 23RD.

FORECAST (25 JULY - 31 JULY)

SOLAR: VERY LOW

GEOMAGNETIC: QQUIET TO UNSETTLED

FREQUENCIES: NEAR TO 10 PER CENT ABOVE PREDICTED MONTHLY VALUES.

Notes of Interest:

Libya, 5A, A group from OE will activate 5A from Tripoli between Aug. 31 and Sept. 7 using the call 5A28. Their plans are to include RTTY. Suggested frequencies: 14088, 21088, 28088

Libya, 5A, Later in the year a group from DL will active 5A1A from Nov. 24/25 to Dec. 4. They will have two stations operating simultaneously including RTTY. QSL via DL3KDV. An e-mail reflector is planned

9M6, Spratly IS., Bob, N2OO and Bob, N0RN will operate from Layang-Layang, in the Spratly Island group(AS-051) between 14 and 18 August. An effort spearheaded by W2IJB to entice the group to operate RTTY seemed to be sucessful. AA5AU has offfered a KAM+ TNC and interface cables from Jay WS7I that will be sent to N0RN.

TF, Iceland, Ove, LA2IJ will be active from TF from July 21 to July 27, mainly on RTTY 14.083, 21083 and 7037. QSL to LA7IJ

Please send next weeks bandpass to Luciano I5FLN:
I5FLN AT IOL.IT. or I5FLN AT ITOS.ITOS.ITA.EU

73, Randy WX5L WX5L at i-10.net

ARLD031 DX news

This week's bulletin was made possible with info provided by The 599Rpt, Tedd, KB8NW, The OPDX Bulletin, Lars, SM3CVM, QRZ DX, the Daily DX, 425DXnews and Contest Corral from QST. Thanks to all.

EASTERN MALAYSIA, 9M6. The Special Event callsign 9M6HIL will be used from the Hillview Gardens Resort in Keningau, Sabah, on August 5 to 24. Operators will include N2OO/9M6OO, N0RN, VS6KY/ZL1TX and a number of local 9M6s. The permanent callsign for the resort will be 9M6A. QSL 9M6HIL and 9M6A via N2OO.

SAINT PAUL ISLAND, CY9. Robbie, VY2SS, Bob, VY2RO, Bill, VY2LI, Art, VY2KHZ/W3KHZ, and Paul, VY2CD, will be QRV from July 23 to 31 as CY9SS. They will operate primarily RTTY and 6 meters. QSL via VY2SS.

>From the
The Ohio/Penn Dx PacketCluster
DX Bulletin No. 314

CY9, ST. PAUL ISLAND (ATTENTION RTTY OPs). Robby, VY2SS, reports to OPDX that he and operators VY2LI, VY2CD, VY2RO and VY2KHZ will be active during the last week in July. The team hopes to land on the morning of the 23rd (weather permitting) and leave on the 31st. They report that their activity will be concentrated on RTTY as it has been neglected in many past operations. Their callsign will be CY9SS. QSL via VY2SS. There will also be activity on 6 meters beaming at Europe with a beacon on 50.101 MHz. They will also participate in the IOTA contest from there as well.

WANTED

JULIAN VK2DFI IS LOOKING FOR A PAPER TAPE PUNCH MACHINE, OR, A TELEPRINTER SUCH AS A SIEMENS 100 WITH A PAPER TAPE PUNCH ATTACHMENT. IF YOU STILL HAVE SUCH A PIECE OF EQUIPMENT THAT YOU WOULD LIKE TO DISPOSE OF PLEASE SEND A PACKET MESSAGE TO ME VK2CTD AT VK2WI OR TO EMAIL COLIN.DAVIES.DSE.COM.AU

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065
Australia, for such matters as membership and general
enquiries. Enquiries can also be made by packet to the
President (Col) VK2CTD at VK2WI, or the Secretary (Pat) VK2JPA
at VK2WI.

Email address for the Broadcast Officer is :

patl(at)conmusic.usyd.edu.au
or patl(at)mail.users.usyd.edu.au

73s de Pat VK2JPA Broadcast Officer

Pretty much.. There are several sights which will give you a practice
exam to see if you are ready for the real thing. The tests randomly
pick the proper amount of the questions from the pools.

Who decided that "Q" signals (QSY, QRM, etc) are "HF" terms which cannot be used on repeaters? I don't recall any FCC regulations regarding the use of "Q" signals on certain bands. It seems to me to be easier to say "QSY to five two simplex" than to say "lets change our operating frequency to one forty six decimal five two megahertz simplex", unless of course you don't know what QSY means.

> QRP & Homebrew!

Well part 97 don't say it's. People don't need to use Q code's. all you need is to talk pain. Code's are not needed. I say let's go to simplex 147.495 this is ke4jcd clear. Other say let's QSY to simplex 147.495 this is ke4jcd and I'm QSY to 147.495. You till me I need a spell checker. Witch make's more sence? that's about daaaaa! to talk all that Q junk. =

You ask me how long I been a ham. The 1st time I got my licence when I was about 6 or 7 years old. I moved up to a General Class, But becouse of all the moving we did becouse of my fathers job. I let it go. I did not know the Exp. Date till it was to late. So this time I have been into Ham Radio as of 1/18/94..... Total about 10+ years. if you count the 1st. time up in New Jersey where I'm from. =

This time I did not go up to General for I'm not into HF. But I do scan the bands. I know what's going on. I keep my ear open. Also I don't drink coffee. I'm a tea man. :)

Now as for other Older Hams thay will not talk to the Q Code Hams as thay are called. Also We are not Police we are Ham's Q Code and Singles 7's are not needed on VHF or higher. That's to help police keep there trans. short. but. I still can Clear, I'm In Lakeland. Whats your Location. What your Handle. Let's Go to 7.495 Simplex. This is ke4jcd I'm Clear. Are you now OM. :) Not QRT. I'm Clear. Got it OM. :)

> Ed Hare, W1RFI
> ARRL Laboratory Supervisor

My whole point is the ARRL can no longer help keep Amateur Radio as it
was back in the 1960's and Mid 70's when I was a General Class Ham. But
due to all the moving my father did I lost track of time and my License
Exp. Now that I'm older I came back to Amateur Radio. Man you can see
the changes. People are not like then, Kind, Helpful, Ect. There are
some but not like then. Old days are gone. Now I see that Amateur Radio

is going down the same path as the CB Radio has, and Just as the CB has been turned lose And is now a Useless Band. So I now See Amateur Radio If something is not done to stop it. :(The ARRL to me was there to Help Keep the Amateur Radio alive. Now it to has gone down hill. I know people here in Lakeland that have been like yourself working very hard to help keep the Bands Useful and Clear. Now thay have turned on the ARRL and have quit. Thay say the Real ARRL in gone. All that is left are people that have no real power to keep the Bands, and Hobby alive. I see it too. I don't careless about the Book's and other thing's the ARRL make. I only supported the ARRL to help keep the Hobby alive. But with all this talk of droping the CODE and lowering the Code Req. I don't see how this will help the hobby. I mean, No one anymore has to build there gear like in the old days. No now you just go to AES, HRO, or whoever and Buy your Ham Gear. That it your up and running in notime. When it's not the Code that stoping people from getting into the hobby. It the lack of really knowing what the hobby has to offer and the fun you can have. I mean here in the lakeland area people fly alot on Planes. You have to go to flying school and take hours of testings to get a licence. The Code is Fun and something that anyone with good hearing can learn and injoy. But all these people don't understand is that Code is part of radio that was the 1st form of Comm. that got us where we are today. It's a lost art form. But people don't see the point in keeping it for there not seeing that Amateur Radio is a HOBBY and part of that is learning all forms of that hobby. Just like a computer you can't realy come to injoy it to you learn DOS, Windows, OS2 Warp, ect. The more you know the more Injoyment you can have. Some with Amateur Radio the more you know the more joy it can brain. But when you have Hacker's out there Hacking up you Computer you can't Injoy your Computer. Same holds true with Enforement without it this hobby will DIE. For people will not injoy the hobby when your always Fighting with a JAMMER making your hobby useless. Then Also people that are looking into the hobby hear this trash it make's us all look bad.:(

I'm not very good at trying and writing, But I do my best to make my point. I don't want my Hobby that I took my time and money to get back into to go down the drain. I will only Support Group's that support to Better my hobby not sell it out like the ARRL is doing. Plus the ARRL has no Real Power anymore like in the past. Most older ham's have droped out of the hobby and quit. I to have droped out for the most part due to the people that now run the VHF, and UHF bands. I know use mostly the Internet and My Cell Phone to call and talk to people. You don't get jammed out. :(I see that Amateur Radio is going to be another CB Band with it's new Dog Eat Dog people. Power, Power, Power, Just like the CB. for if thing's don't get any better. I to will quit and let my licence go not becouse of code. For what good is trying to talk on a band that you can't use. :(I only use Simplex now. The Repeaters are dead most of the time. For you get Jammed when you try to use them. :(

I hope you see where I'm comming from now. I only joined the ARRL to help in the fight to keep the hobby fun. Right now I have more fun on the internet then on Radio. IRC Room's and Iphone room's you can kick

out people you don't care for. :) Now in my car I use the cell phone mostly now. you don't get jammed out. :) I do have idea's to save the hobby but it's not lowing or droping the code. It's getting people to learn how this hobby can be used and injoyed. Your Book's are a start. better PR is 2nd, Two getting Ham Radio into the Public eye. Like the Internet, TV, Radio, Ect. Showing up at stores with booth's with Ham Radio Ops. Showing off there hobby. Showing the joy of Amateur. I have a page that I'm working on that will top my old one. That has a show and tell. This is what's needed. Also people VOTING! :) People getting onto the Gov. about the poor service we are getting. Also A Fee for Amateur Radio Licence that will be use for Enforcement of the Amateur Bands by the FCC. Now that what I think.

...I usually try to stay away from these particular subjects, but I just have to add one thing....

Listen to your favorite (or at least most local) FM progressive or (worse still) "New Wave" radio station for 30 minutes. The language and rudeness you hear from these people is unbeleavable. They are broadcasting at 50 KW or more, some via nationwide feeds.

So how can ARRL be blamed for not getting the FCC excited about ANY number of amateurs with diarea of the mouth at 100 watts - or even 1500 watts?!? No-one has yet been successful getting the FCC excited about the "shock-Jocks" who would (it would seem) be a much bigger blip on their radar.

Listen to the (commercial) radio waves. You can expect the FCC to be hot on our amateur radio problems about 10 minutes after the badmouths on commercial radio get their "pink slips." Until then, it might be a whole lot more constructive to think about what else can be done in the way of enforcement. The ARRL has nothing to do with it - they do what they can.

Dear fellow top-banders,

I don't want to take up a lot of your time and I'm not asking for much
but you would be doing me a great favour if you could send me a short
e-mail with the following information:
your callsign, number of DXCC countries and zones confirmed.

This information will assist me in compiling the largest and most
up-to-date rankings of top-banders on the Internet.

I'm sure many of you have spent years reaching your current level so
please spare a few moments and share your achievement with the rest of
us.

Regarding your problem with AES:

I can tell you that I have spent (literally) thousands of dollars with
this company, order-
ing for myself and other friends and I can honestly say I have NEVER
experienced trouble with them. They are courteous, prompt and I usually
get my order within a day or two at the outside.

I would strongly recommend that a.) You give them an opportunity to
explain and make it right and, b.) You be cautious in posting negative
things like this without fully exploring the reasons with upper
management.

We are all forced to deal with delays at times, but this does not
constitute a "bad" com-
pany and your admonition to "beware" seems a bit hasty. Give em a call
and talk to the front office, I am sure they will stumble over
themselves to make it right.

>2 Meter Band with obscenities, incessant interuptions and kerchunking,
>and overall sloppy operating is due to the "Codeless Tech" License.

Try 75 meters some night with "Big Al" and his arch-rival "Pork Butt",
duking it out for supremacy on the frequency. Or, if daytime HF'ing is
more your style, check out Herbie and the gang on 14.313. Constant
jamming, music, sound effects, personal attacks, profanity, malicious
interference, etc.

Listen to this for a while...then come back here and tell me how bad 2
meters is and how great of a lid filter Morse code is.

Hello

I am writing in references of the EZ Clone program, I am using this program on my kenwood TM/V7. The reason I am writing is to see if anyone else has purchased this program? I would appreciate any information that you might have concerning the ease or lack of.

The reason I say " or lack of " is because there is no help available with the program. Also there is no way to print out the list of frequencies / channel assignments. I have contacted the manufacture quite some time ago and brought this to their attention. At that time they assured me that there was a fix in the making, I am still waiting.

I think the program will work just great once they get all the bugs work out. I don't think they should have released it just yet. I would appreciate any information or problems you might have to pass on. As far as anybody buying this program I would not recommended it at this time, in the future when they have " help and the capability to print out the assignments locations " than I would buy it..

When I lived on Lake Michigan (and still when I visit up there) the best scanner listening tended to be the CG working channels:

Ch 21 157.050
Ch 22A 157.100 (used for ship-to-CG comms)
Ch 23 157.150

The 25kHz offset channels between these (157.025(?), 157.075, 157.125, and 157.175(?)) are also used for CG ops -- I forget the channel numbers, but they're in the 80s. I've copied WEFAX and other interesting things on them, but at least on Lake Michigan the three above were the most active and interesting.

> Location. What your Handle. Let's Go to 7.495 Simplex. This is ke4jcd
> I'm Clear. Are you now OM. :) Not QRT. I'm Clear. Got it OM. :)

Your statements seem to be very conflicting Bob, not to mention very difficult to understand. On one hand you say repeater users should keep thier transmissions as "short as possible" on the other hand you say use of Q codes are not appropriate on VHF, yet you point out Police use "codes" to help keep their transmissions shorter? So which is it Bob?

Bob who taught you the business Bob? I'd like to know where all these 'rules' come from Bob. I've been having so much difficulty talking on VHF frequencys, where can I get a list of all these rules to make it easier for me?

Regards,

Tim, ka8ddz

There is a new contender in the race for superior sound quality on the Internet called Liquid Audio. It provides high quality sound through exclusive Dolby Digital technology. Soon many online radio stations will host Liquid Audio (in place of Real Audio), as it has a much better sound.

Their are hosting a giveaway at http://www.liquidaudio.com for CD recordable drives - the equipment you'll need to move your CD from your hard drive to your home or car. While you are there, you can check out sites that are already using Liquid Audio to preview new music and preview singles on the site.

Go in to a Radio Shack dealer and look at their wall plugin type power supplies. I'd recommend one capable of 800ma or more. Be sure to get right size plug and POLARITY. If that little 200ma supply you have works, it may be running hot and posing a possible fire hazard. Inadequate current won't hurt your scanner, it just won't work well, or at all.

You are as wrong as you could be. The code requirement isn't keeping HF frequencies lily white either. Tune through these bands and listen to some of the "Real Hams" make asses of themselves before you blithely blame the Techs for all of Ham Radio's ills.

I doubt mariners use M/HF on the Great Lakes. He surely means the VHF
channels/frequencies, such as ch16 = 156.80 MHz, ch22a = 157.22 MHz, etc.

2020. QRP CW xmitter: Use a TTL oscillator module on a ham band

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-31 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseEE6321.ABB@netcom.com>
Source record: 192656
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc

Seems a quick and easy way to do a QRP CW transmitter would be to select one of those TTL oscillator modules that oscillate on a ham band frequency, perferrably in a CW subband. Saw some surplus "AS-IS" soundblaster PC cards with 28.322MHz, seen a few other ham freqs elsewhere too.

Mount the oscillator module at the feedpoint of a dipole or vertical, and run a +5 volt switched (by morse code key) from the ham shack. You'll need a seperate recieve antenna. Or just use a Radio Shark shortwave receiver with BFO and a long-wire antenna. It would be like the old days of the All-code novice license, with xtal locked xmit frequencies.

Yeah, it's full of harmonics, but at these QRP levels, that shouldn't much matter. But if you do RFI your neighbor during his favorite TV show, just wait untill that show is over.

Body handling: HTML body converted to readable text

Hello,

A while back I got my first CB, a Cobra 18RV. I did not have an antenna, so I simply put up an old mini-TV Dipole antenna in my attic, I ran the wire down, and simply connected it to the antenna conector. I didn't ground the radio, I didn't even have anything leading out of the outside part of the antenna connector on my CB. I found performance to be OK, not horrible, but yet not quite good. I got up to 5 miles range. Then the mic went out on the radio. I found out that a new mic from Radio Shack is $14.95, but I paid $15 for the CB, so I thought it would be cheaper to just get a new CB. So I did. I found a brand new, in the box, Cobra 19 Ultra for sale at a flea market for $25, so I bought it. The unit was brand new. I got the whole thing together, but I already had taken down my mini-TV dipole in the attic. So now I went searching for a base CB antenna. I got one for $7 at a flea market, and I also got a SWR/Power meter too. The antenna is about 9 feet high, and came with a small mag mount base thing, which obviosly didn't belong on this antenna. I got the proper adapters from Radio Shack, and put it in the highest point in my attic. I used a cable TV wire by changing the plugs on each end to run it down. Now, when I key the radio (remember, this is the Cobra 19, not the 18RV) I see the radio's build it S-RF/Power meter go all the way max to the red part. From my expirience, this means that the antenna is performing well. My base power supply is a old train set power supply, which has a variable meter that goes from like 3 volts all the way up to about 14 volts. I run it at 14 volts, and the radio's meter seems to be showing that the power supply is fine. I also have an external SWR/Power meter, but I don't know how to use it. I didn't get the instructions with it. It's a Radio Shack Micronta meter, with a switch that switches between "ref" and "fwd", and a small whole in the middle which reads "FS ANT", and also a tuning dial that reads "CAL". I have found that my range has decreased alot, I now get about 2 miles. Could this be because I'm using a Cobra 19, and not the 18? The Cobra 18RV is almost twice as big as the 19, but the 18RV has three weather channels, and the 19 doesn't. Could it be simply because the 19 is phisicly smaller in size? The 18RV is an older model, I would guess 1990 or 1991. The 19 is brand new. Both radios perform excellent when mobile with a mag mount, I sometimes get up to 20 miles. Please help me with this installation. What am I doing wrong? Should I install the SWR meter and see what happens? I know that a 1:1 match is perfect, and if the second number is high then it's a bad antenna match. But I do not know how to work the SWR meter. I also tried adding ground. There is a small screw on the back of the 19 where you can hook up a wire to ground, and I tried it by putting the other end of the wire around a metal nail and putting it into the

lower part of an electrical outlet which is ground, but I did not see a diffrence. Please tell me what I am doing wrong. My operating location is also somewhat low, surrounded by some hills, but nothing major. Please advise me.

Thanks alot,
EugeneD@aol.com

Well, you could gently and politely point out that if he talks that
way, people will think he's an idiot.

Sort of like people who spell it "2 meaters," (among many other
egregious mistakes in basic English) and then complain about folks who
talk funny.

All the more reason for those of us who remain to give them a better
example, then.

Still, I don't find the signal to noise ratio here much worse than
packet, all things considered. And some voice frequencies are even
worse than UseNet. The world is full if idiots, and ham radio is no
exception. If one can't deal with troublemakers, then ham radio is
certainly not the hobby to get into. Maybe stamp collecting?

>Well, Ed, I'm sorry to say that this is one area where the ARRL has
>failed.

I do not believe that ARRL has solved the enforcement problem. It is
still rather high on our list. I will point out that none of the other
radio services have been able to get much FCC enforcement action either.
I do believe that the ARRL has played a strong role in most of the FCC
enforcement that has occurred.

>For instance, the ARRL could work with the FCC to help build an evidence
>submission system, where hams could collect evidence (in accordance with
>FCC guidelines) and provide an affidavit as to its origin, etc. This
>information could then be filtered to the FCC for action.

>I believe that the evidence collected by hams must circumvent the AA,

>fingerprinting evidence I collected against a jammer in Barrington, RI
>(N1JBC) squashed by the OOC in this state. "He's just a kid, I'll
>straighten him out."

The AA is just such a system. If in some cases, "political" problems
truly were to take precedence over proper action, correct the problem.
Building a parallel structure will probably not work because, to draw on
a recent statement of yours, those who will join such a structure have
already done so.

If I were in the OOC's shoes, faced with a problem that could be
developed, sent through "channels" to the FCC, with what we both agree

is an uncertain outcome, or trying to solve the problem locally, I think I would opt for the latter as my next step.

If the OOC were truly able to solve the problem without the intervention of the FCC, I would conclude that his actions were exactly correct. How did it turn out?

WHAT???? HF lang??? just where in the rules does it say that I or anyone else can't use QSY, QTH or any other Q signal on bands other than HF? True they were devised as shortcuts for CW, but there is no rule that says you can't use them on other bands. I have even heard of police departments using Q codes on their UFH freqs. It is this elitist attitude more than any code or no code requirement that will bring this hobby down. I guess that is what makes one person an Amateur Radio Operator and another a HAM. Amateur Radio is a hobby, Ham radio is a community. Where do you fit in?

73,
by the way you seem to have no restrictions on using 73 outside of HF.

>Considerate, Loyal, and Friendly people.

This seems to be a problem of society, at least by my recent experiences at the local shopping mall. I can safely state that ARRL does not encourage this sort of behaviour. As a matter of fact, it is ARRL that promotes the very Amateur's Code (not the CW code -- the other one!) that you discuss.

>I see people that look down on people just becouse there are a No Coder.
>When it's ALL Class's that make us look bad.

This happens. I have and will always publically and personally state that we all had the opportunity to influence the outcome as the no-code license was being revised. Many of us, including ARRL as an organization, offered our input to the FCC. But once it was done, it was the FCC that decided what the requirements are. IMHO, all people who pass an examination are are issued callsigns by the FCC are hams and the ARRL will, by policy, treat them as such. Unfortunately, there is not much a national organization for Amateur Radio can do to combat local and personal rude behaviour. As for the obcenities and such, see my comments under my other post. :-)

>Like my last message. You said the ARRL has no power no more. So why

>if the FCC or who ever don't do anything to keep people in line. Why
>Bother.

>Well Ed am I right? :)

No, Bob, I don't think you are. I respect and agree with your opinions that 4-letter words, rude behaviour and malicious interference are hurting Amateur Radio. I did not, however, say that the ARRL has no

power any more; in fact, I pointed out a number of things that ARRL has done in these areas, in addition to some of those that have not worked. When you withdraw support for the organization, you withdraw support from both the bad and the good.

If ARRL is doing some good in these areas, and I offer that it is, does not withdrawing support represent the step that makes it more likely that the very actions you decry will continue unabated? If the ARRL stops working with the FCC to step up enforcement, what would the FCC assume about Amateur Radio? If your criteria to support ARRL is that it must be perfectly successful in all that it does, we will certainly never have your support. If you choose to, however, your support can help make certain that what ARRL can do will be at least a little bit better, and a little bit more effective.

Hello,

I have about 1200 old tubes for sale. They are all in boxes and most
are new. I am interested in selling the whole works in one lot, or
possibly breaking it up if it is worthwhile.

If you are interested, please send an EMail to tharold@portal.ca, or
Terry.Haroldson@Teradyne.com

and I can EMail you a complete list.

Terry.

Technical books for sale!

Directional Broadcast Antennas - Jack Layton TAB Books 1974 1st
printing $19.95 plus shipping 209 pages nice shape!

RAD LABS wave forms. yea it's the red edition! Trade or?
RAD LABS Pulse Generators Yepper! This is the red volume also! Trade
or?

RAD LABS Vacuum tube amplifiers... The dover paper back edition $18.95
plus shipping

Radio Telephony For Amateurs by Ballantine 1922 has some wear. great
book! trade or ? This book is really cool as many of the early broadcast
stations started out as amateur stations in the era. If you wanted to
build a replica early broadcast station transmitter etc.. this would be
a fine book to own! TALK TO ME ON THIS!

The Chord Of Steel
bio of Alexander Graham Bell
Thomas Constain
1st printing 1960
some wear to dj
tight binding
$34 plus shipping

Radiotron Designers Handbook Yep! it's the big red one!
(Make an offer cash or trade for this hard to obtain book.)

Back issues of Hugo Gernsback's Modern Electrics from 1909 -1913.....
what issues are
you missing?

I have some extra qst magazines from the 20's and 30's get your
requests in

I have some copies of "RADIO" magazine from the 20's, 30's and 40's

I like new and antique microscopes, books about them (any age)

I love antique wireless and radio stuff, and telegraph and telephone
apparatus is wanted too!

we are also collecting books for electronics technology ref library so
let me know
what you have..
(in other words... I do more than sell books!)

need books on inventors!! will buy or trade

when in town come visit us and see the site for the new engineering and communications and computer museum!!

I suspect that these modules output square waves, which means that it's more than "full of harmonics", it _is_ harmonics. I'm no expert, but it seems to me that the FCC regulations regarding spectral purity of amateur transmitters come into play here, even at QRP levels.

Besides, it's not generally good relations with the general public to be QRMing all across the many bands. I suspect that a simple bandpass filter on the output would solve all of that, and save you from a punch in the nose from your neighbor.

> that "outsiders" (to the political/social clique) have virtually ZERO chance,
> even if the could get on the ballot ...

The record indicates otherwise.

First, to get on the ballot, you need only convince 10 members to
sign a nominating petition.

Second, incumbents are defeated by "outsiders" on a frequent basis.

When I ran for my current ARRL position, I was a total outsider. I had
never before been nominated or elected to any ARRL position, but I
was elected although I ran against an "insider" who had been both Vice
Director and Director of my division.

Other recent examples:

Frank Fallon in the Hudson division got on the ballot and defeated
the incumbent.

J.P. Kleinhaus in the Hudson division got on the ballot and
very handily defeated a most staunch pro-coder. (A
"beeper" in your terminology.)

Lew Gordon in Midwest division got on the ballot and defeated the
incumbent.

Mary Lou Brown in the Northwestern division got on the ballot and
defeated the incumbent.

Tom Frenaye in the New England division got on the ballot and
defeated the incumbent.

I could go on and on, but you get the picture.

At the present moment a total of 14 Director and Vice Director
positions (including the one I hold) are open for nominations and
elections. Jump in, it only takes 10 signatures to nominate a
candidate or be a candidate.

This is an old trick. There was a magazine article many years ago,
perhaps in "73" magazine, that told how to use the 28.322 modules.
They called them "Fireballs", and there used to be a "Fireballers"
net on that frequency.

I can vouch for this software.
I have been using it for a couple of weeks now and am going to take my
Tech test on the 9th of next month. The software has a nice feature that
allows you to track your test scores and watch your proficiency. I have
used a couple of web based practice tests to check my progress and
NuTest appears to be feeding me the right stuff 8). I have been getting
high 80s / low 90s on NuTest ... So if I don't have my license here
shortly ... Tony ... look out 8)

Hi,

Has anyone used RadioShack's hand-held VHF/UHF transceivers ?
They look quite affordable but I was wondering if they are good.
Thanks for any feedback.

- Anand

Mr Jon Bloom is right; there have been hams in Toledo area get the 10 names and get on the ballot over the years and they lost..

A simple thing, they were unknown and virtually unpublished.

Not wanting to gain fame on 14313kHz has its drawbacks :)

So, If you want it get on the ballot AND visit radio clubs all over your division, that is what it takes.

Yes, software is available that will allow you send and receive
1200 baud packet. Check out the following link:

http://dl0td.afthd.th-darmstadt.de/~flexnet/index.html

PC/FlexNet package written by Gunter Jost (DK7WJ) is a very excellent
software package. Download PCF.LZH and soundcard modem driver SM.LZH
by Thomas Sailer.

ARRL has no authority to enforce the rules, never has and never should. That's the FCC's job. If I understand you correctly, you're saying that since ARRL hasn't been able to convince the FCC to do as much enforcement as we all would like, we should just give up. That makes no sense to me. Rather, I conclude that we should only try that much harder. Of course, Bob, when people decide not to support ARRL in its efforts to encourage the FCC to step up enforcement, that only makes the ARRL's voice weaker and less effective.

>all our VHF, UHF, Bands away. You are giving them a Voice.

No, what *you* are concluding from what I said is that ARRL is powerless
and that AR is "dead meat." What I said is what I said. If you consider
the ARRL's setting up and maintaining the Amateur Auxialliary, supporting
the evidence gathered by these volunteers, having our DC attorney present
it to the FCC, following up as appropriate, to good effect in at least a
few cases as "powerless" and not worthy of support, you are making a
decision that is different than mine, for different reasons.

In my own personal work with the FCC, I worked closely with them as they
developed their newest RFI book, offering them all of the words ARRL has
ever written on the subject. I have worked closely with the FCC as they
are developing RF Exposure material, sending them a number of charts and
graphs of real antennas over real ground to make life a bit easier for
hams. It may be comforting to be able to summarize ARRL in a simple word
over a single issue, but in reality, things are almost never that simple.
Would you consider the examples I offered as also being "powerless?"
When you withold support from ARRL over one issue by resigning your

membership, you withold support on all issues.

In other areas, too, ARRL has been quite effective in the DC areana. In the recently introduced bill that would permit local law enforcement of CB RFI and other related areas, ARRL worked closely with the Congressman who introduced the bill to include specific language making it clear that this bill would not pertain to Amateur Radio. (The bill didn't make it that go around, but it will be back, in one form or another.) I offer that if everyone looked to find an ARRL shortcoming, and decided not to be a member because of it, then there would not have been any money to send Steve Mansfield to DC to work out the details.

If any one issue is so overwhelmingly important to you that must not support the organization, I can understand that. (I feel that way about a few organizations myself, even though I know they do accomplish some good). But I offer that the decision to do so should not be made lightly, and that one issue should be important enough that you are willing to give up those other areas.

>I guess like you said, you can't Stop it. So that, that, Right. There
>no way it can get any better and when the code is droped. Amateur Radio
>Will be just like the CB. The ARRL will Die all but the Selling of
>Book's and Testing. Just another W5YI. OUT FOR THE MONEY! That's it.

In the first place, the ARRL is a not-for-profit organization. We have no shareholders to reap the profits; all proceeds from the sale of our books funds various membership services. We do have a paid staff of about 120. Our Book Team editors are a staff of 5. IMHO, ARRL should tend properly to the money, and does so. But there is nothing in it for me other than a fair wage for a day's work. If I wasn't paid, I would do a lot of it anyway (and do; I run around doing voluntary local club talks as much as a few hundred miles away). If I weren't paid, though, I must admit; I would do a lot *less* of it. :-)

Looking for a Filter Capacitor for the Drake R-4B Receiver. The Drake
Schematic ID is C-90. The Cornell Dublier (CDE) P/N is UPN10576.
This Cap is 5/16 diam and 3 inches high. It is a 4 section, Metal can,
vertically mounted with 4 tabs thru bakelite on the bottom to solder to.
The Capactance rating is: 3 sections at 100 MFD @ 200 volts
and 1 section at 20 MFD @ 200 volts.
If you have a Cap like this or can tell us where to purchase one in
order to revieve some older Ham equipment,it would be appreciated.

Have a few Motorola "pocket" chargers for HT600/MT1000 style radios left.

These are very compact desktop standard-rate chargers. They have a 12VDC adapter for power. One could easily substitute a cigarette-style plug for automobile use.

Units are new, still in Motorola packages.

$20 each, or 2 for $30

I got this back from EZ Clone Parent Company today Thought you Might like
to see it.. Think before you buy it

73 Bill
N3PZA

Hello Bill,
The "fix" you refer to would really be a new feature. The addition
of a help file would also be a new feature. I mentioned it would not be
a problem to put into a new version of EZ Clone. Unfortunately,
developement on the next version of EZ Clone is on hold. Currently,
there are negotiations going on between ACS and Kenwood as to the
direction EZ Clone will take from here.
The current version of EZ Clone is v.79. If you have an earlier
version then I will be happy to send you v.79. Otherwise, at this
point there is nothing new to send. We are all hoping a decision
happens soon so the future of EZ Clone can be established and
developement can continue.

I once asked for the information pack on reciprocal licensing agreements
.. BFD ...

Point is, I've been a dues-paying subscriber to QST for nearly 25 years and all I've
ot to show for it is a lot of frustration with the lack of responsiveness of the ARRL
to the needs of ham radio and the views of anyone with an eye to technical progress.

Take your sanctimonious attitude and stuff it, Herman ...

NO, they get the orders wrong because they use High Speed CW! After
all McDonalds IS a FAST FOOD chain...

What is this new mode spread rectum?
Used for rag chewing on a repeater?

C O M P L E T E S T A T I O N

I am selling my entire station. See it, test it, buy it.

Icom 751 with CW filters, RC-10 keypad $800

Icom 2KL Solid state 5OO watt amplifier $1300

Icom AT-500 automatic tuner $350

Cushcraft A3 Beam $300

Alliance Ham rotor $100

40 foot crank up tower $300

The prices noted above are how I arrived at
the total, if you strongly disagree, tell me.

All messages answered. If you do not get an answer I did not either get
the message or you didn't.

Can anyone help me? I need to install a 2M mobile in my Ford Ranger.
It has a floor shifter, so a hump mount is out and there is no good
place for a dash mount either.

I remember seeing in some mag. a radio mount that was made out of a
peice of pipe that was bolted to the floor and you hung your radios off
platforms on the pipe.

Does anyone else remember this mounts and who sell them? Do you have
any other possible suggestions on mounting my radio?

Thanks and 73,

Boliver Allmon

2079. UK: Bury Amateur Radio and Computing Fair

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-01 00:00:00 UTC
From: keith@gxeap.demon.co.uk
Message-ID: <870445761snz@g8eap.demon.co.uk>
Source record: 192623
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc

[Replace the x with 8 for correct E-Mail Address]

Bury Radio Society is pleased to announce that they will be holding their ever popular Amateur Radio and Computing Fair for 1997 at the Castle Armoury in Bury on Sunday, the 14th September, 1997.

The Castle Armoury, known locally as the Drill Hall, is a New Venue for this Annual Fair, being just round the corner from the Former Venue (the Castle Leisure Centre). It is in Castle Street, just near the Parish Church and the Two Tubs Pub in the Town Centre of Bury, in easy reach of the Bus/Metrolink Interchange and Junction 2 of the M66 Motorway, from where it will be signposted. Talk In will be on Channel S22 (145.550 MHz FM) in the Two Metre Amateur Band. There will be ample Car Parking available near to the Castle Armoury on the Day, look out for the Stewards.

The Doors open at 10.30 am, half an hour earlier for Disabled Persons. There will be a multitude of Stalls and Exhibits covering all Aspects of the Hobby of Amateur Radio as well as Computing. There will be a Bring and Buy Area and a Prize Draw also.

There will be ample Seating Areas within the Hall so that Visitors may rest between going round the Stalls and Exhibits and to provide an opportunity to meet up with and chat with Old Friends. There will be Hot and Cold Food and a Licensed Bar available also.

For those Members of the Family not interested in either Amateur Radio or Computing, the Town Centre of Bury has many Attractions including the Castle Leisure Centre, which has many Sporting Facilities as well as two Swimming Pools, and the East Lancashire Railway, which often has Steam Trains running at Weekend as well as many interesting Exhibits, both these Attractions being less than two minutes walk from the Castle Armoury.

This year's Bury Radio Society Annual Amateur Radio and Computing Fair will be bigger and better than ever and certainly not to be missed.

Potential Exhibitors should write to the Exhibitions Manager, Bury Radio Society, c/o Mosses Centre, Cecil Street, Bury, Lancashire BL9 0SB without delay as there are only a few Stalls

still available.

The Bury Radio Society meets every Tuesday Evening at the Mosses Centre in Cecil Street, Bury, commencing at 7.45 pm and Everyone is welcome. The Mosses Centre is in the Town Centre just across the Car Park from the Dual Carriageway (Angouleme Way). Ring 0161 761 2079 during Office Hours for Directions to the Mosses Centre.

If you want to get nit-picky Bob, 73 is singular, not plural. 73 stands
for "best regards". If you say 73's you are saying "best regards'es".
And learn the difference between "our" and "are".

On VHF you have to make 73 plural (73s) or possessive (73's) HI HI
Apparently no one who adds a 's' to 73 has ever read the meaning of
73.

The idea that I can talk with people all over the world has always
interested me. I used to listen when I was a kid to SSB in the 20 and
10 Meter Bands. Repeaters also are a kick and I used to listen to a
very sophistocated system in my home town.

By the way, I see by your signature that you and I share another great
hobby too!

Take care...

Now Jeremi has a sense of humor !

A single frequency transmitter with a PLL..... :-)))

and Paul probably doesn't have a clue about crystals and multipliers.
:-(

I would recommend the Amateur Radio Handbook produced by the ARRL except
he would probably end up building a PLL based transmitter.... :-&

PAUL <-- get yourself a 9.458 crystal, then build an oscillator
followed by one doubler and two tripler amplifiers. Viola! you are
transmitting on 170.244 MHZ. A simple tweak of the oscillator tuning
capicator later and you are on 170.245 - sans modulation - cept maybe
some HUMMMMM if you don't have a stable power source..... :-)

Jim :-b

I just finished reading the thread between Jeff Herman and Jim O'Brien. It is bad enough folks can not deal with conflict but to do so in front of a national stage is a disgrace. Guys, settle it.

We have had this little boy testosterone fights in Ham Radio before. Right after WWII, there were duals on 160m, jamming AM radios on cars! In the seventies, we had the repeater wars in Southern California (I believe the 160m battles were in S. Cal as well). Nothing that the CBers have done even comes close to the stupidity that hams have done (due that CBers generally don't have the knowledge to do so).

Given that our society is going to hell, so are we. I am just surprized that we don't kill each other. Guess we don't live close enough.

OTOH he *may* be right, it is a matter of guts, no one has the stomach
to talk to him... on the air or elsewhere. elsewise, it may be that real
hams have too much self respect.
whatever.
And the next comment of his will be "why are you insulting me, I never
did that to you..." well in fact he does, every time he spams with some
sort of his typical slurs at *all* hams.
I am proud to be a ham, we may have our klunkers, but by and large, the
hams I meet on the air are just great.

:burt filter back ON.:-)

Hello all,

Once again I'll be out Calling CQ on 50.400 AM

Sat and Sun..10:00-20:00pdt (17:00-03:00)z

I'll call CQ on the hour and on the half.

Last time I had a tree trimmer running his grinder all weekend.
Had too much QRM and s9 of ac type noise.

There were a few opening though.

Lets hope for a good "open" weekend.

If you want more details on the 50.400 AM test Check out my home page.
http://www.geocities.com/Hollywood/5860/50am.html

Also I'm running a Swan 250/60 watts/Vertical ar-6/

There is a lot of info there.

Thanks everyone!

Hello Cathi

I have found out the hard way about running antennas on the roof. This is generally an invitation to the kind of interference you are experiencing. Also, the difference in power output from the 757 GX and the L4B is only about 10db. I have also found that the additional 10db can cause a lot more headaches with interference. 99% of the time high power is simply not needed to maintain communications. If you husband is a rabid DXer maybe he can justify it, but generally the increase in output is not worth all the collateral hassel. There are different fixes for every problem you are relating. The use of ferrite beads and choks in all the connections to your home theater set up would probably help. moving the antenna as far from the house as possible would definately help and going to the best coax available and maybe a common mode filter could do the trick. You husband should understand what all of this is.

My wife is my biggest critic when it comes to me interefearing with anything in the house. She lets me know as soon as she notices it and I get to work to track it down. I have been able to make the house and all its electronic goodies free from RF interference other than cable channel 18 while running two meters. Have not cracked that as yet. Also If you

are getting this level of intereference problems, what are your neighbors getting?

Good Luck

2097. Suggestions wanted as to how to remove a *really* big antenna

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <5rtimk$6m7@news.Hawaii.Edu>
Source record: 192641
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna

With the ceasation of the VLF OMEGA navigation radio transmitter here
on Oahu, the State of Hawaii is confronted with the task of having to
remove this extraordinary wire antenna system. The antenna consists of
six 1 1/4 inch cables, each 7,500 feet in length, stretched between two
ridge tops, with a valley 2,500 feet below. Each cable weighs 30,000 pounds.
The new H-3 freeway runs through the valley floor.

The state is considering two methods of removal:
1. Explosive charges would be placed by helicopter off the center of
each cable which would cut each cable in such a way that no damage
would occure to the freeway 2,500 feet below. The cables would then
be cut up and hauled away (no easy task since the valley floor is
a dense rain forest). The state does not favor this method.
2. A winch would be attached to each cable anchor and each cable would
be slowly lowered to the valley floor. This method is supposed to be
cheaper and less harmful to the forest below. A thick rubber mat would
be placed over the freeway to prevent damage. The cables would then
be cut up and hauled away.

An event of this magnitude is apparently so rare that there are no
fixed ideas as to how to proceed. If any of you would like to contribute
your thoughts, email me (or post them on here) and I'll forward them
to the the state engineers heading this task.

I have been having a repetitive noise problem that sounds like the points of a car but I am set up in my house in the country. It seems to be coming from the house wiring. It causes really annoying static from 150 Khz to about 10Mhz on several radios. I have unplugged everything in the house but it is still there. The frequency of the noise seems to be about 60 Hz. I have a long ground rod just outside the room. I have heard about DSP based filters that can help with repetitive noise like this but don't know were to find one. Any ideas??

Thanks for any help

I would welcome the end but James feels the need to follow me from NG
to NG making rude comments (did you read what he had to say about my
girlfriend? - she's about ready to rip him apart).

Also, please don't confuse internet with amateur radio. On this NG
there are non-hams, and hams not using callsigns; that certainly
seperates this forum from our amateur hobby/service.

>We have had this little boy testosterone fights in Ham Radio before.
>Right after WWII, there were duals on 160m, jamming AM radios on cars!
>In the seventies, we had the repeater wars in Southern California (I
>believe the 160m battles were in S. Cal as well).

I don't believe such conflicts have anything to do with hormones, Greg.
Rather, having such a diverse hobby as we do, and having the ability
to touch so many folks over such vast areas via a mic or key, there is
bound to be friction. When a person feels his stance is the correct
one, he can either swallow his pride and walk away, or fight for
what he believes in. You focus on the conflicts, but I'd suggest
instead considering the untold number of non-conflicts which occure
because someone QSY's or someone else changes mode.

Give that there are tens of thousands of hams on HF daily all within
reach of each other, and only 3.75 MHz available, I'd say we're doing
quite well.

>Nothing that the CBers
>have done even comes close to the stupidity that hams have done (due
>that CBers generally don't have the knowledge to do so).

I don't believe CB'ers have a national identity - a national charter,
such as we do. The reason for our existance is spelled out quite clearly
in S97.1. Given these obligations that we all must follow, we can't hide
behind a mic confining ourselves to just our shack; we have to interact
in ways CB'ers don't, and as a result, difference of opinions will arise.

>Given that our society is going to hell, so are we.

Yikes! That's pretty negative, Greg. Start focusing on the good aspects
of society and ham radio - otherwise you're going to get heartburn.

I'm going to go have a beer and watch the sunset now.

Interrest by making $50,000 ?

HERE"S A FUN WAY TO MAKE SOME EXTRA CASH!!!! WHO KNOWS YOU MAY EVEN
GET RICH!!!!!!!!!!!!!!!!!!!!!!!!!!!!You gotta be crazy! How on earth
do you think you can buy 50 grand for lousy 5 buck? Well, that's what
I was wondering, too until I came across this letter.First of all,
IT'S PERFECTLY LEGAL!(Call 1-800-725-2161) if you have any questions
about the following opportunity to make $50,000.00 and that probably
WITHIN LESS THAN TWO MONTHS!Well, here it goes:A little while back, I
was browsing these newsgroups, just like you are now, and came across
an article similar to this that said you could make thousands of
dollars within weeks with only an
initial investment of $5.00! So I thought, "yeah, right, this must be
a
joke," but like most of us I was curious, so I kept reading. Anyway,
it said
that you $1.00 toeach ofthe 5 names and addresses stated in the
article.
You then place your own name and address in the bottom of the list at
#5, and
post the article in at least 200 newsgroups. (There are thousands) No
catch,
that was it.I knew that that was the opportunity I had waited for a
long
time.I thought it was about time that the money of the world gets into
the right hands! OURS, right? I never had a doubt that this thing
will
actually work and even if it didn't, what were 5 stamps and $5.00 for
a
try? As I mention before, like most of us I was a little skeptical and
a little worried about the legal aspects of it all. So I checked it
out
with the US Post Office (1-800-725-2161) and they confirmed that it is
indeed
legal! Now, that's how your story WILL sound like, too if you
participate:Well GUESS WHAT!!... within 7 days, I started getting
money in
the mail! Iwas shocked! I still figure it would end soon, and didn't
```

give
it another thought. But the money kept coming in. In my first week,
I
made about $20.00 to $30.00 dollars. By the end of the second week I
had
made a totalof over $1,000.00!!!!! In the third week I had over
$10,000.00
and it's still growing. This is now my fourth week and I have made a
total
of just $42,000.00 and it's still coming in....Let me tell you how
this works
and most importantly, why it works...also,make sure you print a copy
of this
article NOW, so you can get the information off of it as you need it.
The
process is very simple and consist of 3 easy steps:STEP1: Get 5
separate
pieces of paper and write the following on each piece of paper "PLEASE
PUT ME
ON YOUR MAILING LIST." Now get 5 $1.00 bills and place ONE inside each
of the 5 pieces of paper so the bill will not be seen through the
envelope to
prevent thievery. Next, place one paper ineach ofthe 5 envelopes and
seal
them. You should now have 5 sealed envelopes,each with a piece of
paper
stating the above phrase and a $1.00 bill.What you are doing is
creating a
service by this. This is perfectly legal! Mail the 5 envelopes to the
following addresses:

#1 J. A. Gang
970 Paces Circle #300
Apopka, FL
32703

#2 T.J. Kashin
2009 Hollyhock St
Pekin, IL 61554

#3 Fred Dufour
1596 39avenue
Montreal, QC
H1A4A2, Canada

#4 Robert Wisowaty
1341 Kane st.
La Crosse, WI 54603

#5 Adrian Silva
Tepozteco 102A
Cuernavaca MOR 62150

Mexico

STEP 2: Now take the #1 name off the list that you see above, move the other names up(2 becomes 1, 3 becomes 2, ect...) and YOUR NAME as number 5 on the list.STEP 3: Change anything you need to but try to keep this article as close to the original as possible.
Now, post your article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you need is 200, but remember, the more you
post, the more money you make!Don't know HOW to post in the newsgroups?
Well do exactly the following:**REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!!BUT YOU HAVE TO POST A MINIMUM OF 200****If these instructions are too complex to follow, try Forte's "Free Agent." It is freeware for non-commercial use.To download it, simply use a search utility and type "Forte Free Agent". You should be able to find it.**That's it! You will begin receiving money from around the world within days! You may eventully want to rent a P.O. box due to the large amount of mail you receive. If you wish to say anonymous,you can invent a name to use as long
as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**Now the Why part:This entire principle works because it is in a
format of an upside down tree with thousands of branches. Everyone below you
will see to it that the tree continues because they want to get money. Those
below THEM will continue because THEY want to get the cash ect.Out of 200
postings, say I receive only 5 replies (a very low example). So then I made
$5.00 with my name at #5 on the letter. Now, each ofthe 5 persons who just
sent me $1.00 make the minimum 200 postings, each with myname at #4 and only
5 persons responds to each of the original 5, that is another $25.00 for me,
now those 25 each make 200 minimum post with myname at #3 and only 5 reply each, I will bring in an additional $125.00!Now,those 125 persons
turn around and post the minimun 200 with my name at#2 and only 5 replies
each, I will make an additional $626.00! Ok, now here is the fun part, each
of the 625 persons post a minimum of 200 letters with my name at #1 and they
each receive 5 replies, that just made me $3,125.00!!! With a original
investment of only $5.00! AMAZING! And as I said 5 resonses is actually VERY

LOW! Average is probable 20 to 30! So lets put those figures at just 15
responses per person. Here is what you will make:at #5 $15.00 at #4 $225.00 at
#3 $3,375.00 at #2 $50,625.00 at #1 $759,375.00. When your name is no longer on
the list, you just take the latest posting in the newsgroups, and send out
another $5.00 to the names on the list, putting your name at number 5 and
start posting again. The thing to remember is that thousands of people all
over the world are joining the internet and reading these articles everyday,
JUST LIKE YOU are now!!And this will go on and on and on...get the picture?
Well, there's 5,000,000,000 people in the world and most of them will
eventully end up being hooked into the internet. So there are virtually
unlimited resources. Of course this will work the best at the very
beginning so the faster you post, the better for YOU!So can you afford $5.00
and see if it really works?? I think so! People have said, "what if the plan
is played out and no one sends you the money? So what! What are the chances
of that happening when there are tons of newusers and new honest works?? I
think so... People have said, "what if the plan is played out and no one
sends you the money? So what! What are the chances of that happening when
there are tons of new honest users and new honest people who are joining the
internet and newsgroups everyday and are willing to give it a try? Estimates
are at 20,000 to 30,000 new users everyday, with thousands of those joining
the actual internet. remember, play FAIRLY and HONESTLY and this will work.
You just have to be honest.Make sure you print this article out RIGHT NOW,
also. Try to keep a list of everyone that you sends you money and always
keep an eye on the news groups to make sure everyone is playing fairly.Remember
, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea
to make the money!!GOOD LUCK to all and pleas play fairly and reap the
huge rewards from this,which is tons of extra CASH. **By the way, if you try to

deceive people by posting the messages with your name in the list and not
sending the money to the rest of the people already on the list, you will not
get as much. Someone I talked to knew someone who did that and he only made
about $150.00, and that's after seven or eight weeks! Then he sent the 5
$1.00 bills, people added him to their list, and inn 4-5 weeks he had over
$10k. This is the fairest and most honest way I have ever seen to share the
wealth of the world without costing anything but our time!!! You also may
want to buy mailing ande-mail list for future dollars.Please remember to
declare your extra income. Thanks once again......

How do you get your head AND ego in the same room? And you don't have any radio expertise at all. You just post other people's articles like a little net parasite. And you stay on the Usenet WAY too much to ever construct or build anything. All you do is tear down boy. Better pay some attention to that yellow devil boy. If she finds out about you and Mike she might have a Saigon flashback.You VC?

That trash is way overpriced. 751's go for 500$ Burp. All that usenet
crying and you list such a crappy station. Maybe if you got some real
gear AND a personality you could make some contacts.

2111. Re: Suggestions wanted as to how to remove a *really* big antenna

>>> How To Turn *ANY* Classified Ad <<<
>>> Into A Continuous Money Machine! <<<

Want To Know The Secrets Of Super-Selling Classified Ads?...

Well then, here's how to market ANYTHING using low-cost --
even FREE -- tiny classified ads. With these little-known secrets,
you can easily double or triple your response!

Imagine yourself opening your mail ... or listening to your
messages ... and being flooded with response!

It can happen to you.

I know because it continues to happen to me every single week!

There's something you should know if you want to make real
money from your classifieds. It's the #1 key to super-success
with classified ads.

The secret is to create an ad that's so strong -- so compelling --
that your prospects find it simply, irresistible!

Classified ads are the greatest advertising bargain in the world!

One good ad can attract hundreds of responses -- all from people
interested and enthusiastic about what you offer. Many of these
folks can't wait to send you their money in exchange for your
product.

To get outstanding results like this, you need to know the "inside"
secrets. NOW YOU CAN. I have something to show you...
some valuable secrets. Never before have these break-through
ideas been so easy for you to master -- and profit from. In fact,
I'm willing to bet that ...

You'll never write another classified that doesn't pull a winning
response!

"Classified Magic ... How To Make Your Small Ads Pay Off Big!"
is your road map that virtually guarantees your success as a
classified ad writer and marketer.

****
With These Valuable Ideas,
You'll Very Quickly Discover ...
****

- How to write a classified that readers find simply irresistible ...
- The one item in your ad that will make you more successful
than you've ever been before ...
- How to find the money-making ads in any publication ...
and how to duplicate their success for yourself ...
- Secrets of selling virtually any product or service with classified
ads.
- How to find the right "place" for your ad to ensure the best
possible results.
- The fastest method for creating a super-responsive classified ad.
- Why 98% of all classified ads fail ... and why that will never
happen to you.
- The one strategy that guarantees you the highest profit in any
any market ... (this single strategy alone is worth, at least, ten
time the price of the guide)
- How to create headlines that have an almost "magical" pull ...
- How to multiply your profits once you have a winner ...

But that's not all ...

I've discovered a secret so compelling ...

I LITERALLY GUARANTEE
YOU'LL BE SUCCESSFUL WITH
CLASSIFIED ADVERTISING!

****

>>> ONE YEAR GUARANTEE! <<<

Try
"Classified Magic...How To Make Your Small Ads Pay Off Big!".
If you're not totally overwhelmed and delighted by the wealth
of money-making information it contains, simply return it in
good condition within one full year.

I'll refund your money ...
FULLY AND PROMPTLY ...
NO QUESTIONS ASKED!

****

With this key information, you'll easily master the secrets of
creating power-packed ads that get BIG RESULTS ... even if
you've never written any kind of ad before!

Wait -- there's more! You also get:

- The 99 reasons people buy ...
- How to ensure each word has maximum pulling power ...
- 7 ways to draw attention to your ad ...
- The 3 key ingredients of every successful classified ad ...
- Top copywriters "inside" secrets to creating ads that
sell - quickly and easily ...

BONUS #1
Order NOW and you also get my free marketing consultation services on any one sales letter, flyer or brochure that you are using now. You'll get lots of tips and fresh marketing ideas you can profit from.

BONUS #2
With your order, you also get my collection of uniquely created ads for over 10 types of businesses. Use any of them to get an overflow of response for yourself!

****
Take A Look At What Other
Readers Have To Say:
****

" ... one of the best investments I have made in my advertising endeavors. The information is not only timely and informative, but it actually works. I learned more from your book than all those $39.99 to $200.00 courses you see on all the informercials."
- Cheryl A. Mauldin
Diaz, AR

"Thanks you for turning me on to your book. It has proven to be invaluable in my business. The responses have increased and I was able to increase my income dramatically. Again, thank you very much!"
- Gunter Weissmann
Ontario, CA

"I was so payy to order the information from you. It turns out, that I received much more detailed information that I had expected. My business, shortly thereafter, began to really take off. The only difference was the way I wrote the ads."
- Karyn Daniels
Austin, TX

****
-PRINT AND-
-CUT HERE-
****

Your Zero-Risk Order Form
__ Yes, rush my copy of "CLASSIFIED MAGIC
.. How To Make Your Small Ads Pay Off Big!"
plus the 2 FREE BONUSES mentioned.
I understand that if I'm not completely delighted with the profit-making information it contains. I can return it anytime, within one full year. On that basis, I enclose my money order, or check for $29.90 USD ($24.95 plus $4.95 shipping and handling).

None. When purchasing study materials, I even went out of my way to avoid the ARRL publications in favor of the Gordon West books and tapes.

Re-read it again, but from the begining this time. The header says that
the newsletter is transcribed by Dale Cary, WD0AKO. I just distribute it,
and if all hell breaks loose at the ISP, (like last weekend), it goes out
with typos, errors, coffee stains and all.

You're all lucky that it got posted up at all. Did anyone wonder why #40
was a week late? Blame good old AGIS for jerking around our ISP.

The noise could be coming in from your powerline, or for example
an eletric fence nearby. The first test I suggest you make is
turning off the main circuit breaker, and seeing if the noise goes
away. If the noise goes away when you turn off the power, you'll
have to turn off sections of the house until you find the section.

If it's not in the house (btw, to test for noise in the house, you do
need a receiver running off a battery), then you can look around
the neighborhood. Unfortunately finding the source can be a
pain literally. If you're all alone on the end of a power line, your
only hope for a cure is the power company finding the source.
If you aren't alone, MFJ and JPS both make noise cancellation
devices which can be used with up to one hundred watt
transceivers. They basically compare the signal on a short
piece of wire to that on your main antenna, and assume that
any signal the same should be cancelled if automatic, or you
do the adjusting if doing it manually. For most people they
are of use if the noise won't or can't go away, with the JPS
unit having been around longer and demonstrated at lots of
hamfests.

The RS wireless mike kit can be modified to transmit on 170.245.
Instructions on how to do this can be found in the book NOW HEAR THIS
by Winston Arrington and CRB use to carry it. The schematics Mr.
Arrinton discusses in detail are the same basic circuit of the RS kit.
BTW - The book gives schematics to modify a xmitter from 30-300mhz.

From Tad Cook, K7VVV
Seattle, WA August 1, 1997
To all radio amateurs

SB PROP ARL ARLP031
ARLP031 Propagation de K7VVV

Solar flux has been settling down from last week, but several coronal holes have moved into position, and are probably the cause of geomagnetic upset on earth along with rising K and A indices. A coronal mass ejection on July 30 is a likely suspect as well. Look for marginal conditions this weekend as a result.

Watch for a return of the recent activity about 28 days later. Based on recent activity, solar flux is expected to stay around the low seventies.

Look for good conditions after the A and K indexes quiet down. For an updated reading tune to WWV at 18 minutes after the hour, with new K indices at 0318, 0618, 0918, 1218, 1518, 1818 and 2418 UTC. K indices below three mean stable conditions, and above three they do not. You can also get the latest WWV forecast over the phone by calling (303) 497-3235.

Sunspot Numbers for July 24 through 30 were 44, 65, 58, 53, 26, 24 and 12 with a mean of 40.3. 10.7 cm flux was 78.7, 80.4, 76.6, 74.5, 74.2, 72.7 and 71, with a mean of 75.4, and estimated planetary A indices were 10, 5, 4, 6, 5, 3, and 7, with a mean of 5.7.

Sounds like a touch lamp could be the problem. Keep your eye out for
one in the neighborhood. Try to borrow a shortwave portable and use it
to df the problem.

2126. One Ham's Prediction on Sunspots/Global Cooling

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-02 00:00:00 UTC
From: Mike Flaugher N9LLX <flaugher@thepoint.net>
Message-ID: <01bc9f7a$d831cc60$bea2f6ce@flaugher.thepoint.net>
Source record: 192524

All right, here it comes. Crazy Mike is at it again. I try to hold my peace but I just can't stand it anymore. Doesn't ANYBODY see that Earth temperatures have started cooling, the sea levels are turning toward decline, and cloud cover is going nuts around the globe? Does no one see the correlation between the weather events of the last three years and what's happening (or not happening) with sunspot cycle 23? We are dead in the water for solar flux, folks, and we just went another couple of days with NO spots on the sun. Granted, spots are just an artefact, but they ARE an indication of what else is happening on ole sol. We SHOULD be well into a big increase in flux and spots by now, a year and three months into the new sunspot cycle, especially since everyone and their pooch predicted that Cycle 23 would be the Grand Poobah of all cycles. Well, 23 is a flop so far, which is really wierd for an odd-numbered cycle. This hasn't happened since the late 1790's, two decades before the Year Without a Summer in 1816.

I believe another solar minimum event like the Wolf, the Sporer or the Maunder may be coming. Three times in just the last thousand years alone the sun has gone into a period of quiescence and (coincidentally) the Earth has been hit with global COOLING that has brought the same patterns of drought/flood/harsh winters we're beginning to see acelerate around the world today. Just look at the number of climate records we're breaking that go back to the early 1800's or even to the Little Ice Age/Maunder Minimum itself 300 years ago.

I've been a ham radio operator 31 years, and I'm used to observing sunspot cycles as well as dealing with oscilloscopes, spectrum analyzers, and fourier analyses. I look at the waveshape of 14-C and 10-Be isotopes extracted from two thousand years of ice cores and tree rings and what I see is another cold epoch on its way. In fact, we SHOULD have had one begin around the turn of the 19th century, but one of the components of the climate waveform (it's probably tri-modal and somewhat unstable) pushed the sun back up again for a global warming hump that lasted through the 1800's. I don't see this happening again. Call me a boob but I think everything is lining up for another big dip in solar activity. It HAS already started, and what's outside our windows is the evidence.

In the 13th century, this thing drove the Vikings from America and destroyed the Anastazi culture as well as bringing Medieval Europe to its knees. The most recent episode, the Maunder Minimum, caused or helped to cause the General Crisis of the 17th Century (worldwide famine, rebellion and social collapse). Germans are finding out today, the hard way, just WHY the old, original Oder River dikes were built so far back. I'm not saying that the weather and the sun will completely wreck our world, but it's NOT something we should turn our backs on. We DO have much advanced science today, especially in agriculture, but we also have many, many more people

on the planet now than the last time this all happened.
What's crazy to me is how The Environmentalists refuse to give up insistence on man-induced global warming. Sure, the theory may be correct about CO2, but we're understanding now that man's efforts are just a drop in the bucket comapred to the power of the sun. Some Enviros are running around like chickens with their heads off claiming "data calibration errors" and "bad satellites" while desperately cashing in on anything and everything governments will let them get away with before the roof caves in. The truth, to me, is that a climate shift is coming, and we'd better get ready for some major crop production problems in the coming decades along with some big-time layouts of disaster relief funds. Over the course of the next decade, we will drop our global warming fears like a hot (or not-so-hot) potato. If this cycle to come is anything like the Wolf, Sporer or Maunder, we may not see real weather mildness throughout the ENTIRE NEXT CENTURY!
I am NOT a professional scientist. I am an amateur. Please understand this as I give my prediction for the future. I think we're going to see some climate "stabilization" or slight improvement for the next five or six years as we get into the peak (although a low peak) of sunspot cycle 23. Following that, it's Katie bar the door. I think by 2004 or so we're going to see some real global cooling with strong North Atlantic blocking and very influential "ridging and troughing" patterns on the continents; much more so than now. Strong droughts will form under/near the pressure ridges while the low pressure troughs will act as conduits for polar/arctic air and lots of rain. I do NOT think alpine ice caps are going to melt anytime soon.
What really sinks my heart is that so many good scientists are starting to see this coming, but are afraid to say a word out of fear of The Environmentalists. This is really sad. Oh well, I don't mind going out on a limb like this if it sparks some more very needed discussion.
Hey, Ray, what'ya think of this tri-mode thing?

Subject: [CW] NAVY-MARINE CORPS MARS CW IS BACK!!!!
Date sent: Sun, 27 Jul 1997 01:09:12 -0500

HELLO AND THANKS FOR READING

TONIGHT WAS A NIGHT WORTH WAITING FOR.

IN A RECENT CHIEF NAVY-MARINE CORPS BROADCAST, THE CHIEF NAVY-MARINE
CORPS
MARS ANNOUNCED THAT DOD HAS AUTHORIZED CW NETS AGAIN. IN SHORT ORDER,
WE
HAVE FOUR NETS WORKING AGAIN IN LA. WHILE I CAN NOT GIVE OUT THE
EXACT
DETAILS, THOSE IN SOUTH CENTRAL STATES WILL HEAR ONE AT 2100 CDT JUST
A FEW
KHZ ABOVE THE 80M HAM BAND. AFTER A WEEK OUT OF TOWN, IT WAS VERY
NICE TO
HEAR A MESSAGE PASSED BY CW FROM AN ANOTHER MARS STATION TO A
NAVY-MARINE
CORPS STATION FOR RELAY ON THE DIGITAL NETWORK.

NO I AM NOT JUST HUNG UP ON CW FOR THE H__L OF IT. I WAS NECOS OF A
NAVY-MARINE CORPS VOICE (SSB) NET EARLIER THIS EVENING AND COULD NOT
HEAR MANY OF THE STATIONS ON THE NET. WITH SIMILAR CONDITIONS (LOCAL
THUNDERSTORMS) I WAS ABLE TO COPY A MULTI ADR MESSAGE SENT THREE HOURS
LATER VIA CW. IT IS REALLY TRUE THAT CW CAN GET THROUGH BETTER THAN
SSB.

YES I KNOW THAT NOT ALL HAMS CAN READ CW THROUGH THE NOISE, BUT THOSE
WHO CAN FIND IT EASIER THAN SSB. WE HAD THE MESSAGES PASSED WITH SOME
CHAT
TIME AFTER THE NET. I HAVE SEEN VOICE NETS TAKE LONGER TO HANDLE LESS
TRAFFIC. MAYBE THE WISDOM OF USING A SYSTEM THAT WORKS MAKES SENSE
AFTER
ALL.

CW WAS NEVER DEAD AT K5KV AND IS REVIVED AT NNN0LGN.

73

BENNY

DIVISIONAL NEWS

Last week's Trash and Treasure, hold at the Dural transmitter site, was reasonably succesful. The weather was overcast with a slight drizzle early in the day, which may have put off some participants, but it Improved to be a bright and sunny day after lunch.

Some country members came along, enjoyed themselves and left with bargains, as did the city members. Thanks to those who made the effort to attend.

A considerable amount of surplus gear went at astounding prices -- you should have been there!

The next Trash & Treasure will be held at the usual venue of Amateur Radio House In Parramatta, on Sunday 28th September.

--Pat Leeper VK2JPA, WIA Trash & Treasure Office

DURAL COMMITTEE MEETING.

Dural Committee Members are reminded that the next committee meeting will be held on Sunday the 24 th August at VK2WI after the Morning broadcast.

--73 Tim VK2ZTM - for the Dural Committee.

REMEMBRANCE DAY WEEKEND

A reminder that the Remembrance Day Contest will be held over the Weekend - Saturday the 16 th and Sunday the 17 th August. The R D opening address is conducted just before 6 pm Saturday and is combined with a special broadcast which commences at 5.30 pm. This broadcast replaces the Sunday morning broadcast.

The Sunday evening broadcast is as normal at 7.30 pm.

Your Support of the Remembrance Day Contest is invited, even if you only end up making a few contacts. Its your operation and submitted log which will help VK2. We need your score!

You'll find the contest rules in the July issue of Amateur Radio magazine, also on Internet; just go to the VK2 Division home page at http://marconi.mpce.mq.edu.au/wia/ and follow the links in the "What's New" section

WICEN NEWS

Don't forget that next Saturday is the Annual General Meeting, to be held at the Hornsby RSL Club, starting at 11am. As before, it was chosen due to its proximity to a major railway station, and its convivial atmosphere; it is also reasonably central to all members. It will be preceded by an RCOs' meeting, to appoint two Deputy State Coordinators, the nominations for which having been received by the Management Committee. To whet your appetite (apart from the bistro and bar), there will be a practical demonstration of the GRN system, and as an added inducement some door prizes will be given away, namely gift vouchers upon a well-known electronics retail chain and a year's membership of WICEN. Furthermore, Simon Trotter VK1AUS will be speaking on his experiences in RAYNET -- WICEN's equivalent in Great Britain -- and the ACT.

A major event this month is the annual City to Surf Fun Run, next Sunday; as usual, David Shaw VK2TIP will be coordinating this august event, and fifteen or so volunteers are required. David can be contacted at home on (02) 9588-5061, at work on (02) 9364-8631, or mobile on 0412-000-383. Those not lucky enough to snaffle a free meal at the Finish can join a BYO barbecue at the clubrooms of the Waverley Amateur Radio Society. Incidentally, the families of at least two WICEN participants will
be jogging along, so what about the rest of you?

Central Coast WICEN would like to invite interested members to the Shahzada (pronounced sher-za-da) Horse Endurance Ride, over August 25-29th. This is the premier event on the Endurance Riders calendar, and is a 400km, 5 day horse endurance test conducted in the area around St Albans, north-west of Sydney. To provide effective communications for this event, we require generally fit people, with a car,

camping gear and radio equipment. We also require operators to be reliable, following specific instructions to the letter. If there are sufficient
numbers, then the job of Co-ordinator will be rotated on a daily basis, providing excellent training and building both personal skills and team development. It is ideal for anyone wishing to improve their WICEN skills, and non-WICEN people are also welcome. Comprehensive briefing notes will be made available for those interested. At the moment, we have just one confirmed starter, and confirmation of participants must be given two weeks in advance for logistical purposes.

Even if you can help out for just one day, please contact the organiser, Ian Rosser VK2XB, on the Heathcote or Gosford repeaters, at home on (043) 74-1077 after hours, or mobile on 018-295-545. Ian says, half-jokingly, that anyone who owes him favours should assist.

If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on 015-097-217.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

SPACE NEWS

PHASE 3D SEPTEMBER LAUNCH DOUBTFUL

The September 30 launch of the Phase 3D Amateur Radio satellite was put in grave doubt this week. It appears extremely unlikely that Phase 3D will be able to meet revised mechanical specifications in time to fly on schedule aboard the Ariane 502 rocket. AMSAT officials are holding out a glimmer of hope that the Ariane 502's schedule will slip just enough to let Phase 3D catch up again, but those chances are considered very slim.

In a statement, AMSAT called the turn of events ''very bad news.'' AMSAT-NA President Bill Tynan, W3XO, confirmed that, in order to include Phase 3D, the Ariane 502's overall launch schedule would have to slip a month or two. But, he said, ''if it goes on schedule, we won't go on
'502.''

The latest setback for the next-generation Amateur Radio satellite came when the European Space Agency (ESA) significantly increased its estimate of vibration levels the Phase 3D payload would be exposed to aboard the Ariane 502. The revised estimates mean AMSAT will have to move fast to make structural changes in the Phase 3D spaceframe in order to withstand the anticipated rougher ride. Phase 3D Project Leader Karl Meinzer, DJ4ZC, told ESA in mid-July that the work required by the agency's new information would prevent AMSAT from delivering the spacecraft to Kourou, French Guiana, by the specified August 10 date.

AMSAT brought in an independent structural engineer to review the spacecraft's design and construction. Since his report, AMSAT said that ''substantial effort has been taking place at the Phase 3D Integration Lab in Orlando, Florida'' to make and install the recommended structural reinforcements. That work continues.

If the Phase 3D payload is not going to be available on time, AMSAT must supply a ''mass simulator'' representing the Phase 3D spacecraft by September 5.

Tynan was philosophical about the latest complication for the Phase 3D program. ''This is the way engineering works sometimes. It's trade-offs and give-and-take with other people.'' He said it was too early to speculate on future launch possibilities.

--ARRL Space Bulletin 26, dated 30 July, 1997

Meanwhile, US astronaut Mike Foale, KB5UAC, bides his time aboard the troubled Mir space station; he has been active on 2-meter packet, and FM voice on 145.985 MHz.

Foale said he was disappointed that this crew would not get to make the needed Mir repairs, but that he was in "good spirits.". He "sends his best wishes and a big thank you to the Amateur Radio community" for its support during the Mir crises. Chris Edmondson VK3CE reports connecting with the R0MIR packet system July 22 on 145.985 MHz and "good copy for the entire high pass of almost 14 minutes." Foale told MIREX CEO Dave Larsen, N6CO, on July 21 that he was having frequent power problems with the TNC and losing messages. "Sorry. No supply store is near at hand," Foale quipped, adding that he was getting ready for the next Mir crew to arrive on August 7. (Note: Mir also uses 145.800/200 MHz--Ed.)

--ARRL Letter vol 15, no 29, dated 25 July

DX REPORT

MALAWI - 7Q7CE will be on 20, 15 and 10 meters from August 2 to 25.

OMAN - A45XL is active from Masirah Island, IOTA AS-014.

PAKISTAN - Pakistani stations will use the special prefix AP50 to celebrate their 50th anniversary of independence. There will be a special certificate available. Listen for details by the operators.

JERSEY - GJ/DF3OL is active as a QRP station from St. Saviour. He will be here until August 9.

GRENADA - J38AH and J38AI are active until August 21. They will put emphasis on the newer bands.

SVALBARD - JW0M is active from the Polish Academy of Science.

ARUBA - Several Germans will activate P40XM from August 1 to 26. Activity will include the Worked All Europe CW Contest. They may also go to the Netherlands Antilles and St. Maarten.

MIDWAY ISLAND - NH4/NH6YK is active on 10 and 6 meters. He will be here until August 20.

EASTERN KIRIBATI - T32Z has been found on 15 meters around 0230z.

INDIA - VU2PAI/50 will be active until September 30 to commemorate 50 years of India's independence.

ZIMBABWE - N9YXA is part of a communications convoy here and will be active as Z2/N9YXA from August 3 to 21. He can be found on 40 to 10 meters. Some RTTY operation is planned as well.

CALL SIGN CORRECTION - The call sign of the Hillview Gardens Resort in Eastern Malaysia will be 9M6AAC, not 9M6A as reported several weeks ago.

--condensed from ARRL DX Bulletin 33, dated 31 July, 1997

CLUB NEWS

WAVERLEY AMATEUR RADIO SOCIETY

Many of you listening to this broadcast would be familiar with the Heard Island DX-pedition earlier this year and I am sure would have liked to have taken part. The next best thing is to come along to our next meeting where David Muller, VK2JDM, who was the only VK expedition member, will give a presentation.

Those who have heard David's talk and seen his video and slides say that this is something not to be missed and that it will appeal to anyone with an interest in the Antarctic. So make a note in your diary for 7:30 pm

on Wednesday, the 20th of August.

Our clubhouse is next door to the Rose Bay RSL Club in Vickery Avenue, Rose Bay, off New South Head Road. Anyone interested is welcome to come along.

--Simon Buxton, VK2EII, President

THE OUTGOING PUBLICITY OFFICER FOR THE ILLAWARRA AMATEUR RADIO SOCIETY ADVISES ALL MEMBERS IT WILL BE SAFE TO ATTEND THE CLUB'S 34TH ANNUAL GENERAL MEETING WHICH WILL BE HELD IN THE MEETING ROOM S.E.S BUILDING,MONTAGUE STREET NORTH WOLLONGONG.

THE REASON FOR THIS SAFETY GUARANTEE IS THAT ALL POSITIONS ON THE CLUBS COMMITTEE HAVE BEEN FILLED!

THE MEETING WILL BE HELD ON TUESDAY 12TH AUGUST STARTING AT THE USUAL TIME OF 1930K OR 7:30 PM FOR NON DX TYPES.

BUT I KNOW YOU WANT MORE !

WE HAVE NOT ONE BUT THREE RAFFLE PRIZES!

YOU COULD WIN "FREE MEMBERSHIP" A "MULTI BAND RADIO" OR A "LOTTERY GIFT PACK"!

WHAT WITH VICTOR'S GOURMET SUPPER, THREE RAFFLE PRIZES, COMMITTEE ALMOST FILLED, YOU WOULD BE MAD TO MISS IT !! BUT WAIT THERE'S STILL MORE!!!!!!!!!

WE HAVE A MYSTERY GUEST SPEAKER! HE'S A PROMINENT PERSON IN AMATEUR RADIO. HE MAYBE SMALL IN STATURE BUT "" BIG "" IN AMAREUR RADIO.

MEMBERSHIP FEES ARE NOW DUE. SO FILL OUT YOUR RENEWAL NOTICE AND BRING TO THE MEETING AND PAY THE OUT GOING TREASURER "" BEFORE "" THE MEETING . AS "" NO "" FEES WILL BE COLLECTED BY THE NEW TREASURER UNTIL HE SETTLES IN.
I'LL BE THERE TO MEET THE NEW COMMITTEE AND I HOPE TO SEE YOU ALL THERE ALSO .

IF YOU WOULD LIKE MORE INFORMATION ABOUT THE ILLAWARRA
AMATEUR RADIO SOCIETY PHONE BRIAN FARRAR ON (042) 672296
AFTER HOURS OR CALL VK2UBF ON THE "BEST" REPEATER IN NEW
SOUTH WALES, VK2RMP 146850 .

--CHEERS FROM BRIAN VK2UBF OUT GOING PUBLICITY OFFICER
FOR THE I . A . R . S.

CHIFLEY AMATEUR RADIO CLUB

The club is open every Saturday at 1:30 PM.

The address is, The Good Shepherd Church Hall, at Hyatts Road Plumpton.

Members, Guests and visitors are all welcome.

The club holds a 2 meter net on the club repeater VK2RCZ, On Friday
nights at 8.00pm. All checkins are welcome. The Frequency is 147.075
with a positive offset.

For more information ring (02) 9837 2226 or (02) 9834 1186.

Coming events.
9 August. At 1.30 pm. Bi-Monthly Meeting
23 August. At 1.30 pm. Boot sale, Trash and treasure.

--The Publicity officer Michael VK2EK

LIVERPOOL AND DISTRICT AMATEUR RADIO CLUB

FOLLOWING THE RECENT ANNUAL GENERAL MEETING OF THE
LIVERPOOL AND DISTRICT AMATEUR RADIO CLUB, THE FOLLOWING
MEMBERS WERE ELECTED TO OFFICE FOR THE COMING YEAR:

PRESIDENT PAUL VK2UPB
VICE PRESIDENT GREG VK2YJO
SECRETARY GARRY VK2TSR
TREASURER DAVE VK2KLV
COMMITTEE SNOW VK2IFS
KEVIN VK2TKB
BOB VK2TG

THE NEXT CLUB MEETING WILL BE HELD ON WEDNESDAY 13TH
AUGUST, 1997 AND THE LECTURE WILL BE ON THE CONSTRUCTION
OF A SPECTRUM ANALYSER. THE SPECTRUM ANALYSER HAS BEEN
DESIGNED BY DAVE, VK2KLV AND CAN BE EASILY CONSTRUCTED
FROM RECYCLED COMPONENTS.

THE CLUB MEETS AT THE SCOUT CAMP, GLENFIELD. THE MEETING
WILL START PROMPTLY AT 8.00PM.

VISITORS ARE ALWAYS WELCOME TO THE CLUB'S MEETINGS.

--BOB VK2TG, PUBLICITY OFFICE

AUSTRALIAN AMATEUR TELEVISION CLUB

THE NEXT MEETING OF THE A.A.T.C. Inc WILL BE HELD ON AUGUST 10TH - IN 1 WEEKS TIME

NO TECHNICAL TOPIC FINALISED YET, BUT NEW ITEMS DISCUSSED!!!
NEW - AATC NETT DETAILS, RE TIMINGS TO BE ANNOUNCED NEXT WEEK

THIS MEETING IS AS USUAL OPEN TO ALL MEMBERS AND ANYONE INTERESTED IN AMATEUR OR SATELLITE TELEVISION ON THE AIR OR INTERNET.

FOR MORE INFORMATION ABOUT ATV. CONTACT BOB THE PUBLICITY OFFICER ON (02) 9587-3491 DURING NORMAL CIVILISED TIMES.

--A.A.T.C. Inc. Publicity Officer Bob Barnes.

GLADESVILLE NEWS

Members and visitors are reminded that the August Monthly Meeting will be held Monday week, the 11 th, at 7.30 pm.

--73 Keith VK2ZZO President / TV Co-ordinator.

FISHER'S GHOST AMATEUR RADIO CLUB

Classes are held in Basic Electronic Theory and Morse Code every Wednesday Evening from 7:00 pm at the Campbelltown High School, Chamberlain St Campbelltown

Also every Third Tuesday of the Month from 7:30 pm, at the Campbelltown High School, is the General Meeting night with lectures on popular subjects.

Our Packet PMS VK2FFG is now on 145.100 Mhz and its Home BBS is VK2TLU.

The next Committee Meeting is on Tuesday 5th August at 7:30 pm in the Club Rooms.

This month's lecture is on the 19 th of August and is about High Speed Packet.

The September lecture is being presented by the Blue Mountains ARC and will be about "Fox Hunting".

Don't forget JOTA in October.

The Proposed lecture agenda is:
August 19: High Speed Packet
September 16: Fox Hunt Information Night presented by Blue Mountains ARC
October 21: Home Brew Competition

Publicity Officer Chris VK2ZCJ Ph.: (046) 81 9365 (Home

THE HORNSBY & DISTRICT ARC. INC.

Our next meeting is the informal get together, at 8:00 pm. in the Mount Colah Community Centre. Pierre Close Mount Colah. (near the eastern entrance to the railway station.) on Tuesday the 12-8-1997. Our next formal meeting is on the 26th. August, at which our guest speaker will he Keith VK2ZZO, the talk will be on ATV and a little on VK2TVG, the technology ATV station. Don't forget the Remembrance Day contest, we have some members that have pledged their service, but a few more, would be appreciated.

Training Classes: For more informatio contact Tony VK2BTL by phone on 9487 3383 once more 9487 3383.

The Club holds a Net each Monday night at 8:00 pm. on VK2RNS. with a frequency of 147.250 with a positive offset. Do join in if you have a licence, if you are a listener set your reciever to 147.250. We would like to
hear from you, or better still we would like to meet you at one of our meetings, you will be made quite welcome.

If you would like more information about the Club, write to HADARC., Post Office Box 362., Hornsby 2077., or phone John VK2WRT on 9807 2490.

--Submitted by. John. W. Turner VK2WRT Publicity Officer

THE VHF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR GENEROUS ALLOCATIONS IN THE VHF SPECTRUM AND ABOVE.

EVERY SUNDAY THE GROUP HOLDS AN INFORMAL NET ON TWO METRES FM AT 11 AM. THE PURPOSE OF THE NET IS TO ALLOW FM-ONLY OPERATORS THE OPPORTUNITY TO CONTACT PEOPLE NOT NORMALLY ACTIVE ON FM AND TO FIND OUT ABOUT ACTIVITIES ELSWHERE ON THE BAND.

TO MAKE THE EXERCISE EASIER FOR ALL CONCERNED, THE NET IS MOVING FROM ITS OLD SIMPLEX FREQUENCY TO THE BLUE MOUNTAINS REPEATER ON 147.05 MHZ, STARTING THIS SUNDAY AT 11 AM. THE FACILITY HAS KINDLY BEEN MADE AVAILABLE BY THE THE BLUE MOUNTAINS RADIO CLUB, CALL SIGN VK2HZ - THE CALL FORMERLY HELD BY THE LATE BILL MOORE, ONE OF THE ORIGINAL VHF PIONEERS IN VK2.

ANYBODY IS WELCOME TO CALL IN AND JOIN THE DISCUSSION. FIND OUT WHAT GOES ON BELOW 144.600 MHZ !

OUR THANKS TO THE BLUE MOUNBTAINS RADIO CLUB.

Sorry! THAT price hike was long overdue. Have you looked
at the relative costs of processed base metals lately? Copper is
and continues to be a relative bargain.

Something about "over abundance". <VBG>

Where is "east of 15th street"?

Mike Flaugher N9LLX (flaugher@thepoint.net) wrote:
: All right, here it comes. Crazy Mike is at it again. I try to hold my peace
: but I just can't stand it anymore. Doesn't ANYBODY see that Earth
: temperatures have started cooling, the sea levels are turning toward
: decline, and cloud cover is going nuts around the globe? Does no one see
: the correlation between the weather events of the last three years and
: what's happening (or not happening) with sunspot cycle 23? We are dead in
: the water for solar flux, folks, and we just went another couple of days
: with NO spots on the sun.

[snip]

: I believe another solar minimum event like the Wolf, the Sporer or the
: Maunder may be coming. Three times in just the last thousand years alone
: the sun has gone into a period of quiescence and (coincidentally) the Earth
: has been hit with global COOLING that has brought the same patterns of
: drought/flood/harsh winters we're beginning to see acelerate around the
: world today. Just look at the number of climate records we're breaking that
: go back to the early 1800's or even to the Little Ice Age/Maunder Minimum
: itself 300 years ago.

Since I live in a place where the climate records seem to go back only
a little more than a hundred years, I hadn't noticed this!

[snip]

: I look at the waveshape of 14-C and 10-Be isotopes
: extracted from two thousand years of ice cores and tree rings and what I
: see is another cold epoch on its way.

[snip]

: What's crazy to me is how The Environmentalists refuse to give up
: insistence on man-induced global warming. Sure, the theory may be correct
: about CO2, but we're understanding now that man's efforts are just a drop
: in the bucket comapred to the power of the sun.

[snip]

: The truth, to me, is that a climate shift is coming, and we'd better
: get ready for some major crop production problems in the coming decades
: along with some big-time layouts of disaster relief funds. Over the course
: of the next decade, we will drop our global warming fears like a hot (or
: not-so-hot) potato. If this cycle to come is anything like the Wolf, Sporer
: or Maunder, we may not see real weather mildness throughout the ENTIRE NEXT
: CENTURY!

So please suggest something to do besides wailing about how the "Enviros" are wrong.

: I am NOT a professional scientist. I am an amateur. Please understand this
: as I give my prediction for the future. I think we're going to see some
: climate "stabilization" or slight improvement for the next five or six
: years as we get into the peak (although a low peak) of sunspot cycle 23.
: Following that, it's Katie bar the door.

[snip]

I assume that these predictions are based on fourier (or guesstimate?) analysis of the record of sunspots. The existence of the Maunder and earlier minimums demonstrates the futility of trying to use such cyclic analysis to predict future solar activity. The poster may be guessing right or guessing wrong, but guessing he is. Sorry, but good luck and 73

Greetings:

Please accept this invitation to visit our Web Sites. Both are
constantly growing, and that is where
you come in. We need your input.

The first, http://www.kb8uyz.com/kb8tnq is the KB8TNQ Ultimate Amateur
Radio Page! and is
a great source for the Ham and even those interested in getting into the
hobby. With a plethora of
links and a "Site O' the Week"...(one selected by yours truly)
we hope you'll find this Site user friendly.

The second, found at http://www.kb8uyz.com/cmarc is the Central
Michigan Amateur Radio
Club Web Site. While this Site is primarily a "Club" Site, we do have a
"Trader's Page", which was
recently started. All postings to this page are FREE, so if you have
unwanted Ham gear, feel free to
check it out and help us get the word out.

Thanks for your time and we'll look forward to seeing you soon.

7-3,
Jim KB8TNQ

In article <5rtimk$6m7@news.Hawaii.Edu>, Jeffrey Herman
<jeffreyh@Hawaii.Edu> writes
>With the ceasation of the VLF OMEGA navigation radio transmitter here
>on Oahu, the State of Hawaii is confronted with the task of having to
>remove this extraordinary wire antenna system. The antenna consists of
>six 1 1/4 inch cables, each 7,500 feet in length, stretched between two
>ridge tops, with a valley 2,500 feet below. Each cable weighs 30,000 pounds.
>The new H-3 freeway runs through the valley floor.
>
That's about 15 tonnes I guess - not that heavy
>The state is considering two methods of removal:
>1. Explosive charges would be placed by helicopter off the center of
>each cable which would cut each cable in such a way that no damage
>would occure to the freeway 2,500 feet below. The cables would then
>be cut up and hauled away (no easy task since the valley floor is
>a dense rain forest). The state does not favor this method.

Don't see why. If the cable drops it'll probably only wreck hits which
will be a strip a few feet wide by nearly 4000 feet long. The majority
of the damage would be from, I guess, the crews going in to pull it out.
If it falls straight why couldn't it be dragged from the existing mount
points?.

>2. A winch would be attached to each cable anchor and each cable would
>be slowly lowered to the valley floor. This method is supposed to be
>cheaper and less harmful to the forest below. A thick rubber mat would

I still think that this would cause just as much damage as the people
going in would cause the largest portion of it.

>An event of this magnitude is apparently so rare that there are no

>your thoughts, email me (or post them on here) and I'll forward them
>to the the state engineers heading this task.
>
>Jeff KH2PZ / KH6
Yes, to repeat what other posters have added - speak to the power
people. Another thought is this. IF the cable is cut in two you are
left with 2 7 tonne pieces. This is not a fantastic amount. Would it
be possible to lift the ends by balloon (Blimp would be better cos this
is a lot) and then tow it in. Or replace the cable with a lighter one
which could support the original one as it is winched in and then lift

this out. The possibility of putting a heavy lift helicopter in the middle and then cutting the ends whilst slowly paying out a lighter cable to control their swing to the centre also sounds possible.

What ever the answer is could you post it here as this sounds rather intriging (however you spell it). I must also suport the chap who asked - if the military put it there they should damm well take it away. This sounds like a vey good training execise for the combat engineers - you gets some training done on the military budget and the antenna goes for free, at least as far as Hawaii is concerned.

Yesterday when I was on a 10 meter FM repeater
WK1V called me, we switched to 75 meters and talked
for an hour. Even though he said in a message yesterday
that he could not stomach talking to me, he managed to
hold his stomach for an hour.

However he really did not debate me so I am still
looking for one of my true opponents to get on the air.
Guts anyone?

>a big increase in flux and spots by now, a year and three months into the
>new sunspot cycle, especially since everyone and their pooch predicted that
>Cycle 23 would be the Grand Poobah of all cycles.

No we shouldn't see a big increase in spots by now. We just went through
transition from 22 to 23. It does take awhile for things to start cooking.

> I believe another solar minimum event like the Wolf, the Sporer or the
>Maunder may be coming.

What makes you think this?

>Call me a boob but I think everything is

>limb like this if it sparks some more very needed discussion.
> Hey, Ray, what'ya think of this tri-mode thing?

This is just plain silly. Things are looking normal at the momet as far as
sunspot activity is concerned. The new cycle has started and it IS increasing
albeit solwly. Have patients

Hey! And it still feels fine this morning, hehehe. Enjoyed the QSO
Burt.

>However he really did not debate me so I am still
>looking for one of my true opponents to get on the air.

I guess I'm not a "TRUE" opponent as I just enjoyed chatting. Didn't
see any reason to become competetive as you were quite civil and
interesting to talk to....umph....oh, just gas I guess....Whew!
Thought is was my stomach. :)

>Guts anyone?

And stomach too? :) Oh, by the way Burt...I am a little overweight.
I guess by about 35 to 40 pounds. My primary care physician and
cardiologist know why...and we're working on it. Has nothing to do
with ham radio other than the fact that I am a ham radio operator and
have enjoyed this Hobby/Service for years. I hope and plan to for
years to come.

Remember, today's word is DIVERSITY. And, if we were all alike, it'd
be awfully boring on this planet...kinda like talking to one's self
and answering back 24 hours a day...but then again some people can be
pretty creative at that.... Just ask me......NOT!

Oh, and to the dim-wits out there who find it necessary to call
someone's place of employment for their activities on the net.....GET
A LIFE!! I bet you grew up as tattle-tales and never got over it.

I read some catalog a while back about a device I could incorporate somehow with my car's AM radio and have it receive a limited region of the shortwave spectrum.

Can anyone please point me in the right direction for this type of device?

Thanks much in advance.

Run the radio off of DC and shut off the house from the panel/fuse box.
See if the noise still exists. If it does not, bring each circuit on one
at a time and isolate the one creating the noise. Look there. If you still
have the noise with the house shut down you have eliminated the house
wiring.

The point is, they DIDN'T poll ALL U.S. AMATEURS, only members.
>The League represents the entire body of amateur radio operators
>(members or not) better than any other organization that has come down
>the pike so far. Perhaps in the future a better organization will come
>along but I wouldn't hold my breath while waiting.
>
>73 de n4jvp
>Fritz

They DO NOT represent the "entire body of amateur radio operators,
only members. If they truly cared about the wishes of ALL U.S.
Amateurs, they would listen to non-members as well as members.

Well, it seems to me that someone out there ought to jump
on this and blame the ARRL for the sun spot situation. In its
mad grab for power, you'd think the ARRL can fix the sun spot
cycle that it's obviously been messing with.

Mike
KC7RHR

P.S. Perhaps while the ARRL bashing is in full swing, someone
can accuse it of taking out JFK, Bobby, MLK, and putting
Hinckley up to it.

Yeah, but will it load up on 11 meters?

Gary

2165. Many questions from a CURRENTLY unlicensed person.

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-03 00:00:00 UTC
From: (unknown)
Message-ID: <33e4d390.7385735@news.mindspring.com>
Source record: 192474

Hello,

Let me begin by stating that I am NOT currently a licensed
Amateur Radio person BUT, I am studying to be. I have some questions.
I am having the hardest trouble finding someone to give me the
test. I have been studying the TECH book that I bought from Radio
Shack. I can't get people to return my calls, answer my e-mails, or
point me in the right direction to get the opportunity to take my test
for a license. I live in a large city in N.C. that I know has many
HAM Clubs, but I can't get any members to help. I have basically done
everything on my own and am ready except for the test. Here are some
questions I have.
1- I bought an Icom IC-207h and have given my wife the mic so
the chance of pushing the PTT will be zero. I made her hide it and
not give it to me until I get a license. I am using it to listen
ONLY. Will I damage the unit by NOT having the mic connected? Am I
STILL legal having the transmitter but not transmitting?
2- Am I headed in the right direction by studying the book
from Radio Shack? Should I wait and go NOVICE instead of TECH?
3- How can I find out the repeater freqs for my area so I can
listen to more than the one I have so far?
4- Are there reliable resources available to find people to
administer the test?

Don't reply if you think I am just whinning because I can't get help,
I truly wish to get licensed so serious responses please. Respond
here unless your message is lengthy, if so, use the e-mail at the
bottom.

Thanks in advance to those who help,

MTShipp
todd.shipp.b@bayer.com

Message-ID: <33E4DBDA.1473@worldnet.att.net>
Source record: 192475

1. Not having the mic connected will not damage your rig. It is legal for you to have the rig and listen. Only unlicensed transmiitting would be illegal.
2. I am assuming you are talking abt the NOW YOUR TALKING no code tech study manual. Go ahead and take the tech test. If you become interested in working HF then study the code (CW) and get the HF license.
3. Go to http://www.artscipub.com/repmain.html click on your state for the repeaaters in your area.
4. Try contacting the arrl. They may be able to tell you who administers the test in your area.

Last but not least. Good luck on the test! Hope to talk to you on HF someday soon. stan/kb8jlv in humid honolulu

SB DX @ WW $OPDX.316
Ohio/Penn DX Bulletin No. 316

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 316
BID: $OPDX.316
August 4, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W3CF, W3UR & The Daily DX, N4AA & QRZ DX, K8NA, DJ5AV & DX News Letter, EA5ZI, G3USF, G4BUE & DX News Sheet, PY1CAS, SM0KCO and ZR5DTS for the following DX information.

5W, WESTERN SAMOA. Perry, WH6XY, who is active as 5W1PC until November, can be found mostly weekends operating SSB on 15, 17 and 20 meters using a FT-757 and delta loop. He is currently working as a schoolteacher there.

7Q, MALAWI. The "DX News Sheet" reports that Eli, IN3VZE (ex-9J2CE), will be active now until August 25th as 7Q7CE. Operations will be on SSB, 20, 15 and 10 meters. QSL via homecall.

BT, CHINA. Lou, PA0LOU, will be active from September 4-16th with the special callsign BT1IARU while attending the IARU Region 3 Conference. Operations will be from a hotel in Beijing where he is staying along with other delegates.

FW, WALLIS & FUTUNA ISLANDS. Paul, FW5IW, will continue to be active from here until August 14th. Reports state he will be active on CW only on 15, 20, 40 and 80 meters. Most of the QSNs reported so far have been on 20 and 40 meters. QSL via OH5UQ.

IOTA NEWS....
ED5HQ and EF5HQ will activate Columretes Islands (IOTA EU-069) from August 7-10th. Look for them on the following suggested frequencies: SSB - 3700 (under) and 21200 kHz and CW - 7025 kHz.

CT1FMX and CT1AXS will activate Berlenga Island (IOTA EU-40) from August 10-16th as CQ1I. Operations will be on 80-10 meters. They will pay special attention to all stations in the Pacific and also JA and VK land. This team will also operate, if they have good conditions, the other islands near Berlenga for the FIRST time ever. QSL by CT1FMX.

G3ZAY, GM0UGG, G0PCE, and G0PYA will be active from the Scottish Island of Shiant (EU-112) August 16-17th (weather permitting). QSL via G3ZAY: 41 Enniskillen Road, Cambridge, CB4 1SQ, England, or via bureau.

NEW IOTA! BG7IA, BG7IB, BG7KR, BG7KT, BG7LP, BG7NI, BD7JA, BD7JG, BG7JK, BD7KW are in the planning stage of putting a new Island On The Air (IOTA). This island is DanGan Island which is part of the Wai-Lin-Din Archepelego (NE of HongKong) and is listed in the Guangong Province East Group without a reference number. They are planning for this to take place August 15-17th.

KH2, GUAM. Ray, WH6ASW, will sign WH6AW/KH2 from here again from mid-August until December. QSL via VK4FW.

KH3, JOHNSTON ISLAND. Al, KK5ZX, will be active every third and fourth day during his stay beginning August 23rd. His activity will be from the club station there and operations will be mostly CW but, there will be some SSB on 160-10 meters.

KP2, U.S. VIRGIN ISLANDS. Long time DXpeditioners Doug, W3CF; and Dick, K3MQH; will be active from Windwood, WP2Z, from October 22-30th. During their stay, they will participate as a Multi/Something entry in the 1997 CQWW Phone Contest. These charter members of V26B will focus on WARC bands and RS-12 during free time. QSL W3CF/KP2 to his QSL Manager Koos, KK3S. QSL K3MQH/KP2 to his home call, K3MQH. QSL contest call "WP2Z" for THIS CONTEST ONLY (1997 CQWW PHONE) to KK3S. Windwood is a rental property, so many different QSL routes will apply. Pay close attention to announced QSL routes in specified time periods and specific contests. For more information, E-mail this operation (1997 CQWW Phone) to: W3CF@aol.com

NEW BEACONS....
Martin, G3USF (IARU Region 1 HF Beacon Coordinator), reports that the latest IBP HF beacon to become operational is OA4B. It transmits on 14100, 18110, 21150, 24930 and 28200 kHz in the worldwide beacon network sponsored by NCDXF. OA4B transmits for 10 seconds on each of these frequencies in turn between LU4AA and YV5B. Like the other NCDXF/IBP beacons, the power steps down from 100 watts to 0.1 watts. Martin also reportd that 5Z4B, the Kenya beacon in the same network, is currently off the air due to power supply problems.

Carlos, PY1CAS, reports that a new 6 meter beacon is on the air. The Brazilian League (LABRE) now has a beacon in Rio de Janeiro working on 50052.0 MHz. It is running 5W on a Ground Plane.

P4, ARUBA. The "DX News Letter" states DL3XM, DL4LQM, DL5LYM and DL8WAA will be on the air as P40XM from August 1-26th, which will include activity in the WAE CW Contest. They will also try to activate PJ2 and PJ7. QSL via Gunter, DL3XM (ex DL8WXM), via bureau or CBA 1997.

QSL INFO AND NEWS......
The GI7J 1997 IOTA Contest Team (GI0KOW/Robert, GI0NWG/Andrew, GW4VEQ/ Tony, EI6FR/Declan, EI2GX/Tony, EI7DSB/Liam, EI7HF/Emmet and EI9IF/ Alan) would like to thank everyone who made a contact with them during

the contest. Also, they would like to remind everyone that QS cards for GI7J will be handled by Tony, GW4VEQ.

If you were lucky to work Ray, G3NOM/9M2OM as 9M2OM/P, from an island in the Selangor/Negeri Sembilan State Group off the West Coast of West Malaysia (IOTA AS-074), QSL via G0CMM.

Ted, K8NA, is the QSL Manager for KH2D, Guam Island (IOTA OC-026). K8NA has the computer logs for KH2D dating back to January, 1986. All those needing QSL confirmations for KH2D, may send to K8NA direct or via the bureau.

T4, CUBA (Attention Prefix Hunters). Members from Kvarnberget Amateur Radio Club (SK0UX) and Radio Club Las Tunas will activate Cuba with a unique callsign T48RCT during the 1997 CQWW CW Contest November 29-30th. Operators from Sweden will be SM0DRD/Goran, SM0JHF/Henryk, SM0KCO/Carlos, SM0MO/Ingvar, SM0AIG/Ingemar and SM5DSB/Kare. Operators from Radio Club Las Tunas were not listed in the release. The station will be active one week before the contest, and one week after. Activity will be on CW, SSB, RTTY which inclues operations on the WARC bands. QSL via SK0UX. A SK0UX QSL-server will be available on Internet to download your cards instantaneously at URL: http://ham.te.hik.se/clubs/sk0ux. For more information about the expedition, check out the WEB page at URL: http://ssa.te.hik.se/clubs/sk0ux/T48RCT.html -or- via E-mail at: rsa.rsacr@memo.ericsson.se

TY, BENIN. Sigi, DJ4IJ, will be active once again from now until September 10th as TY1IJ. His activity will be mainly 160, 80 and 30 meters. He has a sked on 18140 kHz during the weekends (no times were given). QSL via DK8ZD.

V31, BELIZE. Joe, K8JP, and his XYL Bev will be traveling here on August 12th and then return home on August 21st. He is currently waiting for his callsign to be issued. He reports to us that he will operate on 80-6 meters, but maybe 160 is possible. Joe will be active mostly on CW with some SSB operations. At times they will be active mobile depending on how bumpy the roads are (Joe.."They are all bumpy, some are just worse than others.") QSL via: Joe Pontek, K8JP, P. O. Box 59573, Schaumburg, IL 60159-0573, U.S.A. SPECIAL NOTE: His Indiana or any other addresses are no longer good.

VK9, NORFOLK ISLAND. According to "The Daily DX", Kevin now signing VK9NX is here for about 2 weeks celebrating his 60th birthday. He was heard active most days on 80 meters between 1000 and 1200z. QSL via VK2CE.

VK0, MACQUARIE ISLAND. Tom, VK0TS, has become increasingly active over the last few days. Watch for him on 14222 kHz starting around 0400z (sometimes with Jim, VK9NS). Reports also indicate he sometimes goes to 40 meters (7075 kHz) around 1100z to work VK, ZL and JA operators. If he is not around 40 meters this time check 80 meters (3799 kHz).

XU, KAMPUCHEA (Cambodia). Both Mike, XU6WV, and Harv, XU2FB, continue to be active on 20 meters looking for NA and SA stations. Look for them to

be on between 1130 and 1430z. Frequencies reported on were: 14192, 14195 and 14226.5 kHz.

ZD9, TRISTAN DA CUNHA. Ian, ZD9IL, is active from here and can be found on most bands. JA operators have heard Ian on 14202 kHz between 1500 and 1600z working mostly JA stations. There were no other QSNs reported.
His QSL Manager is Edwin, ZS5BBO, and QSLs can be sent direct to:
Edwin Musto, P.O. Box 211032, Bluff, 4036, SOUTH AFRICA. Edwin does have an E-mail address: Edwin@mec.co.za

Despite several shortcomings, I'd recommend the Icom 706. With a current Technican ticket, you'll have 2m and 6 meter, FM as well as SSB. Then once upgraded you'll have 10m, all in one rig. If you get the 1st edition, you can probably find them for $850 used, $950 new.

The ARRL should be able to help you http://www.arrl.org I think.
As I recall, most areas seem to start out by putting repeaters in
frequencies that most travellers will look first for example 146.94
Most repeater outputs seem to hoover around 147.0 eg 146.7x .8x .9x
and 147.0x .1x .2x .3x etc.
From listenning to them you should be able to figure out which hams
seem to be associated with which clubs and then make some local phone
calls.

Do you know any hams personally. If not, how did you find out about
ham radio? (just curious).
I am a Canadian so I am not really able to help you that much.

Hello Todd,

1. You are completely legal owning and listening to any ham rig (unless you are listening to cellphone conversations), so no problem there. Also, using the rig to receive without the mic won't hurt a thing. Heck, I even have friends who are CW buffs who have several rigs and don't OWN a mic.

2. The Radio Shack book is just fine and is what most of us licensed in the last few year have used. If you want more in-depth info on the theory, it's all right here on the internet. If you want to operate 2 meters, you'll need to get your Tech ticket or Tech Plus, since Novice has no 2 meter privileges.

3. Best way to find repeaters is with the ARRL repeater directory. Pick up a copy of QST (or even CQ) at your local newsstand and order one. Or, alternatively, use the search engines on the good old internet to find local clubs with repeater listings.

4. The best Elmer source I know of is maintained by Paul, K3FU and is located at:
http://www.novia.net/~pschleck/elmers/
If you want to see a bunch of other interesting ham stuff, be sure and visit the site I maintain for the Stones River ARC at:
http://www.vol.com/~rfi/stones.html

Welcome to the Newsgroup and I look forward to working you on the air.

If non members are concerned with their "representation", they should
pay dues and vote for league officials who will represent their views.

Non-members who bitch about the "league's representation" are akin to
people who bitch about their elected officials, but when asked who they
voted for, answer "I didn't vote".

Hello to all.
I'm looking for this little tunable FM transmitter (87-108 MHz)that
was made in the late 1960's by Kinematix, model number "IMP II".
It's 3 x 1-1/8 x 2-3/4 in size.
It's black and has a slide power switch on the front.
A microphone could also be plugged into the top. It was tuned
with a plastic tuning tool. This gem is in the 1967 Lafayette
Radio catalog for $39.95.
Does anyone out there have one of these at the bottom of a draw?
If so, and if it's in working order I'd like to buy it from you.
Let me know how much you want for it.
Please e-mail me direct
THANKS, Mark

NOTE If you want to E-mail me, you MUST REMOVE the NO.JUNKMAIL
in my address. It should read: mrusso@hoflink.com I'm trying to stop
the unwanted Junk Mail. SORRY for the inconvenience but it's getting
out of hand.

Always Available through Technology..... UNLESS SOMETHING BREAKS!!

>With all due respects, in the absence of any other voice, the fact
>remains tat ARRL does speak for ALL of ham radio in the US.

This is really strange logic, Bill. The ARRL can only speak for
its membership unless it reaches out to find out what the whole
of amateur radio thinks (and that is certainly possible to do with
some committment of money, time and open attitudes....)

>overall sense. And, as mentioned already, unless others
>speak out, then the ARRL is the only voice being heard and, therefore,
>THE representative voice.

Bill, this is not correct. You seem to feel that the ARRL is
important, all right. The ARRL is the only large group that takes
a somewhat visible stand, all right. The ARRL does some very
valuable things for all amateurs at times, all right. However,
this does not translate to the ARRL somehow representing a
very large number of hams that they never consult or communicate
with!

This is not an attack on the integrity of the ARRL or its good
intentions. Heck, our director out here, Fried, actually does
listen to non members and does some serious outreach to get
people involved. However, that does not change the fact that the
ARRL membership is a real minority among hams. Ask the question
why this is so, and that is much more important to answer than
this silly factual question of how "representative" the league
is.

WOW!

Here's what I recommend...

Start with a new 'ground rod', as close to the radio as you can get,
even if it means drilling a small hole thru the wall. Assure a short
wire from the rod to the transmitter.

Wet the ground around the rod for a few weeks.

Install a antenna tuner and always tune carefully.

*HAVE A ELECTRICIAN:

* Inspect the ground 'rod' and all junctions provided for the Power
Panel. Assure tight, clean connections!
* Clean all ground connections/junctions inside the Power Panel.
* Tighten all ground screws in the Master Panel.
* Test ALL outlets with a small neon outlet tester (about $5).
+ Assure proper connections and grounds.
+Correct any 'miswires'.
* Assure TIGHT coax connections at VCR's, Antennas, TV's, etc.
** Replace all outlets to three wire outlets. (last option)

That's a good start!

2189. SWAP LASER PRINTER FOR TUBE TESTER

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-03 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <5s0r5d$mbt@csu-b.csuohio.edu>
Source record: 192538

SWAP HIGH END NEC LASER PRINTER FOR HICKOK TUBE TESTER,
for example, 752, 752A, 539C, TV-7D, TV-10, B&K 747,
TRIPLETT OR OTHER DYNAMIC MUTUAL CONDUCTANCE TUBE TESTER,
ETC.

NEC Postscript Silentwriter LC 890 Model, 8 PPM, 2 MB Ram,
300 DPI, backlit two character lines LCD option menu
screen, external print density control, dual letter &
legal sized paper trays, dual printer ports (PC or Mac
compatible)--same as the HP Postscript high end office
model that's about $1200 right now and the only difference
is the HP is 600 DPI. I can't tell the difference between
300 & 600 DPI. NEC NEEDS MINOR REPAIR.

IF YOU HAVE A HICKOK OR SIMILAR UNIT THAT YOU WOULD LIKE
TO SWAP, LETS COMMUNICATE. Incidentally, to add the
Postscript option with all those nice Adobe fonts to a
basic laser printer usually adds $200-$400 to the base
price of the printer (licensed Adobe fonts and extra
memory required--these Adobe fonts are not in the Windows
True Type fonts, but show up only when you have this
Postscript printer listed with the ability to print them).
Hopefully, you'll be in the Ohio (northeast area) so you
can inspect it in person to avoid shipping costs for both
of us. It's heavy and not a cheap light duty type
printer.

You can email me directly at:
l.mclaughlin@popmail.csuohio.edu

Thank you

Hi Mike,
Are you sure you're on Earth? Here in the Pacific, it's just been reported
that a 7-mile piece of Alaskan glacier has melted. And over the years,
Pacific atolls have noticed a rise in ocean level (Australia has volunteered
to relocate Pacific islanders who will be displaced if their islands become
inundated {Jim KH2D, I hope you like kangaroo meat :}). Also, note that
that Florida, due to having beaches with very shallow slope, has one-time
beachfront property now under water. (Numerically small inclination amplifies
the slightest change in ocean level.)

Why do you believe the earth is cooling? Please cite your references.

>

Just a couple of ideas, do you have a doorbell ? and if so did you
disable it's xformer/power supply ? Those have caused trouble on
occasion and also some pre-amps (like a mast mounted one for your TV)
have been known to cause noise.

Good Luck

2198. *** ANNOUNCE: VisualRadio available in the UK ***

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-03 00:00:00 UTC
From: Simon Collings <simon.collings@cableinet.co.uk>
Message-ID: <01bc9fe5$ddad98c0$4c9275c2@sapphire>
Source record: 192547
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.amateur.misc,rec.radio.scanner,rec.radio.shortwave

Simon Collings, Radio Communications Consultant appointed UK distributor for VisualRadio

18/07/97 -- VisualRadio is a sophisticated RS-232 control package from Liedtke GmbH with support for a variety of radios.

Featues include:

Controls a wide range of popular radios. ICOM all models (including the R-8500), JRC NRD-525, NRD-535, KENWOOD all models, O'ELECTRONICS Scout *, RACAL 6790/GM, R & S EK895 / EK896 **, WJ HF-1000**, YAESU FT-736, FT-840, FT-900, FT-990, FT-1000, FT-1000MP, FRG-100, FRG-8800, Selected AOR models.

Control Panel. Signal and frequency display; mode, agc, etc...
Signal Display. Analogue S-meter display; max-hold; choice of dBm, uV, mV, S, RMS or peak. AF Analyser. Audio frequency spectrum derived from sound card (not supplied); 2.5/5 kHz sweep width; Peak Hold/Average; frequency at mouse pointer; Zoom x1, x2 or x4; Length 256, 512, 1024 or 2048 points.
Networking. VisualRadio can be used in a Windows-compatible network environment
Tuning. Receiver tuning via double click on the corresponding data in a table or on the desired frequency in a graphic display. Frequencies, mode of operation etc. can be easily transferred to the Masterlist, Channel Table and Log File; Automatic identification of stations at tuned frequencies
VR/Link. Link together two radios for dual operation using a pair of serial ports
Database. Unlimited number of Microsoft Access compatible databases; Additional features - user defined fields, filtering using SQL queries; SQL query save; sort fields a click of the mouse; search and replace all data in table columns
Timer. Timer-controlled scanning with automatic recording of broadcasts
Audio Recording. Recording in Windows WAV format
On-line User's Guide. A comprehensive on-line User Guide in Windows help file format guides you through all the features of the package. There is no printed manual..

VisualRadio is available in the UK from Simon Collings, Radio Communications Consultant. Point your web browser to the following URL for details of this and other radio related products:

http://wkweb4.cableinet.co.uk/simon.collings/products.htm

2199. License Renewal Scam Continues

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-04 00:00:00 UTC
From: bandswitch@aol.com
Message-ID: <19970804025800.WAA10345@ladder01.news.aol.com>
Source record: 192349

Watch out for your license renewal letter from W5YI. For "only $6.00" you can send your renewal to him for processing. Of course, for FREE you can send it to the FCC.

If you get one of these "notices," you have two choices. Fill out the form, reach into your pocket for $6.00, and mail it all to W5YI. Or, mail the form with NO money to the FCC. If you go with the second option, you might as well download a free 610 form from http://www.fcc.gov/formpage.html, as the form that comes in W6YI's "official" notice became obsolete a year ago. (The current form includes a field for your email address.)

While some think this is a "service," it is clearly a scam. From the official-looking envelope, official-looking wording to the VERY small print at the bottom (why is it the smallest print on the whole letter?) stating that "the FCC does not charge to renew your license," this scam amounts to nothing more than abuse of unsuspecting fellow amateurs. We all have to make a living, but scamming unsuspecting amateurs with misleading information to do so is really hitting low.

***

TO ALL AMATEURS IN THE NYC/LI SECTION OF THE ARRL:

An effort has been undertaken to remove Len Buonaiuto, KE2LE, from his position as Section Manager of the New York City/Long Island section of the ARRL.

A Web page containing information on this recall has been established. Members of the Section are urged to read about the allegations made against KE2LE so that they can determine for themselves if KE2LE's actions merit his removal.

The page may be found at http://www.li.net/~jtomason/recall.html

If, after examining the information, you feel that KE2LE should be recalled, please sign the petition, and, when your ballot arrives asking if KE2LE should be recalled, vote YES. Information on how to sign the petition can be found on the Web page, along with the latest news concerning the recall.

Thank you for your time.

Marc Kaufman, WB2DWC, ARES District Emergency Coordinator,
RACES Radio Officer, New York City

Mario Maltese, WF2T, Section Emergency Coordinator, NYC/LI

George Gluck, WA2WKV, ARES District Emergency Coordinator, Nassau County

Jim Everett, WB2ZIE, ARES Emergency Coordinator, Town of Southampton

Joseph Tomasone, AB2M, Deputy RACES Radio Officer, Suffolk County

rec.radio.amateur.misc

We have now added several new things to the KB8UYZ Amateur Radio Page.
We now have over 400 radio mods online, an updated amateur radio news
section, and a new amateur radio rig review page, which will be updated
soon!

You can visit our site at http://kb8uyz.com, and please let us know what
you think of the site.

COMING SOON!! Amateur Radio Web Site Redirectors!!
Are you tired of your old url? Is it too much work to give out your
full url on the air or write it out in an email message?

Well, we will be offering amateur radio web site redirectors very soon!
You will be able to access your web site via kb8uyz.com/yourname, where
your name can be anything you want, such as your callsign.

We will post the sign-up form online when this feature becomes
available. Visit our site soon for more information!

The FCC continues to accept Form 610's with an expiration date in
1996. That expiration date has more to do with dealing with the
requirements of a law ostensibly set up to reduce the paperwork
that citizens and government employees have to deal with. So far,
I'm still waiting. So if you wish, take the form, mail it to the address
listed on the form, and for the cost of a stamp, you're renewed for
approximately 10 years.

I believe if there's an attempt at a 'power grab' it is by some of the
'frequency coordinators' who don't want to abide by the FCC's definition
of same, and cause a "Mode War." See the discussion on my web page at:

"Native" FlexNet Win95 terminal programs are being worked on by
several authors, but as far as I know they are not yet finished.

FlexNet however includes a TFPC/DRSI emulator, so you should be
able to run any terminal program that supports these interfaces
with PC/FlexNet, eg. WinGT. I haven't tried this very thoroughly
myself, however.

MD is absolutely correct. The obligation is not on ARRL, but rather
on the non-,e,ner to take an active role. As I've said yesterday, the
ARRL represents all hams today because no one else is doing.

>why this is so, and that is much more important to answer than
>this silly factual question of how "representative" the league
>is.

I believe that ARRL membership is a minority among hams because:

Some hams choose not to join the ARRL because they disagree with some or all of our actions, programs and policies.

A number of the 700,000+ licensed hams have never been active hams in any sense of the word. (I personally know at least a dozen locallywho have become licensed and, in spite of all encouragement, have never had a single contact).

A number of the 700,000 licensed hams are no longer alive.

A number of the licensed hams are loners and never join anything at all.

A number of the licensed hams do not feel a need to support a "national" organization because they operate only locally.

A number of the licensed hams do not know much about the ARRL.

A number of the licensed hams are family of other licensed hams who are ARRL members, but have not ever joined because they get QST for free.

I have done a few informal spot checks of 100 posters on rec.radio.amateur. I have seen membership rates ranging from 50% to 80% on randomly selected groups of 100. Not scientific, but enough for me to think about the other possible reasons for our "minority" status other than the fact that an individual doesn't want to support ARRL.

I do not claim that this proves anything. I do, however, find it perplexing that those who want to offer that ARRL is a minority do not consider any other factors when they make that pronouncement.

Let me offer that I have not sent a contribution to the American Red Cross this year. This does not mean that I do not agree with the things that they do.

FWIW.

>Butch N2YMJ

Butch,

I have atteneded a number of ARRL forums over the years and seen the ARRL Directors ask those in attendance for their input. Never once have I seen a Director ask someone if they were a member so he or she could decide whether to listen or not.

ARRL will appropriately give more weight to the input of its members, but that does not mean that they don't want to hear the concerns of people who are not members.

Fine business on having a QSO Burt.

But, I am curious about your view that it takes "guts" for someone to talk to you? How is it you arrived at this presumtion?

I would like to suggest that if people don't want to talk to you Burt, it is not because they lack guts. It must simply be because they have no desire to talk to you. Or maybe your signal is not getting out. Sorry about that. But please consider that if it's the former, you have brought that on yourself.

2224. Scouge of titanium dioxide, ruining ham radio

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-04 00:00:00 UTC
From: k0hb@usa.NET
Message-ID: <ww03-BHDqrn2570@netaddress.usa.net>
Source record: 192374

Twenty-five years ago today August 4th, 1997, the Ap index hit 223, the ionosphere was bombarded with all sorts of solar particles with hard-to-pronounce names, and amateur radio was at it's peak. It has never been that good since. Ap indexes even in the 80's are unheard of lately.

Also, 25 years ago today, titanium dioxide was first released in a commercial product. It has led inexoribly to the decline of amateur radio as we know it. Titanium dioxide is directly responsible for the decline of the Ap index, and the resultant decline of amateur radio. It has also led to a horrible decline in well tanned girl torsos at the
beaches of the world.

In the late 60's a group of induhviduals who were rankled by the advent
of incentive licensing looked for a way to ruin propagation and thus amateur radio forever. Since propagation depends on a solar component known as freckles-del-sol (better known as sunspots), a means of stopping sunspots would destroy would destroy amateur radio.

The group discovered the sun-blocking power of a natural chemical called titanium dioxide, but they needed a way to deploy a thin mist of the chemical into the upper reaches of the earths atmosphere. Since
it could be dispersed by evaporation, these diabolocal fiends found the
perfect means of sending it skyward.

First they quietly obtained virtually the entire world supply of titanium dioxide, and then they started a rumor in the medical world that the tanning rays of the sun could actually be harmful. Incredibly, in 1972, people would believe anything.

Literally millions of bikini clad ladies, even on Gilligans island, were panicked! After all, it was August, the height of the swimsuit season, and most of them had not nearly amortized their investment in the latest Jantzen bikini, or patrial bikini. What could they do?

Meanwhile, the titanium dioxide Cartel had formulated a mixture of their chemical and coconut and put it on the market as not only a sun-blocker, but also a means of replenishing critical skin oils depleted by exposure to the sun.

Millions of bikini-owners flocked to purchase the new sun blocker,
spread it lavishly on their bodies, and returned to the world beaches.
Little did they know the horrible ravages they were inflicting on the
E and F layers of the ionosphere, as the gruesome chemical
evaporated from their skin and rose into the skies of the world,
from whence it ruins propagation on a global scale.

Hams, UNITE! Help take back the ionosphere! Be part of the solution,
not part of the problem. Visit your local beaches today and check
the skin of everyone for traces of this harmful solution. It can be
easily detected by it's characteristic coconut smell, and even small
concentrations are dangerous. Carefully sniff all bodies on the
beaches for traces of this chemical. If detected, throw the offending
person in the water to dilute the effects, and burn on the spot
any garments known to be contaminated.

Save amateur radio....
.....to the beaches, now!

73, de Hans, K0HB/4ID

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
P.O. Box 636
Griffin, GA 30224-0636
USA

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

Derrick C. Cole KC4WEJ

PGH SATERN - Primary repeater system for Salvation Army

Maintainer of Link Communication List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/link.html

Only present users of Link Communication Products are welcome to join the list server. If you need information on Link Communications Products, contact them directly. Presently there are aprox 325 Members on the list server.

Maintainer of ACC List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/acc.html

The ACC list has approximately 300 members at this time. I am trying
to restrict the list to only ACC users (control people) and owners.
The list is also supported by the new owner of all the rights to ACC,
Link Communications. I am also running the Link repeater controller
list server. It has approximately 90 members at this time. The way to
join the list server is to send me a short E-mail and tell me what
equipment you are using. (Note: I have no ties to Link Communications
or ACC. I started the Link list first and found how useful it is. I
had a lot of requests to start the ACC list and did it.)

http://sunsite.unc.edu/mdw/HOWTO/AX25-HOWTO.html

Please direct any feedback, submissions, or administrivia regarding
these resources to my E-mail address above.

I've been an active Linux advocate since it first appeared on the
Internet. I was looking for an operating system that would better meet
the needs of my interest in Amateur Radio and provide me with an
environment in which I could actively experiment and develop. Linux
provides that and I've been promoting its use within Amateur Radio
ever since.

I'm an early contributing member of the Linux Documentation Project,
and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet
(44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney (Australia) University of
Technology Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

I am a practicing electronics engineer (for over 35 years) with expertise in solving problems in the design of linear circuits, audio signal processors, low frequency (DC to 10 MHz), low noise, field effect devices, power supplies, batteries, and similar analog situations. I'd be glad to assist others in the solution of their electronic problems in these and tangential areas. I started in ham radio as a kid in the 50's, vacuum tubes, motor generators, and most everything related to WWII surplus equipment. Was a design engineer at Texas Instruments for several years in the heyday of discrete devices and linear integrated circuits, mostly for military and surveillance use. My present concentration is toward digital telephonic communications. Have now gotten pretty familiar with use of the Internet. I guess it goes without emphasis that my capability goes beyond the areas I listed as being most competent, but I could be a resource you may apply as you feel my experiences would be helpful.

+ with the subject line:
+
+
+ Request
+
+ and one or more of the following in the body of the message:
+
+ list
+
+ for list of mail groups on TAPR.ORG
+
+ information listname
+
+ (where listname is the name of the mail group)
+
+ to request the information on any mail group
+
+
+ subscribe list your_first_name your_last_name
+
+ (where list is the name of the mail list you want to join and
+ your_first_name and your_last_name are your first and last names,
+ respectively)
+
+ to subscribe

+
+ Some of the current SIGs include:
+
+ NETSIG Regional Networking SIG
+ BBSSIG BBS SIG
+ HFSIG SIG on HF Digital Topics
+ DSP-93 SIG for those that are building TAPR AMSAT DSP-93 kits
+ APRSSIG SIG on APRS
+ TAPR-TNC SIG on TNC Issues
+ DSP SIG on general DSP topics
+ MIC-E SIG on supporting the TAPR APRS MicEncoder kit
+
+ TAPR-BB Announcement channel for TAPR bulletins and information
+
+ General Information about TAPR:
+
+ * Ever heard of a TNC?
+ * Interested in general packet radio information?
+ * Interested in Spread Spectrum Communications?
+ * Interested in high-speed packet operations?
+ * Interested in other types of digital communications?
+ * Interested in experimenting or building kits?
+ * Interested in keeping up-to-date on national digital and packet
+ issues?
+
+ Then you might be interested in TAPR!
+
+ Goals:
+
+ * Support Research and Development efforts in the area of amateur
+ digital communications
+ * Disseminate information on packet and digital communications
+ * Provide affordable and useful kits for experimenters and hobbyists
+ * Pursue and help advance the amateur art of communications through
+ publications, meetings, and standards
+
+ History:
+
+ If you have used a packet radio TNC, then you are already a part of
+ TAPR history.
+
+ The TNC (Terminal Node Controller) project was the first big project
+ that TAPR tackled and completed. Now TAPR covers a wide range of
+ interests including: APRS, Spread Spectrum, networking, Timing, DSP,
+ HF, and much more.
+
+ TAPR was founded in 1982 as a national organization with interests in
+ the areas of packet and digital communications. Today, TAPR continues
+ as a membership supported non-profit amateur educational research and
+ development organization. TAPR currently has more than 2500 members,

```
+ worldwide. TAPR continues to develop kits for the amateur community
+ and is working actively on publications and communications standards.
+
+ Membership:
+
+ Membership in TAPR includes a subscription to the quarterly published
+ Packet Status Register newsletter. PSR has been published since 1982
+ and is recognized as an authoritative source for up-to-date user and
+ technical information on packet radio. Much of the material in PSR is
+ timeless. Back issues may be obtained from the TAPR office. Membership
+ in TAPR is $20 US for one year in USA, Canada, and Mexico. Outside
+ North America is $25 US.
+
+ Join the amateur digital-revolution -- Join TAPR!

Fred O. Maia W5YI

fmaia@internetmci.com

http://www.w5yi.org/

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
USA
Tel. +1 (817) 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse Code training products are also available from every Radio Shack nationwide. Color photographs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 (817) 461-4663 anytime, including evenings

and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 (817) 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 (800) 322-1117.

Wearable Computing and Personal Imaging

[_Editor's Note:_ Steve is currently a graduate student at the MIT Media Laboratory and has done a considerable amount of research into, and implementation of, wearable, wireless networked computer systems using amateur radio (via a 56kBaud GRAPES radio modem) as the physical layer. He is arguably the Inventor of the "Wearable Computer." You may have read about him in the April 1996 issue of Scientific American in an article called Smart Clothes, CQ-VHF, the February 1997 issue of IEEE Computer, or seen him on the October 1996 episode of Scientific American Frontiers on PBS called Inventing the Future. He is interested in connecting with other serious amateur hobbyists pursuing like or similar technologies. See his World-Wide Web Page above for more information.]

April Moell WA6OPS

emcom4hosp@aol.com

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently-Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

Joe Moell K0OV

homingin@aol.com

Homing In Column World-Wide Web Page:

http://members.aol.com/homingin/

(Homing In is a column in 73 Magazine featuring information about radio direction finding, hidden transmitter hunting, and jammer tracking.)

This site features:

* Southern California T-hunting, what equipment the winners use
* International-style foxhunts have come to California
* Complete design fixes for the Dick Smith doppler set
* Updates to the Moell/Curlee book (TRANSMITTER HUNTING---Radio Direction Finding Simplified), including board/kit/parts sources and building tips
* Frequently-Asked Questions (FAQ) and answers from the Homing In

mailbox
* Index and subject list of all Homing In columns in 73 Magazine
through September 1996 (over 90 articles)
* And lots more...

I have scratch-built all my antennas for all bands, written antenna programs, and experimented with many types of antennas over the past 38 years. I have been a ARRL VE for 5 years now, as well as team leader. I started in computers by building the Altair in about 1968, later switched to Radio Shack. In 1982, I started assembling Clones, and still do to this day (for a living). I have written code in Basic, Quick Basic and C.

I have built power supplies, both low-voltage-high-amperage and hi-voltage-low-amperage. I have wound my own transformers, one of which still runs my VHF station after 20 years of use.

It is very hard to pin-point what one knows, as we are constantly learning. Also, we must remember the old adage, "USE IT OR LOSE IT."

I am an NTS operator running an unattended digital (Express, Winlink equivalent) digital system. I operate a hub station for Eastern Canada Digital operations, including AMTOR, PACTOR, and CLOVER.

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet, as well as system administration of UNIX and UNIX-like operating systems (with an emphasis on networking, E-mail, etc.). My current concentration is on writing UNIX based tools (e.g. software for logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an E-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message body. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message body:

subscribe dx

I am involved in training for new and upgrading Hams, paying back for Elmering received over the years as I came into Ham Radio. I am a VE for VEC's active in local area. I am most interested in assisting young, old, and handicapped persons to discover Ham Radio. However, I want to help anyone that is committed to getting a Ham license or upgrading. I am most active on Ham satellites, mobile and fixed HF, Digital modes and construction. I am an avid electronics constructor, repairer and experimenter. I am trying to sample all modes, bands, and interest areas. I am also skilled in Public Relations, demonstrations, and "de-mystifying."

Dakota County, Nebraska ARES Emergency Coordinator (EC)

ARRL Official Bulletin Station (OBS)

I have been involved in Packet since 1984. I currently run a Packet BBS with the F6FBB software, as well as a number of Packet Nodes using TheNet Software. I have coordinated the Volunteer Exam Session in this area for a number of years. I operate 2 meters and HF, both CW and SSB. DX'ing and Contesting are some of my activities, along with collecting prefixes.

I have had NWS spotter training and am part of organizing the spotter network in the Siouxland area. AS the EC of Dakota county, I work with the Woodbury County, Iowa EC in the spotter effort.

During my business activity as a Systems Engineer with IBM, I have developed some expertise in PC's and have worked with the DOS, Windows and Windows 95 Operating Systems along with many Ham-related applications.

I have organized a number of Ham events such as Packet Symposiums and am the current Chairman of a Regional Ham Radio Convention.

I have considerable experience in computers, some in packet, with an informal training in electronics. My background includes electronic surveillance countermeasures such as looking for interesting signals or wire connections with spectrum analyzers/receivers and TDR's, etc.

I'm not very active in operating, but have had a fair amount of experience when young.

I would prefer dealing with people in my local area, since many well-informed experts are available via the Internet.

Educational Advisor to the American Radio Relay League

I specialize in developing growth in volunteer organizations and have published and made public presentations on this subject.

I have written and published training/educational curriculums for Novice, and Tech Plus amateur radio licenses. Of interest is the fact that amateurs licensed through my courses are very likely to upgrade as evidenced by the high number of hams in the Lawton, Oklahoma area that hold Extra Class licenses.

More recently I have been involved in securing building permits in Florida to put up amateur radio towers in this highly restrictive State.

The Netherlands CompuServe: pdreynolds@compuserve.com

http://www.xs4all.nl/~pdr123/pdr-home.htm

I am very lucky in that I earn my living in radio communications, so
my expertise is fairly broad (but not focused on amateur techniques
only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over
the years. I always enjoy discussing and researching a communications
problem so if you don't see it listed above drop me a line anyway,
especially if you happen to be in Europe.

I am the Assistant Principal at Estill County High School in Irvine, KY and have been in the education business for the past 23 years. I enjoy helping people earn their ham radio license privileges. I have a test team with the WCARS group and have been testing for a good number of years. We have tested over 300 hams during the last three years.

I also have been in the repeater business since 1973 (146.820) and have held a ham license longer that any other resident of Estill County Kentucky. I am the fourth ham to be licensed in our community, the other three have either become Silent Keys or moved from our county. I am very proud to have held a ticket for almost thirty years. I hope through my experience with the local emergency team, I can also provide advice on EMS. I founded the local Rescue Squad in 1978 and am still President of the corporation. I was also the local DES Coordinator from 1977-1993.

Chuck Rippel WA4HHG

crippel@exis.net

Secretary, Collins Collectors Association

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-mail at my address above.

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send an E-mail message to:

listserv@listserv.tempe.gov

Leave the Subject header of the message blank and in the body, simply type:

subscribe collins

The listprocessor will output an E-mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins afficionados everywhere. Enjoy!

* Novice/Tech Instruction
* Portable
* QRP
* VHF
* Volunteer Examiner (W5YI)

I suspect that I would be classified as a "classic" amateur operator.
While not a proficient homebrewer/RF designer (yet), I pride myself on
the ability to construct equipment from kits, as well as being able to
competently debug and fix the equipment I use - this is a set of

skills that is becoming too rare in our "appliance operator" world.

While many see a need to run high power and large antennas, I do not. I live in a development with antenna restrictions, and I choose to not expose my family and neighbors to high RF fields.

This has led to my love of QRP (low power) operation. Working from the eastern U.S. into Germany at 100 Watts is pretty neat - but to do so on 1/2 Watt? A flashlight uses more than that, and it's being seen some 4,000 miles away, AFTER bouncing off the ionosphere TWICE!

I also enjoy an occasional contest, although I am more relaxed about operating than the annual "winners." I always operate on Field Day with fervor, last year assisting the University of Maryland in making 205 QSO's (most of them CW) at 4 Watts of output power into wire antennas.

I greatly prefer CW over phone. I can frequently be found on 2m repeaters during trips and the drive to and from work.

I have confirmation of contact with 138 countries and have earned my WAS and WAC awards. I have been a Volunteer Examiner since age 18, and a ham since age 15.

I get a great deal of joy from watching others learn something new, and then embrace it as their own. Ham radio is a wonderful way to become involved in public service and a great, technical, hands-on hobby that can lead to careers and a lifetime of enjoyment. I find great pleasure in making others aware of it.

Henry Ruh KB9FO

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can Elmer on most subjects, but not spread spectrum or packet.

I have nearly 30 years experience in electronic/computer service work. I enjoy designing, building, and operating vacuum tube and solid state equipment. I restore, test, repair, and operate antique radio equipment. The maximum power I use for daily operations is always below 100w, and most of the time, I operate at QRP (5w) or less! (More with less.) I have a real enthusiasm for building just about anything from nothing, as part of the homebrew aspect of the hobby. When not working DX, enjoying a good contest, or have a great time on Field Day, I watch over my 6m repeater, or work VHF packet. I am glad to be of help to those in need! I fully support the Elmer program as a means to bring new people into Amateur Radio. I teach Novice and Tech classes for aspiring Amateurs. I am also a merit badge instructor for the scouting program, and the advisor for the Bloomsburg University Amateur Radio Club.

I can help people with HF stuff, cheap antennas, and am willing to
help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service
their own equipment. I would like to see a turn-around here...

I have been licensed for almost 20 years and have seen quite a bit. I deal mostly with helping new hams get going on HF including helping with antenna projects, etc. I have taught novice classes in the past and continue to do so. I also have extensive experience with the VEC program including starting the Dunedin ARA VE team.

Internet Services (Finding FAQ's, using Usenet, FTP, telnet, Archie, FTP mail-servers, mailing lists, etc., etc.)

Club Activities, Examinations, and other events in the Omaha/Lincoln/Council Bluffs (Eastern Nebraska/Western Iowa) area.

Also willing to provide newsreader kill/select file help to anyone interested in customizing their presentation of the rec.radio.* newsgroups

I would be particularly interested in mentoring/training new FAQ/Info maintainers for the rec.radio.* newsgroups (see also Jack Hill and John Seney for FAQ maintenance opportunities and the rec.radio.amateur.* Working Group mailing list). To paraphrase Zack Lau, I can't post it all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ management and posting package from Ian Kluft and would be happy to guide new FAQ authors in its use. The latest version, 3.2pl2, is available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message body. An acknowledgment message will follow shortly. To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol.

I attempted a literature survey as well as some software simulations of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography (available on request). More information about MACA may be obtained from:

- ---

http://red-agnes.la.ca.us/~js/

For hams that are interested and live in my area, they are welcome to
login to IBBS. IBBS is a full-time UNIX-based computer that is
dedicated to ham radio. I carry a full rec.radio.* news feed and
E-mail. There will never be a fee for anything.

Over the past 10 years I have operated from 160 M - 23 CM and would be willing to answer any question a new person to the hobby has. If I don't know the answer, well, NASA is only two blocks away. :-) I live and work here at Edwards Air Force Base, CA. I am also very active in SAREX.

Courage Center
HANDI-HAM System
3915 Golden Valley Rd.
Golden Valley, MN 55422
USA

Manager, Courage HANDI-HAM System

I have information pertaining to Amateur Radio and physical
disabilities or sensory impairments, such as blindness.

Visit us on the World-Wide Web:

http://www.mtn.org/handiham/

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham
radio books and publications on audio tape. Volunteer readers provide
a valuable service to persons with severe physical disabilities and
sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with
hobby terms and expressions. A clear speaking voice and the ability to
read the written text of Amateur Radio books and describe the diagrams
and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new
volunteers, as well as a copy of the book to be read and cassette
master tapes. Readers will need a good-quality cassette tape recorder
and a quiet place to record. Some of the books we would ask readers to
tape would be ARRL license manuals, special interest Amateur Radio
books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace,
as long as there is a quiet place to read. It is a wonderful way to
share Amateur Radio with others!

AA9PW Amateur Radio Exam Practice World-Wide Web Page:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

This WWW site allows users to practice for the US Amateur Radio examinations on-line. The written examinations for all five classes, novice through extra, can be generated complete with figures, filled in on-line, and then graded. The results are presented question-by-question, and also graphically by subelement, so that users can identify areas which require further study.

More advanced options include saving the results of each examination a user takes on-line. These results can be used to monitor progress and also as a basis for generating exams tailored to a user's needs, ensuring that all questions are practiced.

Exams can also be generated and E-mailed to users without WWW access:

Send E-mail to exams@eeyore.biochem.mcw.edu with a line in the body of the message like:

generate novice

This will result in a novice exam being generated and E-mailed back to you with the answers included at the end of the E-mail. These exams lack the figures, so reference to a printed copy is advised! Simply replace "novice" with any of the other exam names (technician, general, advanced or extra) to get the other exams. To request multiple exams in one E-mail, write multiple "generate" lines.

Other exam resources such as the question pools, copies of the exam figures, and FCC Part 97 are also available. A comprehensive help page exists to guide users through the facilities of the site. All

questions and queries are welcome!

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited
equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when
the baby is asleep, so the XYL demands silent running. Besides, with
my wimpy wire, there is little point in trying to run voice.

ARRL Official Emergency Station (OES) and Local Government Liaison

I have experience with antennas (calculations, construction, and repair), all HF digital modes (including HF FAX), wiring of TNC's to radios, custom switchboxes for TNC's, radio modifications, math calculations, personal computers (DOS, Windows, Networking, and HTML), and of course, on-the-air operation and CW. I would love to work with young students wanting to become hams. I hope I can help.

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (The Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that

anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

* Homebrewing
* IBM PC's
* Internet Services

I used to run my own bulletin board system before the Internet came along. I also do my own monthly newsletter called the _Hamband DX'er_ for many years. It is still going. I take care of the ARRL SWL Bureau. My name is listed in any callbook under the various QSL bureaus. I am

an avid DX'er of the ham bands with over three hundred countries confirmed. Presently I run my own WWW Page to help others with QSL info requests.

DX QSL Info World-Wide Web Page:

http://www.coredcs.com/~mtw/

The DX QSL Info File is updated monthly. It is in Xbase format and runs under a variety of software, including:

* Dbase
* Vplus
* Totalham

Elmers List Formatting Standards

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I

politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software or "browsers".

For more information about URL formats, see:

http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis E. LeMay (K0GRL, W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs, including those within TAPR (Tucson Amateur Packet Radio), have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

What is an Elmer?

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer Today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

How do I become an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers may register via my formatted, on-line, World-Wide Web Registration Form:

http://www.novia.net/~pschleck/elmers/register.html

I would prefer that you register using the above form (which not only ensures that nothing is omitted, but also makes adding your entry much easier by automatically converting it to HTML). However, volunteers who are not yet on the Web are also quite welcome, and may register by writing me at elmers-request@novia.net with their name, amateur radio callsign(s) (if any), E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages, FTP archives, mail servers, or mailing lists, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message when posted to Usenet News). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt.

Also, an unfortunate increase in the amount of unsolicited junk-mail that I receive (often dozens of messages _every day_) has forced me to become much more ruthless about filtering incoming E-mail. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not only

not get reviewed for some time, my incoming mail filter (procmail) may even throw it away if it can't be automatically categorized as originating from known, friendly senders or have known, welcome keywords in the headers ("Elmer" is obviously one of those keywords).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use the Mailing-List or Mail-Server options:

World-Wide Web (WWW):

This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

* http://www.novia.net/~pschleck/elmers/
* http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
* http://www.cs.ruu.nl/cgi-bin/faqwais *

(_Note:_ Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

Usenet News:

This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of _"Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*],"_ and

"Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

* news:rec.radio.amateur.misc
* news:rec.radio.info
* news:rec.answers
* news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

Anonymous FTP:

If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

* ftp://ftp.novia.net/customers/pschleck/elmers/
* ftp://ftp.cs.buffalo.edu/pub/ham-radio/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

Internet Gopher:

The latest copy of the list should be available from the following Gopher sites:

* gopher://jupiter.sun.csd.unb.ca/
* gopher://gopher.univ-lyon1.fr/
* gopher://ftp.win.tue.nl/
* gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

Mailing-List:

Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

Mail-Server:

If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

ftpmail@ftp.novia.net

and in the BODY (not the Subject) of the message, write:

```
open
get /customers/pschleck/elmers/README
get /customers/pschleck/elmers/index/subject
get /customers/pschleck/elmers/index/geographic
get /customers/pschleck/elmers/list/part1
get /customers/pschleck/elmers/list/part2
get /customers/pschleck/elmers/list/part3
get /customers/pschleck/elmers/list/part4
get /customers/pschleck/elmers/list/part5
get /customers/pschleck/elmers/diff
```

Alternatively, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

```
send usenet/news.answers/radio/ham-radio/elmers/README
send usenet/news.answers/radio/ham-radio/elmers/index/subject
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/list/part5
send usenet/news.answers/radio/ham-radio/elmers/diff
```

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

Acknowledgements

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

John Ackermann N8UR

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 baud one now.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the

networking picture, how to link areas using different networking schemes, how to set network parameters, etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details about the Net-SIG (including upcoming conferences).

TAPR Vice President and Board Member

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

[_Editor's note:_ All ampr.org coordinators are listed in the document at:

ftp://ftp.ucsd.edu/hamradio/amprnets

David Andrews ZL2SX

andrews@clear.net.nz

I have been involved with the Amateur Radio International Travel Host scheme. I also chair the NZART Frequency Management and Technical Advisory Group, which is responsible for all repeater coordination and band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would be pleased to answer any queries with regard to reciprocal licensing or frequency coordination that may arise.

Jeff Angus WA6FWI

jangus@skyld.grendel.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few nodes, And, I have successfully installed UUPC/extended 1.11k and SNEWS for those MS-DOS afficionados out there. SCO UNIX, Win95 networking information available.

425 DX NEWS Weekly Bulletin WWW PAGE (NEW SITE!!!)

- ------->> http://www-dx.deis.unibo.it/htdx/ <<---------

NEWS, INFO, RUMORS, DXPEDITIONS, IOTA ACTIVITIES and more

DX CALENDAR, WABA AWARD (rules & scores) now available

in English Version and Italian Version

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in love with RS sats and DOVE telemetry. I'm the Shortwave Listening (SWL) coordinator of the Italian Amateur Radio Association and I have a regular SWL page in their official magazine Radio Rivista. Recently I joined the 425 gang that produces the 425 DX News bulletin. I translate it into English and send it to many DXers via E-mail. I also maintain a WWW page to provide the bulletins graphically with previous numbers and more to come. I've been an SWL since 1974 when I received a receiver as gift from my parents. Now I'm 36 and I'm running also a free BBS devoted to HAM/SWL.

Jon Bloom KE3Z

Jon Bloom, KE3Z | jbloom@arrl.org
American Radio Relay League | Justice is being allowed to do whatever
225 Main St. | I like. Injustice is whatever prevents
Newington, CT 06111 USA | my doing so. -- Samuel Johnson

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are _essential_ to its ongoing success, so please drop by and say hello!

QEX Editor

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the

current server.

Please direct all other feedback, submissions and administrivia
regarding these services to my E-mail address above.

I have been with Linux since it was first available. Have been a keen
homebrewer for over 30 years, but I don't do much now due to lack of
time. I hav built lots of HF gear, including synthesized gear, and
also a lot of test gear. I have also homebrewed magnetic loops, which
is great fun. I have put together PC's and help other people with
Linux issues. On packet, I run TCP/IP using LNET which is
WAMPES-adapted for the UK by Darryl, G7LED.

Our club offers CW training opportunities and we are working on
starting some theory classes but there are plenty of active Elmers in
our group despite our lack of organization to date. We also have VE
sessions and would be glad to help anyone in the area who is
interested in amateur radio.

I am especially interested in VHF/UHF and microwave amateur bands as well as Amateur television. I am treasurer and a founding member of the newly-formed Triangle Amateur Television Association in Raleigh-Durham-Chapel Hill, NC. I am willing to share my expertise in the following areas:

* ATV - Getting started, starting local activity, repeaters.
* VHF/UHF - Propagation, what you need to get started, operating portable, contesting, weak signals, and DX.
* Sealed Lead Acid Batteries - How to take care of them.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111, USA. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the ARRL Info Server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111, USA. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many EMI/RFI files are also available from the ARRL Info Server. See Mary Carcia's entry for more information.

ARRL Technical Information Service Coordinator (tis@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a

particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many TIS files are also available via the ARRL Info Server. See Mary Carcia's entry for more information.

See Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

I am a Civil Engineer by training and a DX'er by choice. My Elmer taught me how to work pile-ups and how to build antennas, having put up 12 towers all over 100 feet. I know what it takes to get a tower up. I don't climb anymore, but have a lot of info. I like working on antennas and have several big Moseleys up in the air. It would be great to pass on what I have learned, as we are not all born knowing how to do everything, and the older I get, the smarter my father gets.

* ARES/RACES/SKYWARN
* CW
* Field Day
* HF/Contesting/DX
* Novice/Tech Instruction
* RFI
* Seminars/Lectures
* Volunteer Examiner (WCARS VEC)

I've been licensed over 25 years. I was one of the first VE's certified by WCARS VEC. I have served for several years as a proofreader for the NCVEC Question Pool Committee. I work closely with the WCARS Directors, and am an active VE with that organization

I have been involved with Emergency Communications and Traffic handling from almost day one, having earned my first BPL at age 16 as a novice. I have served as Assistant EC, County EC and currently serve as District Emergency Coordinator for ARES/RACES and District Radio Officer for Emergency Management Area F of North Carolina. I also coordinate SKYWARN activities in our area.

I have served as Hamfest chairman, assistant chair, etc., as well as an officer of the local club, the Western Carolina Amateur Radio Society. I designed our homepage, am quartermaster of club equipment, and carry the keys to the club repeater. I frequently teach both theory and code for local Novice/Tech classes.

I have been Field Day Chairman for five years, serve on the RFI committee, hold WAS Awards both as a Novice CW operator and SSB Extra Class, a DXCC with 86 of them worked as a Novice. I am also the National Board Chairman of the Geratol Net, a WAS net which meets nightly from October thru April. I also am chairman of the local club's packet committee.

I "dabble" in helping newcomers make dipoles and other simple HF antennas and am frequently a new licensees first contact. (A debt I am repaying to my three trusty Elmers of so many years ago, two of whom are now silent keys)

I would be willing to help in these general areas on-line or close-by on the phone or in person. (I am a college professor by trade)

Mobile Antenna Systems and Installation (Primarily HF)

* power distribution
* frame grounding
* antenna selection and construction
* mounting the rig
* useful accessories
* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@theporch.com (*)
* rra-wg@theporch.com
* glowbugs@theporch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an Extra class amateur license. I got my first ticket when I was 14 years old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General, and teach CW at least once per year. I am also the VE team liaison for the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

Civil Air Patrol (CAP)

I was Communications Officer and former unit Landstation Bluebird 284, 1980-87. Statistically, Landstations are relatively rare. A land station in CAP is an HF-capable station operating from both mobile and permanent locations as needed. As a land station, I checked into several regional nets for the Missouri Wing of the CAP. I am familiar with the CAP emergency protocol as well as MARS and ARRL. Also, I have extensive teaching experience for Novice to General levels and currently am a teacher.

I am an Advanced class operator, working on Extra. I work professionally as a manager of a computer services department in a large hospital system with more than 12 years experience in PC and Host Systems networking, I hold a degree in Electronics Engineering, as well as many hours in Computer Science Engineering. I operated a land-line BBS for 8 years, and now maintain a packet mail drop on 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of North Texas home page on the web:

http://www.why.net/home/kb5ylg/tcarc/index.html

and am the 1996 President of the TCARC. I am also the appointed Emergency Coordinator for the City of Azle for Tarrant County RACES.

I like to give talks to Amateur Radio Clubs, school groups, Scouts, and similar groups, mainly about Amateur Radio topics. Recent presentations I have done include Field Day preparation for clubs,

Computers and Ham Radio, Building Your First Dipole. I'm open to presenting other topics as well. I also help local amateurs to prepare their own presentations and talks.

I am a Baptist minister, and would be delighted to administer a Ham Radio theme wedding! <grin> I would also provide ministerial services for Ham related special events.

I will also provide free Novice/Tech licensing instruction for groups of 5 or more in the Tarrant/Parker/Wise County region of North Texas. Typically this involves about 18 hours of lecture, and some self study on the parts of the students. I'll do this free for nonprofit endeavors.

P.S. I monitor 146.98 Boyd repeater while commuting, and you might find me working HF CW just about any time.

Ham Radio and More http://www.tapr.org/hrm/
Rain Report http://www.tapr.org/rain/

Via TAPR's FTP site

The TAPR Software Library is now available via anonymous FTP. You can
access the library at:

ftp://ftp.tapr.org/tapr/

Log in as:

anonymous

with your E-mail address as password.

Via TAPR's Listserv (http://www.tapr.org/tapr/html/internet.html)

TAPR maintains several SIGs in various interest areas. To get the
latest list of SIG groups, send an E-mail message to:

listserv@tapr.org

with the subject line:

Request

and one or more of the following in the body of the message:

list

for list of mail groups on TAPR.ORG

information listname

(where listname is the name of the mail group)

to request the information on any mail group

subscribe list your_first_name your_last_name

(where list is the name of the mail list you want to join and
your_first_name and your_last_name are your first and last names,
respectively)

to subscribe

Some of the current SIGs include:

NETSIG Regional Networking SIG
BBSSIG BBS SIG
HFSIG SIG on HF Digital Topics
DSP-93 SIG for those that are building TAPR AMSAT DSP-93 kits
APRSSIG SIG on APRS
TAPR-TNC SIG on TNC Issues
DSP SIG on general DSP topics
MIC-E SIG on supporting the TAPR APRS MicEncoder kit

TAPR-BB Announcement channel for TAPR bulletins and information

General Information about TAPR:

* Ever heard of a TNC?
* Interested in general packet radio information?
* Interested in Spread Spectrum Communications?
* Interested in high-speed packet operations?
* Interested in other types of digital communications?
* Interested in experimenting or building kits?
* Interested in keeping up-to-date on national digital and packet
issues?

Then you might be interested in TAPR!

Goals:

* Support Research and Development efforts in the area of amateur
digital communications
* Disseminate information on packet and digital communications
* Provide affordable and useful kits for experimenters and hobbyists
* Pursue and help advance the amateur art of communications through
publications, meetings, and standards

History:

If you have used a packet radio TNC, then you are already a part of TAPR history.

The TNC (Terminal Node Controller) project was the first big project that TAPR tackled and completed. Now TAPR covers a wide range of interests including: APRS, Spread Spectrum, networking, Timing, DSP, HF, and much more.

TAPR was founded in 1982 as a national organization with interests in the areas of packet and digital communications. Today, TAPR continues as a membership supported non-profit amateur educational research and development organization. TAPR currently has more than 2500 members, worldwide. TAPR continues to develop kits for the amateur community and is working actively on publications and communications standards.

Membership:

Membership in TAPR includes a subscription to the quarterly published Packet Status Register newsletter. PSR has been published since 1982 and is recognized as an authoritative source for up-to-date user and technical information on packet radio. Much of the material in PSR is timeless. Back issues may be obtained from the TAPR office. Membership in TAPR is $20 US for one year in USA, Canada, and Mexico. Outside North America is $25 US.

Join the amateur digital-revolution -- Join TAPR!

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://people.qualcomm.com/karn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://people.qualcomm.com/karn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting relatively wide-band digital modes on band occupancy and throughput (i.e., What gets optimized? Are there tradeoffs in quality vs. quantity?) in the context of the spread spectrum rules debate, but I think it needs to be a much wider discussion. See my reply comments to the FCC on this issue:

http://people.qualcomm.com/karn/papers/index.html

(See also Steve Bible for more information on Spread Spectrum)

[_Editor's Note:_ I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

Co-Moderator, LARC Public E-mail Reflector:

larc@seta.fi

If you're not already on LARC's E-mail reflector, you're welcome to subscribe, even if you're not a member of LARC. All you ever wanted to know about our E-mail reflector, including instructions on how to subscribe and unsubscribe can be had by sending an E-mail to:

majordomo@seta.fi

with the following line appearing by itself in the body (not the Subject) of the message:

info larc@seta.fi

The Lambda Amateur Radio Club (LARC), is an international club for gay, lesbian, bisexual and transgendered radio, electronics, and computer enthusiasts (and their friends). Membership is open to all who are supportive of sexual minorities.

Members receive our newsletter, the _Lambda Net News_ each month, learn about our public service activities, keep track of our weekly activities such as Internet Relay Chat (IRC), and follow the planning and may even participate in our fourth LARC-sponsored DXpedition-Caribbean vacation in 1998.

If you'd like to make many new friends, consider joining our club! We'll be happy to mail you an application right away. Just send an E-mail request for an application to:

larc@net-quest.com

OSCAR (Orbiting Satellites Carrying Amateur Radio)

I have been an active satellite operator on both high-orbiting (elliptical and low orbiting satellites (LEO) since 1990. I hold satellite DXCC #85 and I currently have 210 countries confirmed on satellite. I enjoy both CW and SSB and DXing. I am a member of AMSAT.

LARC has sponsored three DXpeditions to the Caribbean focusing on satellite operating.

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 (602) 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous FTP server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100
callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly
into the QRZ! Callsign Database, where it will be published on both
CDROM and on the Internet. When you use this page, your E-mail address
is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the
server. There are no charges or listing fees, and it's free to all
radio amateurs. The procedure takes only a second, and you are only
asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is
now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can
begin operating as soon as your callsign shows up in the online
database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail
address above.

2235. Trouble with Visar

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-04 00:00:00 UTC
From: Curtis Wheeler <cwheeler@ccnet.com>
Message-ID: <33E60B2B.D72@ccnet.com>
Source record: 192385
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I am having a problem with some Visars in part 91 operation. I thought I would ask among hams that are either using the Visar handeld for ham ops - or perhaps some of you work with them professionally.

Is any experience audio problems with UHF (450 MHz) Visars? We have a number of them that are transmitting really dirty audio. They are within limits on deviation but they are so noisy that sometimes you just can't understand the person transmitting.

I have contacted my Motorola rep. But as of yet he has not found anything on known service troubles on the Visar audio.

Respond by e-mail if you wish.

Thanks.

>My daughter passed the Tech Plus when she was eight, I passed
>the General when I was 14, how hard can it be?

Any of today's license tests are amazingly easy when you.

1. Have the qeustion pools

2. Have read any books by Harry Lorraine or Tony Buzan.

In <5s4kki$p7l@jupiter.planet.net> billsohl@planet.net (Bill Sohl) writes:

>on the non-,e,ner to take an active role. As I've said yesterday, the
>ARRL represents all hams today because no one else is doing.

That is nonsense, Bill. You don't represent everyone because you get one vote and that is the only one cast (well, at least not in the US .... so far) I think you miss the important point being made. IF the ARRL is interested in the ham radio and not the little niche held by its membership, there is an onus on IT to bring more into the fold. This can be accomplished by openness and candor about its objectives. Like I have said, that is sometimes practiced (Fried Heyn does it) - but there is a common perception that this is not the general case with the hierarchy of the ARRL. Why don't you discuss that, instead of these semantic issues with the word "representative"? The issue remains however you define the word. The ARRL could use more members, the VAST majority of hams do NOT join, and the ARRL has great potential to represent hams in a broad sense.

Many have the perception that the ARRL does not serve their needs. I do not dismiss them all as nuts. Perhaps you do. However, you might need to dismiss an awful lot of hams to make that point of view work.

AND, maybe we should change the title of this thread, the current title is really terrible.

2240. Re: Many questions from a CURRENTLY unlicensed person

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-04 00:00:00 UTC
From: sdickson@iamerica.net*SPAM-HATER
Message-ID: <33e63431.26439194@news.iamerica.net>
Source record: 192390

Todd,

I've been pursueing my license for about 2 weeks, will take the test on the 9th. I've found most of the things I need on the Internet, including exam sessions.

My suggestions to you are (this is how I did it, really!):

1. http://www.arrl.org/
The Amerian Radio Relay League's website. They also publish the magazine QST.

2. http://www.arrl.org/newham.html
This page in particular will help you find the information you will need to get started. Note the link near the bottom of the page to find an exam session.

3. http://www.arrl.org/divisions/roanoke.html
Since you live in North Carolina, you are in the Roanoke Division of the ARRL. This is a list of the section directors and managers. Get in touch with your section manager (state manager) His name, address, phone, and e-mail are on this page. If you don't get the results you want, go up the chain, so to speak.

4. http://cust.iamerica.net/jragsdal/ham.htm
If you want to learn Morse code, this is a BIG help. Download the TUTOR program (really small, like 40k) It must be run in MS-DOS mode. I've learned the code in about 3 weeks using this tutor program.

5. Don't get discouraged! Go to the public library. If it is still indexed by the Dewey decimal system, look in the 621.xxx range. You should find many books about ham/amateur radio.

6. http://www.arrl.org/field/club/
This is a page for ARRL Affiliated clubs. There is a link to a search for clubs in your area. Get in touch with one of the officers of some of the local clubs. ------ My opinion - if you are not well served by one or more of these clubs, remember it when/if you choose to join a club.

7. The ARRL has an information server setup. I've forwarded 4 e-mails to you that have details about this service.

8. http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html
You can get practice exams via e-mail here. A request will have the practice exam in you mailbox in minutes. I've gotten several, the questions are random from the pool.

If I can help further, please let me know.

--Scott

>speaking on behaf of ALL amateurs, including Drew. So I recommend that
>Drew and his band of internet crybabies join ARRL, and spend some time
>and energy working from within, and maybe some of Drew's good ideas will
>become reality.

Unfortunately, John, Spew will never join the ARRL. See, if he joined
the League, and attempted to "work from within", he would find that his
extremist views are not supported by a majority of people, and he would
be unsuccessful in implementing change.

Instead, he uses a tactic similar to that many special interest groups...
Claim victimology/racism/some-other-injustice, blame it on whatever
political agenda they want changed, and continuously whine. Eventually,
people will get so sick and tired of listening the the whining that
they will just go ahead and make the change just to shut them up -- sort
of how when a child cries continuously for a toy eventually a parent
will give it one just to shut it up.

>>TONIGHT WAS A NIGHT WORTH WAITING FOR.
>>
>>IN A RECENT CHIEF NAVY-MARINE CORPS BROADCAST, THE CHIEF NAVY-MARINE CORPS
>>MARS ANNOUNCED THAT DOD HAS AUTHORIZED CW NETS AGAIN.

>Snippo

You snippoed out a very relevant portion of the note:

NO I AM NOT JUST HUNG UP ON CW FOR THE H__L OF IT. I WAS NECOS OF A
NAVY-MARINE CORPS VOICE (SSB) NET EARLIER THIS EVENING AND COULD NOT
HEAR MANY OF THE STATIONS ON THE NET. WITH SIMILAR CONDITIONS (LOCAL
THUNDERSTORMS) I WAS ABLE TO COPY A MULTI ADR MESSAGE SENT THREE HOURS
LATER VIA CW. IT IS REALLY TRUE THAT CW CAN GET THROUGH BETTER THAN SSB.

YES I KNOW THAT NOT ALL HAMS CAN READ CW THROUGH THE NOISE, BUT THOSE
WHO CAN FIND IT EASIER THAN SSB. WE HAD THE MESSAGES PASSED WITH SOME CHAT
TIME AFTER THE NET. I HAVE SEEN VOICE NETS TAKE LONGER TO HANDLE LESS
TRAFFIC. MAYBE THE WISDOM OF USING A SYSTEM THAT WORKS MAKES SENSE AFTER
ALL.

>I think we can say, As long as we have geezers, we will have CW.

I wasn't able to determine his age from the above. But it seems to make
sense that if a message can't be passed via SSB, that the MARS operators
have the option to use CW. How can you find fault with that? Would you
rather the message be delayed until voice conditions improve?

>What I don't understand is why these geezers don't ride horses.

If they found that horses proved as easy and as fast as CW, then they
might consider it. After all, getting a message through to the addressee
as quickly as possible is their prime mission; what mode they use to
meet that challenge is irrelevant.

I agree, Stan, I would not vote for any candidate for ARRL Director who
was not active across in the ham-radio workings in the Division. A
candidate who is willing to travel to clubs to get his or her message
across is the one who will travel to clubs after the election to hear the
concerns of the members.

Which is exactly how the no-code Tech license came to be. If we had left
it up to YE OLDE FAHRTZ at the ARRL (who opposed the creation of such a
license at every turn), Morse would still be required for all grades of
licenses and the VHF/UHF bands would have been taken over by commerical
interests by now, due to lack of amateur usage.

Fortunately, those who think as you do are not calling the shots.

Unless he is using the new ICOM, or either of the SGC radios which are
also type accepted for both marine AND amateur bands, or maybe he is in
Civil Air Patrol, which is outside the amateur band also. In any of these
cases he is still getting a "great start", which in this day and age is
doing anything that does not involve watching TV.

> suspicous that you're unlicensed and have stumbled across some VHF/UHF
> gear.

I don't share Gary's suspicion. You are asking a question that can be found in number of publications - and you don't need a license to get them.

From what you describe I assume that you want to know about transmit offsets for use on repeaters.

Repeaters are stations that automatically retransmit another stations signal. They are used in many radio service beyond amateur. It has to receive a signal on one frequency, then retransmit on another. The repeater does not transmit and receive on the same frequency - so to use the repeater effectively you must configure your station to transmit on one frequency and receive on another. The right ones.

Normally you configure the receive portion of your radio - this is the repeater's transmit frequency. The you program your radio's "repeater offset" or "repeater split". In the case of 2 meters, the split is generally plus or minus 600 KHz, and for 70 cm it is normally 5 MHz.

The reason why some may work and some may not is that you need to now if the offset is "positive" or "negative". In other words, when you transmit on 70 cm are you transmitting 5 MHz above or below the receive frequency. If the offset is set wrong you will be transmitting on the wrong frequency which can cause harmful interference. On most radios if the offset result in the radio attempting to transmit "out of band" you will get an error on the display. For example if I set my UHF for 446.750 with a +5 MHz transmit offset the radio will try to transmit on 451.750, outside the amateur bands. Mine won't, but most radios will give an "error" on the display because it's configured it to transmit beyond the ham bands.

The above will generally apply to out-of-the-box, comercially made amateur radios. With other land mobile radios you could conceiveably configure the radio to do things that could get a ham operator in trouble. Of course doing pretty much anything with an amateur or land mobile radi could get an unlicnesed person in trouble.

Figuring split on the 440-450 band is pretty straight forward with some rare exceptions. Figuring splits on 2 meters can be more a matter of local band plans and repeater coordination.

From: sweeper44@aol.com
Message-ID: <19970804003900.UAA14121@ladder02.news.aol.com>
Source record: 192495

I'm having a problem with a amp!!! The problem is, with the amp on, I can't reach a distant repeater. With it off I can just make it but I'm unreadable. The preamp works get but with the power on I can't seem to make the connection. I'm using 5w on a Mirage 310-g. I tried it on the alinco dr 590/yaesu ft 5100/ft 2200/ft 51 and on different antenna connections all with the same problem.

I just bought this amp last week and will call mirage next week if the problem can't be solved. So until then any and ALL help will be deeply appreciated.....

I have an original "Instruction Book"for a Collins 75A-3 Amateur
Receiver. It is in VG to EX condition with the registration card
still in the manual. The publication date is April 15, 1954.
I got it with my 75A-3 in about 1958. Wish I the radio rather than
the manual.

Will ship to best offer.

Please email hilandd@juno.com for more info.
Doug in St. Paul, MN

Most of what I know that's worth remembering,
I learned the hard way or from PBS.

>Amateurs, they would listen to non-members as well as members.

With all due respects, in the absence of any other voice, the fact
remains tat ARRL does speak for ALL of ham radio in the US.
Now anyone that's seen my comments on the code test know full
well that I totaly disagree with the ARRL on that one, but I
recognise that no one else takes the entire ham radio hobbyist's
(service or whatever you want to call this) interests in an
overall sense. And, as mentioned already, unless others
speak out, then the ARRL is the only voice being heard and, therefore,
THE representative voice.

>Chain pulling?

Those who know me well would know I a great lover of the harmless practical joke. In once, disguising my voice, called John Hennessee, a new employee in our Regulatory Information Branch to ask him if it was legal to put a transmitter on my dog. When he correctly answered the question, I then mentioned I was in northern Minnesota and wanted to know what happened if the dog strayed over the border into Canada. The poor fellow didn't know what to say.

>And the ARRL Lab Super's call is _RFI_?
>Can't belive I just noticed that....

It cost me $30.00. My old call was KA1CV. Over the years, I have written a number of articles and such about RFI, co-edited the RFI book, etc. I just had to see that call go to someone famous for CURING RFI, not causing it. It is quite unlikely that I would cause interference; my HF power output is usually +10 dBm. :-)

From: hduff@ica.net
Message-ID: <33e75ba2.0@lightning.ica.net>
Source record: 192301

This past field day I sat down at the CW station to have a turn at
the key (paddle). I immediately realized that the paddle was set up
opposite to the way I have been using mine at home for years...

A couple of the other ops told me that the "proper" polarity is
the opposite way.
I didn't know that there was a convention...I suppose it is
essentially a matter of preference but apparently I chose the 'wrong'
way.
Who, when or where was it proclaimed that there is a standard for
CW paddle polarity ?

Curious, Hugh VA3TO

Do about what Roy? RS was never designed to be a ham store. Nor do they profess to have Electrical Engineers behind the counter. For the most part RS people have always been able to find a part for me, most will call another store if they are out of stock. It's nice to have a local supplier thats open untill 9:00pm when I need a component for a project. Im going to boycott them because they want to use "Shack" as a trademark or registered slogan? Haw haw, how absurd. I don't avoid them at all, one of the only electronic stores to actually SELL ham radios, books, tapes, stuff to promote the hobby and you want to boycott them?

As far as checking for , uh, licenses, I've bought all kinds of stuff from various vendors via mail or at swaps and NEVER been asked for my license! Do you think by RS employees asking for a license this will somehow clean up 2m?or 10m? Your not serious are you Roy?

To Curtis,

I thank you for the information. You answered what I
wanted. I appreciate your message.

To Gary,

Go ride an antenna! Just because someone doesn't follow
protocol by posting with their call sign doesn't mean they are out for
no good. Get a life! If you read Curtis's response, you'll see what
I was asking. I actually DON'T have my license but I am trying to!
If your asshole attitude is any indication of the types of people on
the bands, why bother. Learn from Curtis, get real and get a life.

No more messages on this topic will be replied to so drop it.

I second that. A TTL gate produces enough high-frequency energy to cause a
lot of interference. There's no excuse for not following it with a filter.

I wouldn't have thought that that was ever in question. Given your
situation, however, the question should be is CW the BEST way to get
though noise? The answer is no. Obviously in this case, it is the most
cost-effective (as the system already exists).

> YES I KNOW THAT NOT ALL HAMS CAN READ CW THROUGH THE NOISE, BUT THOSE

> AFTER
> ALL.

Voice provides practically the WORST way of passing messages over the air (except where the content has to explained interactively). It's not suprising that voice nets can take longer than "written" contacts. The more accurate comparison is to compare different text based systems with each other, that is, comparing Morse coding to FEC type coding, for example.

> CW WAS NEVER DEAD AT K5KV AND IS REVIVED AT NNN0LGN.

CW will never die as long as people want to use it (however, compulsion does not engender interest, rather it breeds rejection).

Even so, check your bill. AES overbilled me $5 on an accessory, and added $1
to the bill for no rational reason. They didn't charge me the price that we
verbally negotiated. I'll assume that it was a snafu, but always check the
catalog, or web site to make sure that the clerk offered accurate pricing.

One of the reasons automobile radio shortwave converters are
no longer talked about, is because for many years now auto
radios have be synthesized for 10 KHz AM channel selection.
I.E., they no longer continuosly tune the AM band. As a result,
your auto radio would only be able to 'see' shortwave signals
in 10 KHz jumps.

2283. ft50 / ft10 mods via Hex editing

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-05 00:00:00 UTC
From: slam@bbsi.net
Message-ID: <870799981.19762@dejanews.com>
Source record: 192422

I have made the mod on my FT50 as per your instructions, even if it was my first attempt at using an hex editor... It worked right the first time!

I was not very interested in opening the radio, fiddling with soldering and al, and not much interested either in doing an "pull the cable" transfer type of mod.

Question #1 : I am an owner of both an FT50 and an FT10; Do you know if there is a same kind of hex mod for the FT10 ? I explain: The FT10 as out-of-the-box receives 140 to 174 MHz. Local forest fighters are on 139.950 (50KHz below the lower limit of the FT10...) and i would like to be able to receive their transmissions on this freq with the FT10. Any clues?

Question#2 : I use both radios to monitor provincial police forces, and have to put CTCSS on receive to filter out any digital transmissions they occasionally use. On the FT50, i have no problems scanning with one or more freqs programmed with CTCSS, scanning stops only if the proper CTCSS is received and resumes as soon as the carrier drops or the PL-encoded signal isn't there. But on the FT10, CTCSS decoding seems to "lag-behind" i.e. the radio stops on the CTCSS-encoded channel, opens it squelch even though the signal on the channel is a digital data transmission not PL-encoded. Then after a second, the scanning resumes. Have any clue why the CTCSS decoding of the FT10 is so touchy?

Question#3 : Have any idea on how to tx-expand the FT10 the same manner as the FT50 (hex method)?

Thanks for reading this, and hope you enjoy your FT50 as much as i do! I've bought 12 portable radios in the last 10 years, and the only one that come close enought to my FT50 as for specs and performances is the Alinco DJ-580 (but then again, not as small and light).

Same thing in the movie "Michael" starring John Travolta.
The op was actual calling "CQ" !
My wife had a good laugh :)

Absolutely right, Mark. And can you imagine what it would be like if many of the hams now on ssb moved to the cw bands. The cw bands would become a mess just like the phone bands. I say do everything possible to discourage hams from learning cw. Lets have one aspect of ham radio that can be enjoyed in peace and quiet by us elitist cw ops. bill, w2by

I believe there is a book on the subject, by (if I remember
right) Ed Noll, who used to write a good column in one of the
radio magazines. You'll also find LOTS of articles on that
general subject in back issues of QST, if you've got a library
near you that has it.

There are probably a lot better sources on the way, but this
may be a start. There must have been a dozen or two articles
in QST over the last handful of years on "stealth antennas" or
small (easily hidden) antennas.

A friend of mine, KD4UDA, has had a lot of luck with a small
dipole hung in his attic. Give you any ideas? ;-) 73!

The "CW bands" consist of all the HF amateur frequencies (CW is permitted
anywhere on any band). Thus, no mess would result if suddenly everyone
began using code (we'd just start using the above privilege, and Drew
wouldn't be bothered by what he hears on 14313 kc anymore).

Excuse me?! Do you have any idea how . . . how . . . dense that makes you
sound?!

OK, I accept what you said was an exageration, but it doesn't come anywhere
close to my experience with RS. I have a stereo system I bought from them
20 years ago that is just as nice and reliable today as the day I brought
it home. Parts, antennas, clocks, calculators, phones, Ham gear, scanners,
I've bought them all and not had any fail from any manufacturing defect. A
scanner I got from them got zapped by static electricity, but after
returning it for non-warrantee service and paying a reasonable $20 service
charge, it has worked fine ever since.

No, I am sure people have had problems with RS equipment, but nothing like
you imply with your original statement.

- --- BEGIN Linux AX25 HOWTO part 3/3 ---
```

• The router machine is a lowly 386DX20 with a 20Mb harddrive and a very minimal linux configuration.

```
22.2. IPIP encapsulated gateway configuration.

Linux is now very commonly used for TCP/IP encapsulated gateways
around the world. The new tunnel driver supports multiple encapsulated
routes and makes the older ipip daemon obsolete.

A typical configuration would look similar to the following.

. . . . . .
--- .
| Network /---------\ . Network
| 154.27.3/24 | | . 44.136.16/24 \ | /
| | Linux | . \|/
| | | . |
| eth0 | IPIP | . /-----\ /----------\ |
---|---------------| |-----| TNC |----| Radio |---/
| 154.27.3.20 | Gateway | . \-----/ \----------/
| | | sl0
| | | 44.136.16.1
| | | .
| | | .
| \_________/ .
--- . . . . . .

The configuration files of interest are:

# /etc/rc.net
# This file is a simple configuration that provides one KISS AX.25
# radio port, one Ethernet device, and utilises the kernel tunnel driver
# to perform the IPIP encapsulation/decapsulation
#
```

```
echo "/etc/rc.net"
echo " Configuring:"
#
echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."
#
echo -n " ethernet:"
/sbin/ifconfig eth0 154.27.3.20 netmask 255.255.255.0 \
broadcast 154.27.3.255 up
/sbin/route add 154.27.3.20 eth0
/sbin/route add -net 154.27.3.0 netmask 255.255.255.0 eth0
echo " done."
#
echo -n " AX.25: "
kissattach -i 44.136.16.1 -m 512 /dev/ttyS1 4800
/sbin/ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.16.255
/sbin/route add -host 44.136.16.1 sl0
/sbin/route add -net 44.136.16.0 netmask 255.255.255.0 window 1024 sl0
#
echo -n " tunnel:"
/sbin/ifconfig tunl0 44.136.16.1 mtu 512 up
#
echo done.
#
echo -n "Routing ... "
source /etc/ipip.routes
echo done.
#
# end.
```

and:

```
# /etc/ipip.routes
# This file is generated using the munge script
#
/sbin/route add -net 44.134.8.0 netmask 255.255.255.0 tunl0 gw 134.43.26.1
/sbin/route add -net 44.34.9.0 netmask 255.255.255.0 tunl0 gw 174.84.6.17
/sbin/route add -net 44.13.28.0 netmask 255.255.255.0 tunl0 gw 212.37.126.3
...
...
...
```

/etc/ax25/axports

```
# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz
```

Some points to note here are:

• The new tunnel driver uses the gw field in the routing table in place of the pointopoint parameter to specify the address of the remote IPIP gateway. This is why it now supports multiple routes per interface.

• You can configure two network devices with the same address. In this example both the sl0 and the tunl0 devices have been configured with the IP address of the radio port. This is done so that the remote gateway sees the correct address from your gateway in encapsulated datagrams sent to it.

• The route commands used to specify the encapsulated routes can be automatically generated by a modified version of the munge script. This is included below. The route commands would then be written to a separate file and read in using the bash source /etc/ipip.routes command (assuming you called the file with the routing commands /etc/ipip.routes) as illustrated. The source file must be in the NOS route command format.

• Note the use of the window argument on the route command. Setting this parameter to an appropriate value improves the performance of your radio link.

The new tunnel-munge script:

```
#!/bin/sh
#
# From: Ron Atkinson <n8fow@hamgate.cc.wayne.edu>
#
# This script is basically the 'munge' script written by Bdale N3EUA
# for the IPIP daemon and is modified by Ron Atkinson N8FOW. It's
# purpose is to convert a KA9Q NOS format gateways route file
# (usually called 'encap.txt') into a Linux routing table format
# for the IP tunnel driver.
#
# Usage: Gateway file on stdin, Linux route format file on stdout.
# eg. tunnel-munge < encap.txt > ampr-routes
#
# NOTE: Before you use this script be sure to check or change the
# following items:
#
# 1) Change the 'Local routes' and 'Misc user routes' sections
# to routes that apply to your own area (remove mine please!)
# 2) On the fgrep line be sure to change the IP address to YOUR
# gateway Internet address. Failure to do so will cause serious
# routing loops.
# 3) The default interface name is 'tunl0'. Make sure this is
# correct for your system.

echo "#"
echo "# IP tunnel route table built by $LOGNAME on `date`"
echo "# by tunnel-munge script v960307."
echo "#"
```

```

23. AX.25, NetRom, Rose network programming.

Probably the biggest advantage of using the kernel based implementations of the amateur packet radio protocols is the ease with which you can develop applications and programs to use them.

While the subject of Unix Network Programming is outside the scope of this document I will describe the elementary details of how you can make use of the AX.25, NetRom and Rose protocols within your software.

23.1. The address families.

Network programming for AX.25, NetRom and Rose is quite similar to programming for TCP/IP under Linux. The major differences being the address families used, and the address structures that need to be mangled into place.

The address family names for AX.25, NetRom and Rose are AF_AX25, AF_NETROM and AF_ROSE respectively.

23.2. The header files.

You must always include the `ax25.h' header file, and also the `netrom.h' or `rose.h' header files if you are dealing with those protocols. Simple top level skeletons would look something like the following:

For AX.25:

```
#include <ax25.h>
int s, addrlen = sizeof(struct full_sockaddr_ax25);
struct full_sockaddr_ax25 sockaddr;
sockaddr.fsa_ax25.sax25_family = AF_AX25
```

For NetRom:

```
#include <ax25.h>
#include <netrom.h>
int s, addrlen = sizeof(struct full_sockaddr_ax25);
struct full_sockaddr_ax25 sockaddr;
sockaddr.fsa_ax25.sax25_family = AF_NETROM;
```

For Rose:

```
#include <ax25.h>
#include <rose.h>
int s, addrlen = sizeof(struct sockaddr_rose);
struct sockaddr_rose sockaddr;
sockaddr.srose_family = AF_ROSE;
```

23.3. Callsign mangling and examples.

There are routines within the lib/ax25.a library built in the AX25 utilities package that manage the callsign conversions for you. You can write your own of course if you wish.

The user_call utilities are excellent examples from which to work. The source code for them is included in the AX25 utilities package. If you spend a little time working with those you will soon see that 90 percent of the work is involved in just getting ready to open the socket. Actually making the connection is easy, the preparation takes time.

The example are simple enough to not be very confusing. If you have any questions, you should feel to direct them to the linux-hams mailing list and someone there will be sure to help you.

24. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio TCP/IP discussions), and you might also try the #linpeople channel on the linuxnet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

The linux-hams mailing list is archived at:

zone.pspt.fi <http://zone.pspt.fi/archive/linux-hams/> and zone.oh7rba.ampr.org <http://zone.oh7rba.ampr.org/archive/linux-hams/>. Please use the archives when you are first starting, because many common questions are answered there.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which TCP/IP is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

- --- BEGIN Linux AX25 HOWTO part 2/3 ---

To assist in the diagnosis of problems you can use the sccstat program
to display the current configuration of an SCC device. To use it try:

# sccstat /dev/scc0

you will displayed a very large amount of information relating to the
configuration and health of the /dev/scc0 SCC port.
The sccparam command allows you to change or modify a configuration
after you have booted. Its syntax is very similar to the NOS param
command, so to set the txtail setting of a device to 100mS you would
use:

# sccparam /dev/scc0 txtail 0x8

7.1.8. Creating a BPQ ethernet device.

Kernel Compile Options:

General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] BPQ Ethernet driver for AX.25

Linux supports BPQ Ethernet compatibility. This enables you to run the
AX.25 protocol over your Ethernet LAN and to interwork your linux
machine with other BPQ machines on the LAN.

The BPQ network devices are named `bpq[0-9]'. The `bpq0' device is
associated with the `eth0' device, the `bpq1' device with the `eth1'
device etc.
```

Configuration is quite straightforward. You firstly must have
configured a standard Ethernet device. This means you will have
compiled your kernel to support your Ethernet card and tested that
this works. Refer to the Ethernet-HOWTO <Ethernet-HOWTO.html> for more
information on how to do this.

To configure the BPQ support you need to configure the Ethernet device
with an AX.25 callsign. The following command will do this for you:

/sbin/ifconfig bpq0 hw ax25 vk2ktj-14 up

Again, remember that the callsign you specify should match the entry
in the /etc/ax25/axports file that you wish to use for this port.

7.1.9. Configuring the BPQ Node to talk to the Linux AX.25 support.

BPQ Ethernet normally uses a multicast address. The Linux
implementation does not, and instead it uses the normal Ethernet
broadcast address. The NET.CFG file for the BPQ ODI driver should
therefore be modifified to look similar to this:

LINK SUPPORT

MAX STACKS 1
MAX BOARDS 1

LINK DRIVER E2000 ; or other MLID to suit your card

INT 10 ;
PORT 300 ; to suit your card

FRAME ETHERNET_II

PROTOCOL BPQ 8FF ETHERNET_II ; required for BPQ - can change PID

BPQPARAMS ; optional - only needed if you want
; to override the default target addr

ETH_ADDR FF:FF:FF:FF:FF:FF ; Target address

7.2. Creating the /etc/ax25/axports file.

The /etc/ax25/axports is a simple text file that you create with a
text editor. The format of the /etc/ax25/axports file is as follows:

portname callsign baudrate paclen window description

where:

portname
is a text name that you will refer to the port by.

callsign
is the AX.25 callsign you want to assign to the port.

baudrate
is the speed at which you wish the port to communicate with your

TNC.

paclen
is the maximum packet length you want to configure the port to
use for AX.25 connected mode connections.

window
is the AX.25 window (K) parameter. This is the same as the
MAXFRAME setting of many tnc's.

description
is a textual description of the port.

In my case, mine looks like:

radio VK2KTJ-15 4800 256 2 4800bps 144.800 MHz
ether VK2KTJ-14 10000000 256 2 BPQ/ethernet device

Remember, you must assign unique callsign/ssid to each AX.25 port you create. Create one entry for each AX.25 device you want to use, this includes KISS, Baycom, SCC, PI, PT and SoundModem ports. Each entry here will describe exactly one AX.25 network device. The entries in this file are associated with the network devices by the callsign/ssid. This is at least one good reason for requiring unique callsign/ssid.

7.3. Configuring AX.25 routing.

You may wish to configure default digipeaters paths for specific hosts. This is useful for both normal AX.25 connections and also IP based connections. The axparms command enables you to do this. Again, the man page offers a complete description, but a simple example might be:

/usr/sbin/axparms -route add radio VK2XLZ VK2SUT

This command would set a digipeater entry for VK2XLZ via VK2SUT on the AX.25 port named radio.

8. Configuring an AX.25 interface for TCP/IP.

It is very simple to configure an AX.25 port to carry TCP/IP. If you have KISS interfaces then there are two methods for configuring an IP address. The kissattach command has an option that allows you to do specify an IP address. The more conventional method using the ifconfig command will work on all interface types.

So, modifying the previous KISS example:

/usr/sbin/kissattach -i 44.136.8.5 -m 512 /dev/ttyS0 radio
/sbin/route add -net 44.136.8.0 netmask 255.255.255.0 ax0
/sbin/route add default ax0

to create the AX.25 interface with an IP address of 44.136.8.5 and an MTU of 512 bytes. You should still use the ifconfig to configure the

other parameters if necessary.

If you have any other interface type then you use the ifconfig program to configure the ip address and netmask details for the port and add a route via the port, just as you would for any other TCP/IP interface. The following example is for a PI card device, but would work equally well for any other AX.25 network device:

```
# /sbin/ifconfig pi0a 44.136.8.5 netmask 255.255.255.0 up
# /sbin/ifconfig pi0a broadcast 44.136.8.255 mtu 512
# /sbin/route add -net 44.136.8.0 netmask 255.255.255.0 pi0a
# /sbin/route add default pi0a
```

The commands listed above are typical of the sort of configuration many of you would be familiar with if you have used NOS or any of its derivatives or any other TCP/IP software. Note that the default route might not be required in your configuration if you have some other network device configured.

To test it out, try a ping or a telnet to a local host.

```
# ping -i 5 44.136.8.58
```

Note the use of the `-i 5' arguments to ping to tell it to send pings every 5 seconds instead of its default of 1 second.

9. Configuring a NetRom port.

The NetRom protocol relies on, and uses the AX.25 ports you have created. The NetRom protocol rides on top of the AX.25 protocol. To configure NetRom on an AX.25 interface you must configure two files. One file describes the Netrom interfaces, and the other file describes which of the AX.25 ports will carry NetRom. You can configure multiple NetRom ports, each with its own callsign and alias, the same procedure applies for each.

9.1. Configuring /etc/ax25/nrports

The first is the /etc/ax25/nrports file. This file describes the NetRom ports in much the same way as the /etc/ax25/axports file describes the AX.25 ports. Each NetRom device you wish to create must have an entry in the /etc/ax25/nrports file. Normally a Linux machine would have only one NetRom device configured that would use a number of the AX.25 ports defined. In some situations you might wish a special service such as a BBS to have a seperate NetRom alias and so you would create more than one.

This file is formatted as follows:

```
name callsign alias paclen description
```

Where:

name
is the text name that you wish to refer to the port by.

callsign
is the callsign that the NetRom traffic from this port will use. Note, this is not that address that users should connect to to get access to a node style interface. (The node program is covered later). This callsign/ssid should be unique and should not appear elsewhere in either of the /etc/ax25/axports or the /etc/ax25/nrports files.

alias
is the NetRom alias this port will have assigned to it.

paclen
is the maximum size of NetRom frames transmitted by this port.

description
is a free text description of the port.

An example would look something like the following:

netrom VK2KTJ-9 LINUX 236 Linux Switch Port

This example creates a NetRom port known to the rest of the NetRom network as `LINUX:VK2KTJ-9'.

This file is used by programs such as the call program.

9.2. Configuring /etc/ax25/nrbroadcast

The second file is the /etc/ax25/nrbroadcast file. This file may contain a number of entries. There would normally be one entry for each AX.25 port that you wish to allow NetRom traffic on.

This file is formatted as follows:

axport min_obs def_qual worst_qual verbose

Where:

axport
is the port name obtained from the /etc/ax25/axports file. If you do not have an entry in /etc/ax25/nrbroadcasts for a port then this means that no NetRom routing will occur and any received NetRom broadcasts will be ignored for that port.

min_obs
is the minimum obselesence value for the port.

def_qual
is the default quality for the port.

worst_qual
is the worst quality value for the port, any routes under this quality will be ignored.

verbose
is a flag determining whether full NetRom routing broadcasts will occur from this port or only a routing broadcast

advertising the node itself.

An example would look something like the following:

radio 1 200 100 1

9.3. Creating the NetRom Network device

When you have the two configuration files completed you must create the NetRom device in much the same way as you did for the AX.25 devices. This time you use the nrattach command. The nrattach works in just the same way as the axattach command except that it creates NetRom network devices called `nr[0-9]'. Again, the first time you use the nrattach command it creates the `nr0' device, the second time it creates the `nr1' network devices etc. To create the network device for the NetRom port we've defined we would use:

nrattach netrom

This command would start the NetRom device (nr0) named netrom configured with the details specified in the /etc/ax25/nrports file.

9.4. Starting the NetRom daemon

The Linux kernel does all of the NetRom protocol and switching, but does not manage some functions. The NetRom daemon manages the NetRom routing tables and generates the NetRom routing broadcasts. You start NetRom daemon with the command:

/usr/sbin/netromd -i

You should soon see the /proc/net/nr_neigh file filling up with information about your NetRom neighbours.

Remember to put the /usr/sbin/netromd command in your rc files so that it is started automatically each time you reboot.

9.5. Configuring NetRom routing.

You may wish to configure static NetRom routes for specific hosts. The nrparms command enables you to do this. Again, the man page offers a complete description, but a simple example might be:

/usr/sbin/nrparms -nodes VK2XLZ-10 + #MINTO 120 5 radio VK2SUT-9

This command would set a NetRom route to #MINTO:VK2XLZ-10 via a neighbour VK2SUT-9 on my AX.25 port called `radio'.

You can manually create entries for new neighbours using the nrparms command as well. For example:

/usr/sbin/nrparms -routes radio VK2SUT-9 + 120

This command would create VK2SUT-9 as a NetRom neighbour with a quality of 120 and this will be locked and will not be deleted automatically.

10. Configuring a NetRom interface for TCP/IP.

Configuring a NetRom interface for TCP/IP is almost identical to configuring an AX.25 interface for TCP/IP.

Again you can either specify the ip address and mtu on the nrattach command line, or use the ifconfig and route commands, but you need to manually add arp entries for hosts you wish to route to because there is no mechanism available for your machine to learn what NetRom address it should use to reach a particular IP host.

So, to create an nr0 device with an IP address of 44.136.8.5, an mtu of 512 and configured with the details from the /etc/ax25/nrports file for a NetRom port named netrom you would use:

```
# /usr/sbin/nrattach -i 44.136.8.5 -m 512 netrom
# route add 44.136.8.5 nr0
```

or you could use something like the following commands manually:

```
# /usr/sbin/nrattach netrom
# ifconfig nr0 44.136.8.5 netmask 255.255.255.0 hw netrom VK2KTJ-9
# route add 44.136.8.5 nr0
```

Then for each IP host you wish to reach via NetRom you need to set route and arp entries. To reach a destination host with an IP address of 44.136.80.4 at NetRom address BBS:VK3BBS via a NetRom neighbour with callsign VK2SUT-0 you would use commands as follows:

```
# route add 44.136.80.4 nr0
# arp -t netrom -s 44.136.80.4 vk2sut-0
# nrparms -nodes vk3bbs + BBS 120 6 sl0 vk2sut-0
```

The `120' and `6' arguments to the nrparms command are the NetRom quality and obsolescence count values for the route.

11. Configuring a Rose port.

The Rose packet layer protocol is similar to layer three of the X.25 specification. The kernel based Rose support is a modified version of the FPAC Rose implementation <http://fpac.lmi.ecp.fr/f1oat/f1oat.html>.

The Rose packet layer protocol protocol relies on, and uses the AX.25 ports you have created. The Rose protocol rides on top of the AX.25 protocol. To configure Rose you must create a configuration file that describes the Rose ports you want. You can create multiple Rose ports if you wish, the same procedure applies for each.

11.1. Configuring /etc/ax25/rsports

The file where you configure your Rose interfaces is the /etc/ax25/rsports file. This file describes the Rose port in much the same way as the /etc/ax25/axports file describes the AX.25 ports.

This file is formatted as follows:

name addresss description

Where:

name
is the text name that you wish to refer to the port by.

address
is the 10 digit Rose address you wish to assign to this port.

description
is a free text description of the port.

An example would look something like the following:

rose 5050294760 Rose Port

Note that Rose will use the default callsign/ssid configured on each
AX.25 port unless you specify otherwise.

To configure a seperate callsign/ssid for Rose to use on each port you
use the rsparms command as follows:

/usr/sbin/rsprams -call VK2KTJ-10

This example would make Linux listen for and use the callsign/ssid
VK2KTJ-10 on all of the configured AX.25 ports for Rose calls.

11.2. Creating the Rose Network device.

When you have created the /etc/ax25/rsports file you may create the
Rose device in much the same way as you did for the AX.25 devices.
This time you use the rsattach command. The rsattach command creates
network devices named `rose[0-5]'. The first time you use the rsattach
command it create the `rose0' device, the second time it creates the
`rose1' device etc. For example:

rsattach rose

This command would start the Rose device (rose0) configured with the
details specified in the /etc/ax25/rsports file for the entry named
`rose'.

11.3. Configuring Rose Routing

The Rose protocol currently supports only static routing. The rsparms
utility allows you to configure your Rose routing table under Linux.

For example:

rsparms -nodes add 5050295502 radio vk2xlz

would add a route to Rose node 5050295502 via an AX.25 port named
`radio' in your /etc/ax25/axports file to a neighbour with the call&#65533;
sign VK2XLZ.

You may specify a route with a mask to capture a number of Rose destinations into a single routing entry. The syntax looks like:

```
# rsparms -nodes add 5050295502/4 radio vk2xlz
```

which would be identical to the previous example except that it would match any destination address that matched the first four digits sup&#65533;plied, in this case any address commencing with the digits 5050. An alternate form for this command is:

```
# rsparms -nodes add 5050/4 radio vk2xlz
```

which is probably the less ambiguous form.

12. Making AX.25/NetRom/Rose calls.

Now that you have all of your AX.25, NetRom and Rose interfaces configured and active, you should be able to make test calls.

The AX25 Utilities package includes a program called `call' which is a splitscreen terminal program for AX.25, NetRom and Rose.

A simple AX.25 call would look like:

```
/usr/bin/call radio VK2DAY via VK2SUT
```

A simple NetRom call to a node with an alias of SUNBBS would look like:

```
/usr/bin/call netrom SUNBBS
```

A simple Rose call to HEARD at node 5050882960 would look like:

```
/usr/bin/call rose HEARD 5050882960
```

Note: you must tell call which port you wish to make the call on, as the same destination node might be reachable on any of the ports you have configured.

The call program is a linemode terminal program for making AX.25 calls. It recognises lines that start with `~' as command lines. The `~.' command will close the connection.

Please refer to the man page in /usr/man for more information.

13. Configuring Linux to accept Packet connections.

Linux is a powerful operating system and offers a great deal of flexibility in how it is configured. With this flexibility comes a cost in configuring it to do what you want. When configuring your Linux machine to accept incoming AX.25, NetRom or Rose connections there are a number of questions you need to ask yourself. The most important of which is: "What do I want users to see when they connect?". People are developing neat little applications that may be used to provide services to callers, a simple example is the pms program included in the AX25 utilities, a more complex example is the node program also included in the AX25 utilities. Alternatively you

might want to give users a login prompt so that they can make use of a shell account, or you might even have written your own program, such as a customised database or a game, that you want people to connect to. Whatever you choose, you must tell the AX.25 software about this so that it knows what software to run when it accepts an incoming AX.25 connection.

The ax25d program is similar to the inetd program commonly used to accept incoming TCP/IP connections on unix machines. It sits and listens for incoming connections, when it detects one it goes away and checks a configuration file to determine what program to run and connect to that connection. Since this the standard tool for accepting incoming AX.25, NetRom and Rose connections I'll describe how to configure it.

13.1. Creating the /etc/ax25/ax25d.conf file.

This file is the configuration file for the ax25d AX.25 daemon which handles incoming AX.25, NetRom and Rose connections.

The file is a little cryptic looking at first, but you'll soon discover it is very simple in practice, with a small trap for you to be wary of.

The general format of the ax25d.conf file is as follows:

```
# This is a comment and is ignored by the ax25d program.
[port_name] || <port_name> || {port_name}
<peer1> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer2> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
parameters window T1 T2 T3 idle N2 <mode>
<peer3> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
default window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
```

Where:

at the start of a line marks a comment and is completely ignored by the ax25d program.

<port_name>
is the name of the AX.25, NetRom or Rose port as specified in the /etc/ax25/axports, /etc/ax25/nrports and /etc/ax25/rsports files. The name of the port is surrounded by the `[]' brackets if it is an AX.25 port, the `<>' brackets if it is a NetRom port, or the `{}' brackets if it is a Rose port. There is an alternate form for this field, and that is use prefix the port name with `callsign/ssid via' to indicate that you wish accept calls to the callsign/ssid via this interface. The example should more clearly illustrate this.

<peer>
is the callsign of the peer node that this particular configuration applies to. If you don't specify an SSID here then

any SSID will match.

window
is the AX.25 Window parameter (K) or MAXFRAME parameter for this configuration.

T1 is the Frame retransmission (T1) timer in half second units.

T2 is the amount of time the AX.25 software will wait for another incoming frame before preparing a response in 1 second units.

T3 is the amount of time of inactivity before the AX.25 software will disconnect the session in 1 second units.

idle
is the idle timer value in seconds.

N2 is the number of consecutive retransmissions that will occur before the connection is closed.

<mode>
provides a mechanism for determining certain types of general permissions. The modes are enabled or disabled by supplying a combination of characters, each representing a permission. The characters may be in either upper or lower case and must be in a single block with no spaces.

u/U
UTMP - currently unsupported.

v/V
Validate call - currently unsupported.

q/Q
Quiet - Don't log connection

n/N
check NetRom Neighbour - currently unsupported.

d/D
Disallow Digipeaters - Connections must be direct, not digipeated.

l/L
Lockout - Don't allow connection.

*/0
marker - place marker, no mode set.

<uid>
is the userid that the program to be run to support the connection should be run as.

<cmd>
is the full pathname of the command to be run, with no arguments

specified.

<cmd-name>
is the text that should appear in a ps as the command name
running (normally the same as <cmd> except without the directory
path information.

<arguments>
are the command line argument to be passed to the <:cmd> when it
is run. You pass useful information into these arguments by use
of the following tokens:

%d Name of the port the connection was received on.

%U AX.25 callsign of the connected party without the SSID, in
uppercase.

%u AX.25 callsign of the connected party without the SSID, in
lowercase.

%S AX.25 callsign of the connected party with the SSID, in
uppercase.

%s AX.25 callsign of the connected party with the SSID, in
lowercase.

%P AX.25 callsign of the remote node that the connection came in
from without the SSID, in uppercase.

%p AX.25 callsign of the remote node that the connection came in
from without the SSID, in lowercase.

%R AX.25 callsign of the remote node that the connection came in
from with the SSID, in uppercase.
%r AX.25 callsign of the remote node that the connection came in
from with the SSID, in lowercase.

You need one section in the above format for each AX.25, NetRom or
Rose interface you want to accept incoming AX.25, NetRom or Rose
connections on.

There are two special lines in the paragraph, one starts with the
string `parameters' and the other starts with the string `default'
(yes there is a difference). These lines serve special functions.

The `default' lines purpose should be obvious, this line acts as a
catch-all, so that any incoming connection on the <interface_call>
interface that doesn't have a specific rule will match the `default'
rule. If you don't have a `default' rule, then any connections not
matching any specific rule will be disconnected immediately without
notice.

The `parameters' line is a little more subtle, and here is the trap I
mentioned earlier. In any of the fields for any definition for a peer
you can use the `*' character to say `use the default value'. The

`parameters' line is what sets those default values. The kernel
software itself has some defaults which will be used if you don't
specify any using the `parameters' entry. The trap is that the these
defaults apply only to those rules below the `parameters' line not to
those above. You may have more than one `parameters' rule per
interface definition, and in this way you may create groups of default
configurations.

13.2. A simple example ax25d.conf file.

Ok, an illustrative example:

```
# ax25d.conf for VK2KTJ - 02/03/97
# This configuration uses the AX.25 port defined earlier.

# <peer> Win T1 T2 T3 idl N2 <mode> <uid> <exec> <argv[0]>[<args....>]

[VK2KTJ-0 via radio]
parameters 1 10 * * * * * root /usr/sbin/axspawn axspawn %u +
VK2XLZ * * * * * * *
VK2DAY * * * * * * *
NOCALL * * * * * * L
default 1 10 5 100 180 5 * root /usr/sbin/pms pms -a -o vk2ktj

[VK2KTJ-1 via radio]
default * * * * * 0 root /usr/sbin/node node

<netrom>
parameters 1 10 * * * * *
NOCALL * * * * * * L
default * * * * * * 0 root /usr/sbin/node node

{VK2KTJ-0 via rose}
parameters 1 10 * * * * * root /usr/sbin/axspawn axspawn %u +
VK2XLZ * * * * * * *
VK2DAY * * * * * * *
NOCALL * * * * * * L
default 1 10 5 100 180 5 * root /usr/sbin/pms pms -a -o vk2ktj

{VK2KTJ-1 via rose}
default * * * * * 0 root /usr/sbin/node node radio
```

This example says that anybody attempting to connect to the callsign
`VK2KTJ-0' heard on the AX.25 port called `radio' will have the
following rules applied:

Anyone whose callsign is set to `NOCALL' should be locked out, note
the use of mode `L'.

The parameters line changes two parameters from the kernel defaults
(Window and T1) and will run the /usr/sbin/axspawn program for them.
Any copies of /usr/sbin/axspawn run this way will appear as axspawn in
a ps listing for convenience. The next two lines provide definitions
for two stations who will receive those permissions.

The last line in the paragraph is the `catch all' definition that everybody else will get (including VK2XLZ and VK2DAY using any other SSID other than -1). This definition sets all of the parameters implicitly and will cause the pms program to be run with a command line argument indicating that it is being run for an AX.25 connection, and that the owner callsign is VK2KTJ. (See the `Configuring the PMS' section below for more details).

The next configuration accepts calls to VK2KTJ-1 via the radio port. It runs the node program for everybody that connects to it.

The next configuration is a NetRom configuration, note the use of the greater-then and less-than braces instead of the square brackets. These denote a NetRom configuration. This configuration is simpler, it simply says that anyone connecting to our NetRom port called `netrom' will have the node program run for them, unless they have a callsign of `NOCALL' in which case they will be locked out.

The last two configurations are for incoming Rose connections. The first for people who have placed calls to `vk2ktj-0' and the second for `VK2KTJ-1 at the our Rose node address. These work precisely the same way. Not the use of the curly braces to distinguish the port as a Rose port.

This example is a contrived one but I think it illustrates clearly the important features of the syntax of the configuration file. The configuration file is explained fully in the ax25d.conf man page. A more detailed example is included in the ax25-utils package that might be useful to you too.

13.3. Starting ax25d

When you have the two configuration files completed you start ax25d with the command:

/usr/sbin/ax25d

When this is run people should be able to make AX.25 connections to your Linux machine. Remember to put the ax25d command in your rc files so that it is started automatically when you reboot each time.

14. Configuring the node software.

The node software was developed by Tomi Manninen <tomi.manninen@hut.fi> and was based on the original PMS program. It provides a fairly complete and flexible node capability that is easily configured. It allows users once they are connected to make Telnet, NetRom, Rose, and AX.25 connections out and to obtain various sorts of information such as Finger, Nodes and Heard lists etc. You can configure the node to execute any Linux command you wish fairly simply.

The node would normally be invoked from the ax25d program although it is also capable of being invoked from the TCP/IP inetd program to allow users to telnet to your machine and obtain access to it, or by

running it from the command line.

14.1. Creating the /etc/ax25/node.conf file.

The node.conf file is where the main configuration of the node takes
place. It is a simple text file and its format is as follows:

```
# /etc/ax25/node.conf
# configuration file for the node(8) program.
#
# Lines beginning with '#' are comments and are ignored.

# Hostname
# Specifies the hostname of the node machine
hostname radio.gw.vk2ktj.ampr.org

# Local Network
# allows you to specify what is consider 'local' for the
# purposes of permission checking using nodes.perms.
localnet 44.136.8.96/29

# Hide Ports
# If specified allows you to make ports invisible to users. The
# listed ports will not be listed by the (P)orts command.
hiddenports rose netrom

# Node Identification.
# this will appear in the node prompt
NodeId LINUX:VK2KTJ-9

# NetRom port
# This is the name of the netrom port that will be used for
# outgoing NetRom connections from the node.
NrPort netrom

# Node Idle Timeout
# Specifies the idle time for connections to this node in seconds.
idletimout 1800

# Connection Idle Timeout
# Specifies the idle timer for connections made via this node in
# seconds.
conntimeout 1800

# Reconnect
# Specifies whether users should be reconnected to the node
# when their remote connections disconnect, or whether they
# should be disconnected complete.
reconnect on

# Command Aliases
# Provide a way of making complex node commands simple.
alias CONV "telnet vk1xwt.ampr.org 3600"
alias BBS "connect radio vk2xsb"
```

```
# Externam Command Aliases
# Provide a means of executing external commands under the node.
# extcmd <cmdname> <flag> <userid> <command>
# Flag == 1 is the only implemented function.
# <command> is formatted as per ax25d.conf
extcmd PMS 1 root /usr/sbin/pms pms -u %U -o VK2KTJ

# Logging
# Set logging to the system log. 3 is the noisiest, 0 is disabled.
loglevel 3

# The escape character
# 20 = (Control-T)
EscapeChar 20
```

14.2. Creating the /etc/ax25/node.perms file.

The node allows you to assign permissions to users. These permissions allow you to determine which users should be allowed to make use of options such as the (T)elnet, and (C)onnect commands, for example, and which shouldn't. The node.perms file is where this information is stored and contains five key fields. For all fields an asterisk `*' character matches anything. This is useful for building default rules.

user
The first field is the callsign or user to which the permissions should apply. Any SSID value is ignored, so you should just place the base callsign here.

method
Each protocol or access method is also given permissions. For example you might allow users who have connected via AX.25 or NetRom to use the (C)onnect option, but prevent others, such as those who are telnet connected from a non-local node from having access to it. The second field therefore allows you to select which access method this permissions rule should apply to. The access methods allowed are:

```
method description
------ -----------------------------------------------------------
ampr User is telnet connected from an amprnet address (44.0.0.0)
ax25 User connected by AX.25
host User started node from command line
inet user is telnet connected from a non-loca, non-ampr address.
local User is telnet connected from a 'local' host
netrom User connected by NetRom
rose User connected by Rose
* User connected by any means.
```

port
For AX.25 users you can control permissions on a port by port basis too if you choose. This allows you to determine what AX.25 are allowed to do based on which of your ports they have connected to. The third field contains the port name if you are

using this facility. This is useful only for AX.25 connections.

password
You may optionally configure the node so that it prompts users
to enter a password when they connect. This might be useful to
help protect specially configured users who have high authority
levels. If the fourth field is set then its value will be the
password that will be accepted.

permissions
The permissions field is the final field in each entry in the
file. The permissions field is coded as a bit field, with each
facility having a bit value which if set allows the option to be
used and if not set prevents the facility being used. The list
of controllable facilities and their corresponding bit values
are:

value description
----- --
1 Login allowed.
2 AX25 (C)onnects allowed.
4 NetRom (C)onnects allowed.
8 (T)elnet to local hosts allowed.
16 (T)elnet to amprnet (44.0.0.0) hosts allowed.
32 (T)elnet to non-local, non-amprnet hosts allowed.
64 Hidden ports allowed for AX.25 (C)onnects.
128 Rose (C)onnects allowed.

To code the permissions value for a rule, simply take each of the
permissions you want that user to have and add their values
together. The resulting number is what you place in field five.

A sample nodes.perms might look like:

```
# /etc/ax25/node.perms
#
# The node operator is VK2KTJ, has a password of 'secret' and
# is allowed all permissions by all connection methods
vk2ktj * * secret 255

# The following users are banned from connecting
NOCALL * * * 0
PK232 * * * 0
PMS * * * 0

# INET users are banned from connecting.
* inet * * 0

# AX.25, NetRom, Local, Host and AMPR users may (C)onnect and (T)elnet
# to local and ampr hosts but not to other IP addresses.
* ax25 * * 159
* netrom * * 159
* local * * 159
```

```
* host * * 159
* ampr * * 159
```

14.3. Configuring node to run from ax25d

The node program would normally be run by the ax25d program. To do this you need to add appropriate rules to the /etc/ax25/ax25d.conf file. In my configuration I wanted users to have a choice of either connecting to the node or connecting to other services. ax25d allows you to do this by cleverly creating creating port aliases. For example, given the ax25d configuration presented above, I want to configure node so that all users who connect to VK2KTJ-1 are given the node. To do this I add the following to my /etc/ax25/ax25d.conf file:

```
[vk2ktj-1 via radio]
default * * * * * 0 root /usr/sbin/node node
```

This says that the Linux kernel code will answer any connection requests for the callsign `VK2KTJ-1' heard on the AX.25 port named `radio', and will cause the node program to be run.

14.4. Configuring node to run from inetd

If you want users to be able to telnet a port on your machine and obtain access to the node you can go this fairly easily. The first thing to decide is what port users should connect to. In this example I've arbitrarily chosen port 4000, though Tomi gives details on how you could replace the normal telnet daemon with the node in his documentation.

You need to modify two files.

To /etc/services you should add:

```
node 3694/tcp #OH2BNS's node software
```

and to /etc/inetd.conf you should add:

```
node stream tcp nowait root /usr/sbin/node node
```

When this is done, and you have restarted the inetd program any user who telnet connects to port 3694 of your machine will be prompted to login and if configured, their password and then they will be con&#65533;nected to the node.

15. Configuring axspawn.

The axspawn program is a simple program that allows AX.25 stations who connect to be logged in to your machine. It may be invoked from the ax25d program as described above in a manner similar to the node program. To allow a user to log in to your machine you should add a line similar to the following into your /etc/ax25/ax25d.conf file:

```
default * * * * * 1 root /usr/sbin/axspawn axspawn %u
```

If the line ends in the + character then the connecting user must hit
return before they will be allowed to login. The default is to not
wait. Any individual host configurations that follow this line will
have the axspawn program run when they connect. When axspawn is run it
first checks that the command line argument it is supplied is a legal
callsign, strips the SSID, then it checks that /etc/passwd file to see
if that user has an account configured. If there is an account, and
the password is either "" (null) or + then the user is logged in, if
there is anything in the password field the user is prompted to enter
a password. If there is not an existing account in the /etc/passwd
file then axspawn may be configured to automatically create one.

15.1. Creating the /etc/ax25/axspawn.conf file.

You can alter the behaviour of axspawn in various ways by use of the
/etc/ax25/axspawn.conf file. This file is formatted as follows:

```
# /etc/ax25/axspawn.conf
#
# allow automatic creation of user accounts
create yes
#
# guest user if above is 'no' or everything else fails. Disable with "no"
guest no
#
# group id or name for autoaccount
group ax25
#
# first user id to use
first_uid 2001
#
# maximum user id
max_uid 3000
#
# where to add the home directory for the new users
home /home/ax25
#
# user shell
shell /bin/bash
#
# bind user id to callsign for outgoing connects.
associate yes
```

The eight configurable characteristics of axspawn are as follows:

```
# indicates a comment.
```

```
create
if this field is set to yes then axspawn will attempt to
automatically create a user account for any user who connects
and does not already have an entry in the /etc/passwd file.
```

guest
this field names the login name of the account that will be used
for people who connect who do not already have accounts if
create is set to no. This is usually ax25 or guest.

group
this field names the group name that will be used for any users
who connect and do not already have an entry in the /etc/passwd
file.

first_uid
this is the number of the first userid that will be
automatically created for new users.

max_uid
this is the maximum number that will be used for the userid of
new users.

home
this is the home (login) directory of new users.

shell
this is the login shell of any new users.

associate
this flag indicates whether outgoing AX.25 connections made by
this user after they login will use their own callsign, or your
stations callsign.

16. Configuring the pms

The pms program is an implementation of a simple personal message
system. It was originally written by Alan Cox. Dave Brown, N2RJT,
<dcb@vectorbd.com> has taken on further development of it. At present
it is still very simple, supporting only the ability to send mail to
the owner of the system and to obtain some limited system information
but Dave is working to expand its capability to make it more useful.

After that is done there are a couple of simple files that you should
create that give users some information about the system and then you
need to add appropriate entries into the ax25d.conf file so that
connected users are presented with the PMS.

16.1. Create the /etc/ax25/pms.motd file.

The /etc/ax25/pms.motd file contains the `message of the day' that
users will be presented with after they connect and receive the usual
BBS id header. The file is a simple text file, any text you include in
this file will be sent to users.

16.2. Create the /etc/ax25/pms.info file.

The /etc/ax25/pms.info file is also a simple text file in which you
would put more detailed information about your station or
configuration. This file is presented to users in response to their

issuing of the Info command from the PMS> prompt.

16.3. Associate AX.25 callsigns with system users.

When a connected user sends mail to an AX.25 callsign, the pms expects that callsign to be mapped, or associated with a real system user on your machine. This is described in a section of its own.

16.4. Add the PMS to the /etc/ax25/ax25d.conf file.

Adding the pms to your ax25d.conf file is very simple. There is one small thing you need to think about though. Dave has added command line arguments to the PMS to allow it to handle a number of different text end-of-line conventions. AX.25 and NetRom by convention expect the end-of-line to be carriage return, linefeed while the standard unix end-of-line is just newline. So, for example, if you wanted to add an entry that meant that the default action for a connection received on an AX.25 port is to start the PMS then you would add a line that looked something like:

default 1 10 5 100 5 0 root /usr/sbin/pms pms -a -o vk2ktj

This simply runs the pms program, telling it that it is an AX.25 connection it is connected to and that the PMS owner is vk2ktj. Check the man page for what you should specify for other connection methods.

16.5. Test the PMS.

To test the PMS, you can try the following command from the command line:

/usr/sbin/pms -u vk2ktj -o vk2ktj

Substitute your own callsign for mine and this will run the pms, telling it that it is to use the unix end-of-line convention, and that user logging in is vk2ktj. You can do all the things connected users can.

Additionally you might try getting some other node to connect to you to confirm that your ax25d.conf configuration works.

17. Configuring the user_call programs.

The `user_call' programs are really called: ax25_call and netrom_call. They are very simple programs designed to be called from ax25d to automate network connections to remote hosts. They may of course be called from a number of other places such as shell scripts or other daemons such as the node program.

They are like a very simple call program. They don't do any meddling with the data at all, so the end of line handling you'll have to worry about yourself.

Let's start with an example of how you might use them. Imagine you have a small network at home and that you have one linux machine

acting as your Linux radio gateway and another machine, lets say a BPQ node connected to it via an ethernet connection.

Normally if you wanted radio users to be able to connect to the BPQ node they would either have to digipeat through your linux node, or connect to the node program on your linux node and then connect from it. The ax25_call program can simplify this if it is called from the ax25d program.

Imagine the BPQ node has the callsign VK2KTJ-9 and that the linux machine has the AX.25/ethernet port named `bpq'. Let us also imagine the Linux gateway machine has a radio port called `radio'.

An entry in the /etc/ax25/ax25d.conf that looked like:

```
[VK2KTJ-1 via radio]
default * * * * * * *
root /usr/sbin/ax25_call ax25_call bpq %u vk2ktj-9
```

would enable users to connect direct to `VK2KTJ-1' which would actu&#65533;
ally be the Linux ax25d daemon and then be automatically switched to
an AX.25 connection to `VK2KTJ-9' via the `bpq' interface.

There are all sorts of other possible configurations that you might try. The `netrom_call' and `rose_call' utilities work in similar ways. One amateur has used this utility to make connections to a remote BBS easier. Normally the users would have to manually enter a long connection string to make the call so he created an entry that made the BBS appear as though it were on the local network by having his ax25d proxy the connection to the remote machine.

18. Configuring the Rose Uplink and Downlink commands

If you are familiar with the ROM based Rose implementation you will be familiar with the method by which AX.25 users make calls across a Rose network. If a users local Rose node has the callsign VK2KTJ-5 and the AX.25 user wants to connect to VK5XXX at remote Rose node 5050882960 then they would issue the command:

```
c vk5xxx v vk2ktj-5 5050 882960
```

At the remote node, VK5XXX would see an incoming connection with the local AX.25 users callsign and being digipeated via the remote Rose nodes callsign.

The Linux Rose implementation does not support this capability in the kernel, but there are two application programs called rsuplnk and rsdwnlnk which perform this function.

18.1. Configuring a Rose downlink

To configure your Linux machine to accept a Rose connection and establish an AX.25 connection to any destination callsign that is not being listened for on your machine you need to add an entry to your

/etc/ax25/ax25d.conf file. Normally you would configure this entry to be the default behaviour for incoming Rose connections. For example you might have Rose listeners operating for destinations like NODE-0 or HEARD-0 that you wish to handle locally, but for all other destination calls you may want to pass them to the rsdwnlink command and assume they are AX.25 users.

A typical configuration would look like:

```
#
{* via rose}
NOCALL * * * * * * L
default * * * * * * - root /usr/sbin/rsdwnlnk rsdwnlnk 4800 vk2ktj-5
#
```

With this configuration any user who established a Rose connection to your Linux nodes address with a destination call of something that you were not specifically listening for would be converted into an AX.25 connection on the AX.25 port named 4800 with a digipeater path of VK2KTJ-5.

18.2. Configuring a Rose uplink

To configure your Linux machine to accept AX.25 connections in the same way that a ROM Rose node would you must add an entry into your /etc/ax25/ax25d.conf file that looks similar to the following:

```
#
[VK2KTJ-5* via 4800]
NOCALL * * * * * * L
default * * * * * * - root /usr/sbin/rsuplnk rsuplnk rose
#
```

Note the special syntax for the local callsign. The `*' character indicates that the application should be invoked if the callsign is heard in the digipeater path of a connection.

This configuration would allow an AX.25 user to establish Rose calls using the example connect sequence presented in the introduction. Anybody attempting to digipeat via VK2KTJ-5 on the AX.25 port named 4800 would be handled by the rsuplnk command.

19. Associating AX.25 callsigns with Linux users.

There are a number of situations where it is highly desirable to associate a callsign with a linux user account. One example might be where a number of amateur radio operators share the same linux machine and wish to use their own callsign when making calls. Another is the case of PMS users wanting to talk to a particular user on your machine.

The AX.25 software provides a means of managing this association of linux user account names with callsigns. We've mentioned it once already in the PMS section, but I'm spelling it out here to be sure

you don't miss it.

You make the association with the axparms command. An example looks like:

axparms -assoc vk2ktj terry

This command associates that AX.25 callsign vk2ktj with the user terry on the machine. So, for example, any mail for vk2ktj on the pms will be sent to Linux account terry.

Remember to put these associations into your rc file so that they are available each time your reboot.

Note you should never associate a callsign with the root account as this can cause configuration problems in other programs.

20. HOWTO link NOS and the Linux kernel networking software

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users.

20.1. Linking NOS and Linux using a pipe device

Brandon S. Allbery, KF8NH, contributed the following information to explain how to interconnect the NOS running on a Linux machine with the kernel code using the Linux pipe device.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this would be slow and costly. Linux provides a feature that many other Unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must choose a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyp[1-f] and the slave end of the pipes are known as: ttyp[1-f]. Remember they come in pairs, so if you select /dev/ptypf as your master end then you must use /dev/ttypf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program,

as the Linux kernel starts first and the master end of the pipe must
be opened first. You must also remember that your Linux kernel must
have a different IP address to your NOS, so you will need to allocate
a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to
create the slip link from your linux kernel you can use commands
similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptypf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 netmask 255.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88
and the NOS program is using IP address 44.70.248.67. The route
command in the last line simply tells your linux kernel to route all
datagrams for the amprnet via the slip link created by the slattach
command. Normally you would put these commands into your
/etc/rc.d/rc.inet2 file after all your other network configuration is
complete so that the slip link is created automatically when you
reboot. Note: there is no advantage in using cslip instead of slip as
it actually reduces performance because the link is only a virtual one
and occurs fast enough that having to compress the headers first takes
longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttypf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

These commands will create a slip port named `linux' via the slave end
of the pipe device pair to your linux kernel, and a route to it to
make it work. When you have started NOS you should be able to ping and
telnet to your NOS from your Linux machine and vice versa. If not,
double check that you have made no mistakes especially that you have
the addresses configured properly and have the pipe devices around the
right way.

21. The /proc/ file system entries.

The /proc filesystem contains a number of files specifically related
to the AX25 and NetRom kernel software. These files are normally used
by the AX52 utilities, but they are plainly formatted so you may be
interested in reading them. The format is fairly easily understood so
I don't think much explanation will be necessary.

/proc/net/arp
contains the list of Address Resolution Protocol mappings of IP
addresses to MAC layer protocol addresses. These can can AX.25,
ethernet or some other MAC layer protocol.

/proc/net/ax25
contains a list of AX.25 sockets opened. These might be
listening for a connection, or active sessions.

/proc/net/ax25_bpqether
contains the AX25 over ethernet BPQ style callsign mappings.

/proc/net/ax25_calls
contains the linux userid to callsign mappings set my the
axparms -assoc command.

/proc/net/ax25_route
contains AX.25 digipeater path information.

/proc/net/nr
contains a list of NetRom sockets opened. These might be
listening for a connection, or active sessions.

/proc/net/nr_neigh
contains information about the NetRom neighbours known to the
NetRom software.

/proc/net/nr_nodes
contains information about the NetRom nodes known to the NetRom
software.

/proc/net/rose
contains a list of Rose sockets opened. These might be listening
for a connection, or active sessions.

/proc/net/rose_nodes
contains a mapping of Rose destinations to Rose neighbours.

/proc/net/rose_neigh
contains a list of known Rose neighbours.

/proc/net/rose_routes
contains a list of all established Rose connections.

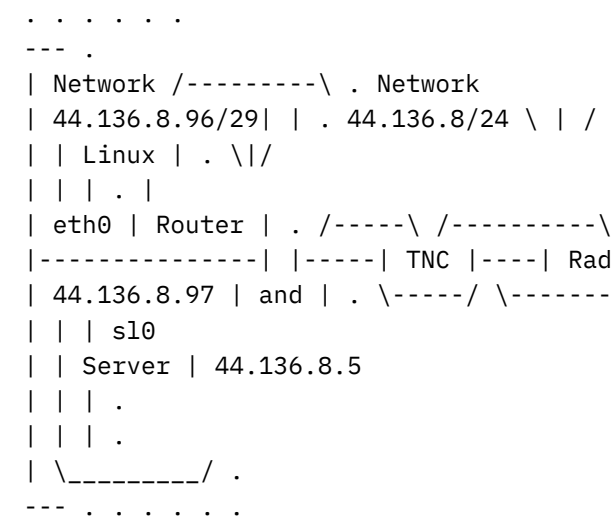
22. Some sample configurations.

Following are examples of the most common types of configurations.
These are guides only as there are as many ways of configuring your
network as there are networks to configure, but they may give you a
start.

22.1. Small Ethernet LAN with Linux as a router to Radio LAN

Many of you may have small local area networks at home and want to
connect the machines on that network to your local radio LAN. This is
the type of configuration I use at home. I arranged to have a suitable
block of addresses allocated to me that I could capture in a single
route for convenience and I use these on my Ethernet LAN. Your local
IP coordinator will assist you in doing this if you want to try it as
well. The addresses for the Ethernet LAN form a subset of the radio
LAN addresses. The following configuration is the actual one for my

linux router on my network at home:



```
#!/bin/sh
# /etc/rc.net
# This configuration provides one KISS based AX.25 port and one
# Ethernet device.

echo "/etc/rc.net"
echo " Configuring:"

echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."

echo -n " ethernet:"
/sbin/ifconfig eth0 44.136.8.97 netmask 255.255.255.248 \
broadcast 44.136.8.103 up
/sbin/route add 44.136.8.97 eth0
/sbin/route add -net 44.136.8.96 netmask 255.255.255.248 eth0
echo " done."

echo -n " AX.25: "
kissattach -i 44.136.8.5 -m 512 /dev/ttyS1 4800
ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.8.255
route add -host 44.136.8.5 sl0
route add -net 44.136.8.0 window 1024 sl0

echo -n " Netrom: "
nrattach -i 44.136.8.5 netrom

echo " Routing:"
/sbin/route add default gw 44.136.8.68 window 1024 sl0
echo " default route."
echo done.

# end
```

```
/etc/ax25/axports

# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz

/etc/ax25/nrports

# name callsign alias paclen description
netrom VK2KTJ-9 LINUX 235 Linux Switch Port

/etc/ax25/nrbroadcast

# ax25_name min_obs def_qual worst_qual verbose
4800 1 120 10 1
```

• You must have IP_FORWARDING enabled in your kernel.

• The AX.25 configuration files are pretty much those used as examples in the earlier sections, refer to those where necessary.

• I've chosen to use an IP address for my radio port that is not within my home network block. I needn't have done so, I could have easily used 44.136.8.97 for that port too.

• 44.136.8.68 is my local IPIP encapsulated gateway and hence is where I point my default route.

• Each of the machines on my Ethernet network have a route:

```
route add -net 44.0.0.0 netmask 255.0.0.0 \
gw 44.136.8.97 window 512 mss 512 eth0

The use of the mss and window parameters means that I can get optimum
performance from both local Ethernet and radio based connections.
```

• I also run my smail, http, ftp and other daemons on the router machine so that it needs to be the only machine to provide others with facilities.

```

- --- BEGIN Linux AX25 HOWTO part 1/3 ---

Linux AX25-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telstra.com.au
v1.4, 20 June 1997

The Linux Operating System is perhaps the only operating system in the
world that can boast native and standard support for the AX.25 packet
radio protocol utilised by Amateur Radio Operators worldwide. This
document aims to describe how to install and configure this support.

1. Introduction.

This document was originally an appendix to the HAM-HOWTO, but grew
too large to be reasonably managed in that fashion. This document
describes how to install and configure the native AX.25, NetRom and
Rose support for Linux. A few typical configurations are described
that could be used as models to work from.

The Linux implementation of the amateur radio protocols is very
flexible. To people relatively unfamiliar with the Linux operating
system the configuration process may look daunting and complicated. It
will take you a little time to come to understand how the whole thing
fits together. You will find configuration very difficult if you have
not properly prepared yourself by learning about Linux in general. You
cannot expect to switch from some other environment to Linux without
learning about Linux itself.

1.1. Changes from the previous version

Additions:
Added the section missing from the BayCom configuration section.
Added 'hdlcdrv' to the list of modules needed to 'insmod' for BayCom.
Added Rose Uplink and Downlink configuration - thanks Rick

Corrections/Updates:
Added kernel compile options into low level configuration section.
```

Removed that nasty axctl error.
Many small changes here and there to the BayCom and SoundModem sections.
Hopefully I've unconfused the kernel/tools issue.
Updated the home ftp site.

ToDo:
Fix up the SCC section, this is probably wrong.
Expand on the programming section.
Add some references to AX.25 and NetRom source documentation.

1.2. Other related documentation.

There is a lot of related documentation. There are many documents that relate to Linux networking in more general ways and I strongly recommend you also read these as they will assist you in your efforts and provide you with stronger insight into other possible configurations.

They are:

The HAM-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/HAM-HOWTO.html>,

the NET-3-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/NET-3-HOWTO.html>,

the Ethernet-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/Ethernet-HOWTO.html>,

and:

the Firewall-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/Firewall-HOWTO.html>

More general Linux information may be found by reference to other Linux HOWTO <http://sunsite.unc.edu/LDP/HOWTO/> documents.

2. Where to obtain new versions of this document.

The best place to obtain the latest version of this document is from a Linux Documentation Project archive. The Linux Documentation Project runs a Web Server and this document appears there as The AX25-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/AX25-HOWTO.html>. You can always contact me, but I pass new versions of the document directly to the LDP HOWTO coordinator, so if it isn't there then chances are I haven't finished it.

3. The Packet Radio Protocols and Linux.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as TCP/IP and NetRom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

The NetRom protocol is an attempt at a full network protocol and uses AX.25 at its lowest layer as a datalink protocol. It provides a network layer that is an adapted form of AX.25. The NetRom protocol features dynamic routing and node aliases.

The Rose protocol was conceived and first implemented by Tom Moulton W2VY and is an implementation of the X.25 packet layer protocol and is designed to operate with AX.25 as its datalink layer protocol. It too provides a network layer. Rose addresses take the form of 10 digit numbers. The first four digits are called the Data Network Identification Code (DNIC) and are taken from Appendix B of the CCITT X.121 recommendation. More information on the Rose protocol may be ontained from the RATS Web server <http://www.rats.org/>.

Alan Cox developed some early kernel based AX.25 software support for Linux. Jonathon Naylor <g4klx@g4klx.demon.co.uk> has taken up ongoing development of the code, has added NetRom and Rose support and is now the developer of the AX.25 related kernel code. DAMA support was developed by Joerg, DL1BKE, jreuter@lykos.tng.oche.de. Baycom and SoundModem support were added by Thomas Sailer, <sailer@ife.ee.ethz.ch>. The AX.25 utility software is now maintained by me.

The Linux code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card, the Gracilis PacketTwin card and other Z8530 SCC based cards with the generic SCC driver and both the Parallel and Serial port Baycom modems. Thomas's new soundmodem driver supports Soundblaster and soundcards based on the Crystal chipset.

The User programs contain a simple PMS (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol. Included also are an AX.25 server style program to handle and despatch incoming AX.25 connections and a NetRom daemon which does most of the hard work for NetRom support.

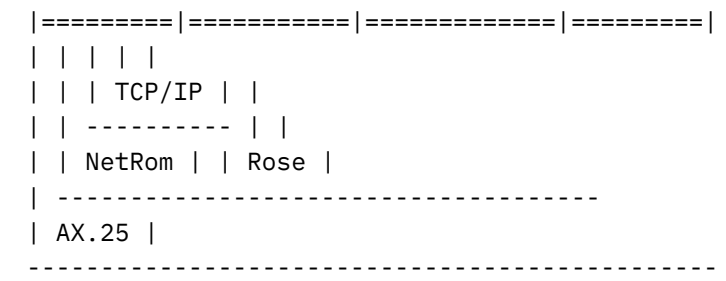
3.1. How it all fits together.

The Linux AX.25 implementation is a brand new implementation. While in many ways it may looks similar to NOS, or BPQ or other AX.25 implementations, it is none of these and is not identical to any of them. The Linux AX.25 implementation is capable of being configured to behave almost identically to other implementations, but the configuration process is very different.

To assist you in understanding how you need to think when configuring this section describes some of the structural features of the AX.25 implementation and how it fits into the context of the overall Linux structure.

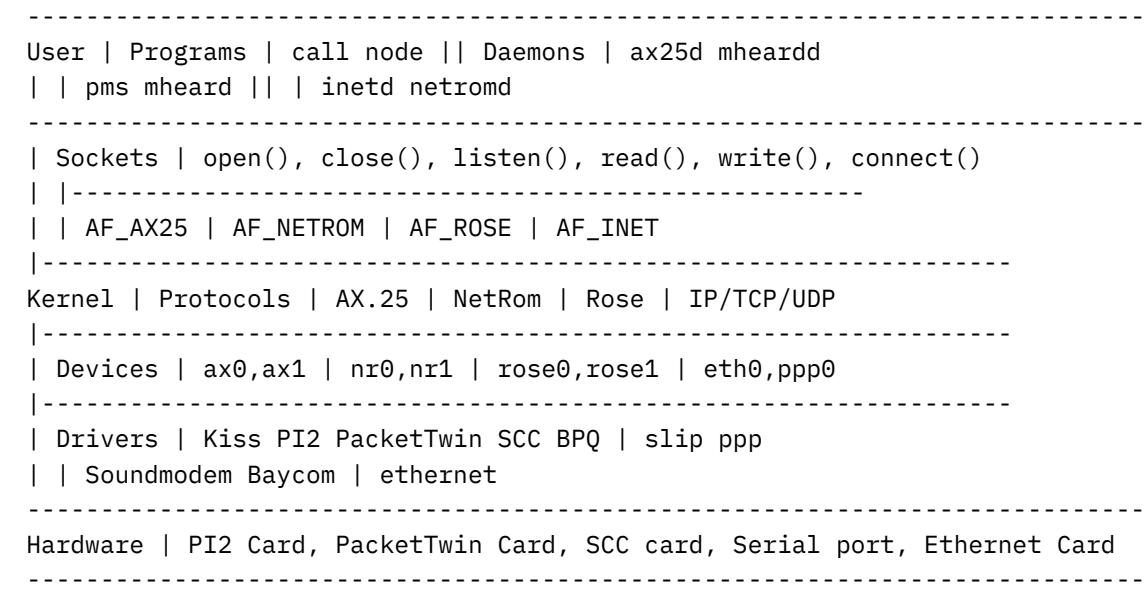
Simplified Protocol Layering Diagram

```
-----------------------------------------------
| AF_AX25 | AF_NETROM | AF_INET | AF_ROSE |
```



This diagram simply illustrates that NetRom, Rose and TCP/IP all run directly on top of AX.25, but that each of these protocols is treated as a seperate protocol at the programming interface. The `AF_' names are simply the names given to the `Address Family' of each of these protocols when writing programs to use them. The important thing to note here is the implicit dependence on the configuration of your AX.25 devices before you can configure your NetRom, Rose or TCP/IP devices.

Software module diagram on Linux Network Implementation



User | Programs | call node || Daemons | ax25d mheardd
| | pms mheard || | inetd netromd
| Sockets | open(), close(), listen(), read(), write(), connect()
| | AF_AX25 | AF_NETROM | AF_ROSE | AF_INET
Kernel | Protocols | AX.25 | NetRom | Rose | IP/TCP/UDP
| Devices | ax0,ax1 | nr0,nr1 | rose0,rose1 | eth0,ppp0
| Drivers | Kiss PI2 PacketTwin SCC BPQ | slip ppp
| | Soundmodem Baycom | ethernet
Hardware | PI2 Card, PacketTwin Card, SCC card, Serial port, Ethernet Card

This diagram is a little more general than the first. This diagram attempts to show the relationship between user applications, the ker&#65533;nel and the hardware. It also shows the relationship between the Socket application programming interface, the actual protocol modules, the kernel networking devices and the device drivers. Anything in this diagram is dependent on anything underneath it, and in general you must configure from the bottom of the diagram upwards. So for exam&#65533;ple, if you want to run the call program you must also configure the Hardware, then ensure that the kernel has the appropriate device driver, that you create the appropriate network device, that the ker&#65533;nel includes the desired protocol that presents a programming inter&#65533;face that the call program can use. I have attempted to lay out this document in roughly that order.

4. The AX.25/NetRom/Rose software components.

The AX.25 software is comprised of three components, the kernel source, the network configuration tools and the utility programs.

The version 2.0.xx Linux kernels include the AX.25, NetRom, Z8530 SCC, PI card and PacketTwin drivers by default. These have been significantly enhanced in the 2.1.* kernels. Unfortunately, the rest of the 2.1.* kernels makes them fairly unstable at the moment and not a good choice for a production system. To solve this problem Jonathon Naylor has prepared a patch kit which will bring the amateur radio protocol support in a 2.0.28 kernel up to the standard of the 2.1.* kernels. This is very simple to apply, and provides a range of facilities not present in the standard kernel such as Rose support.

4.1. Finding the kernel, tools and utility packages.

4.1.1. The kernel source:

The kernel source can be found in its usual place at:

ftp.funet.fi

/pub/Linux/PEOPLE/Linus/v2.0/linux-2.0.30.tar.gz

The current version of Jonathons upgrade patch is available at:

ftp.pspt.fi

/pub/linux/ham/ax25/ax25-module-14b.tar.gz

4.1.2. The network tools:

The latest alpha release of the standard Linux network tools support AX.25 and NetRom and can be found at:

ftp.inka.de

/pub/comp/Linux/networking/net-tools/net-tools-1.33.tar.gz

The latest ipfwadm package can be found at:

ftp.xos.nl

/pub/linux/ipfwadm/

4.1.3. The AX25 utilities:

There are two different families of AX25-utilities. One is for the 2.0.* kernels and the other will work with either the 2.1.* kernels or the 2.0.*+moduleXX kernels. The ax25-utils version number indicate the oldest version of kernel that they will work with. Please choose a version of the ax25-utils appropriate to your kernel. The following are working combinations. You must use one of the following combinations, any other combination will not work, or will not work well.

```
Linux Kernel AX25 Utility set
-------------------- -------------------------
linux-2.0.29 ax25-uitls-2.0.12c.tar.gz
linux-2.0.28+module12 ax25-utils-2.1.22b.tar.gz
linux-2.0.30+module14 ax25-utils-2.1.42.tar.gz
linux-2.1.22++ ax25-utils-2.1.22b.tar.gz
linux-2.1.42++ ax25-utils-2.1.42.tar.gz
```

The AX.25 utility programs can be found at:

ftp.pspt.fi <ftp://ftp.pspt.fi/pub/linux/ham/ax25/>

or at:

sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

5. Installing the AX.25/NetRom/Rose software.

To successfully install AX.25 support on your linux system you must configure and install an appropriate kernel and then install the AX.25 utilities.

5.1. Compiling the kernel.

If you are already familiar with the process of compiling the Linux Kernel then you can skip this section, just be sure to select the appropriate options when compiling the kernel. If you are not, then read on.

The normal place for the kernel source to be unpacked to is the /usr/src directory into a subdirectory called linux. To do this you should be logged in as root and execute a series of commands similar to the following:

```
# mv linux linux.old
# cd /usr/src
# tar xvfz linux-2.0.30.tar.gz
# tar xvfz /pub/net/ax25/ax25-module-14b.tar.gz
# patch -p0 </usr/src/ax25-module-14b/ax25-2.0.30-2.1.42-5.diff
# cd linux
```

After you have unpacked the kernel source and applied the upgrade, you need to run the configuration script and choose the options that suit your hardware configuration and the options that you wish built into your kernel. You do this by using the command:

```
# make menuconfig
```

You might also try:

```
# make config
```

I'm going to describe the full screen method (menuconfig) because it is easier to move around, but you use whichever you are most comfortable with.

In either case you will be offered a range of options at which you must answer `Y' or `N'. (Note you may also answer `M' if you are using modules. For the sake of simplicity I will assume you are not, please make appropriate modifications if you are).

The options most relevant to an AX.25 configuration are:

```
Code maturity level options --->
...
[*] Prompt for development and/or incomplete code/drivers
...
General setup --->
...
[*] Networking support
...
Networking options --->
...
[*] TCP/IP networking
[?] IP: forwarding/gatewaying
...
[?] IP: tunneling
...
[?] IP: Allow large windows (not recommended if <16Mb of memory)
...
[*] Amateur Radio AX.25 Level 2
[?] Amateur Radio NET/ROM
[?] Amateur Radio X.25 PLP (Rose)
...
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[?] BAYCOM ser12 and par96 driver for AX.25
[?] Soundcard modem driver for AX.25
[?] Soundmodem support for Soundblaster and compatible cards
[?] Soundmodem support for WSS and Crystal cards
[?] Soundmodem support for 1200 baud AFSK modulation
[?] Soundmodem support for 4800 baud HAPN-1 modulation
[?] Soundmodem support for 9600 baud FSK G3RUH modulation
[?] Serial port KISS driver for AX.25
[?] BPQ Ethernet driver for AX.25
[?] Gracilis PackeTwin support for AX.25
[?] Ottawa PI and PI/2 support for AX.25
[?] Z8530 SCC KISS emulation driver for AX.25
...
```

The options I have flagged with a `*' are those that you must must answer `Y' to. The rest are dependent on what hardware you have and what other options you want to include. Some of these options are described in more detail later on, so if you don't know what you want yet, then read ahead and come back to this step later.

After you have completed the kernel configuration you should be able
to cleanly compile your new kernel:

```
# make dep
# make clean
# make zImage
```

maake sure you move your arch/i386/boot/zImage file wherever you want
it and then edit your /etc/lilo.conf file and rerun lilo to ensure
that you actually boot from it.

5.1.1. A word about Kernel modules

I recommend that you don't compile any of the drivers as modules. In
nearly all installations you gain nothing but additional complexity.
Many people have problems trying to get the modularised components
working, not because the software is faulty but because modules are
more complicated to install and configure.

If you've chosen to compile any of the components as modules, then
you'll also need to use:

```
# make modules
# make modules_install
```

to install your modules in the appropriate location.

You will also need to add some entries into your /etc/conf.modules
file that will ensure that the kerneld program knows how to handle the
kernel modules. You should add/modify the following:

```
alias net-pf-3 ax25
alias net-pf-6 netrom
alias net-pf-11 rose
alias tty-ldisc-1 slip
alias tty-ldisc-3 ppp
alias tty-ldisc-5 mkiss
alias bc0 baycom
alias nr0 netrom
alias pi0a pi2
alias pt0a pt
alias scc0 optoscc (or one of the other scc drivers)
alias sm0 soundmodem
alias tunl0 newtunnel
alias char-major-4 serial
alias char-major-5 serial
alias char-major-6 lp
```

5.1.2. What's new in 2.0.*+ModuleXX or 2.1.* Kernels ?

The 2.1.* kernels have enhanced versions of nearly all of the
protocols and drivers. The most significant of the enhancements are:

modularised
the protocols and drivers have all been modularised so that you

can insmod and rmmod them whenever you wish. This reduces the
kernel memory requirements for infrequently used modules and
makes development and bug hunting much simpler. That being said,
it also makes configuration slightly more difficult.

All drivers are now network drivers
all of the network devices such as Baycom, SCC, PI, Packettwin
etc now present a normal network interface, that is they now
look like the ethernet driver does, they no longer look like
KISS TNC's. A new utility called net2kiss allows you to build a
kiss interface to these devices if you wish.
bug fixed
there have been many bug fixes and new features added to the
drivers and protocols. The Rose protocol is one important
addition.

5.2. The network configuration tools.

Now that you have compiled the kernel you should compile the new
network configuration tools. These tools allow you to modify the
configuration of network devices and to add routes to the routing
table.

The new alpha release of the standard net-tools package includes
support for AX.25 and NetRom support. I've tested this and it seems to
work well for me.

5.2.1. Building the standard net-tools release.

Don't forget to read the Release file and follow any instructions
there. The steps I used to compile the tools were:

```
# cd /usr/src
# tar xvfz net-tools-1.33.tar.gz
# cd net-tools-1.33
# make config
```

At this stage you will be presented with a series of configuration
questions, similar to the kernel configuration questions. Be sure to
include support for all of the protocols and network devices types
that you intend to use. If you do not know how to answer a particular
question then answer `Y'.

The tools will compile cleanly against the source after you remove the
first line "usage und man page, info text von alexey" from the file
arp.c.

When the compilation is complete, you should use the:

```
# make install
```

command to install the programs in their proper place.

If you wish to use the IP firewall facilities then you will need the
latest firewall administration tool ipfwadm. This tool replaces the
older ipfw tool which will not work with new kernels.

I compiled the ipfwadm utility with the following commands:

```
# cd /usr/src
# tar xvfz ipfwadm-2.0beta2.tar.gz
# cd ipfwadm-2.0beta2
# make install
# cp ipfwadm.8 /usr/man/man8
# cp ipfw.4 /usr/man/man4
```

5.3. The AX.25 user and utility programs.

After you have successfully compiled and booted your new kernel, you
need to compile the user programs. To compile and install the user
programs you should use a series of commands similar to the following:

```
# cd /usr/src
# tax xvfz ax25-utils-2.1.42.tar.gz
# cd ax25-utils-2.1.42
# make config
# make
# make install
```

The files will be installed under the /usr directory by default in
subdirectories: bin, sbin, etc and man.

If this is a first time installation, that is you've never installed
any ax25 utilities on your machine before you should also use the:

```
# make installconf
```

command to install some sample configuration files into the /etc/ax25/
directory from which to work.

If you get messages something like:

```
gcc -Wall -Wstrict-prototypes -O2 -I../lib -c call.c
call.c: In function `statline':
call.c:268: warning: implicit declaration of function `attron'
call.c:268: `A_REVERSE' undeclared (first use this function)
call.c:268: (Each undeclared identifier is reported only once
call.c:268: for each function it appears in.)
```

then you should double check that you have the ncurses package
properly installed on your system. The configuration script attempts
to locate your ncurses packages in the common locations, but some
installations have ncurses badly installed and it is unable to locate
them.

6. A note on callsigns, addresses and things before we start.

Each AX.25 and NetRom port on your system must have a callsign/ssid
allocated to it. These are configured in the configuration files that

will be described in detail later on.

Some AX.25 implementations such as NOS and BPQ will allow you to configure the same callsign/ssid on each AX.25 and NetRom port. For somewhat complicated technical reasons Linux does not allow this. This isn't as big a problem in practise as it might seem.

This means that there are things you should be aware of and take into consideration when doing your configurations.

1. Each AX.25 and NetRom port must be configured with a unique callsign/ssid.

2. TCP/IP will use the callsign/ssid of the AX.25 port it is being transmitted or received by, ie the one you configured for the AX.25 interface in point 1.

3. NetRom will use the callsign/ssid specified for it in its configuration file, but this callsign is only used when your NetRom is speaking to another NetRom, this is not the callsign/ssid that AX.25 users who wish to use your NetRom `node' will use. More on this later.

4. Rose will, by default, use the callsign/ssid of the AX.25 port, unless the Rose callsign has been specifically set using the `rsparms' command. If you set a callsign/ssid using the `rsparms' command then Rose will use this callsign/ssid on all ports.

5. Other programs, such as the `ax25d' program can listen using any callsign/ssid that they wish and these may be duplicated across different ports.

6. If you are careful with routing you can configure the same IP address on all ports if you wish.

6.1. What are all those T1, T2, N2 and things ?

Not every AX.25 implementation is a TNC2. Linux uses nomenclature that differs in some respects from that you will be used to if your sole experience with packet is a TNC. The following table should help you interpret what each of the configurable items are, so that when you come across them later in this text you'll understand what they mean.

Linux	TAPR TNC	Description
T1	FRACK	How long to wait before retransmitting an unacknowledged frame.
T2	RESPTIME	The minimum amount of time to wait for another frame to be received before transmitting an acknowledgement.
T3	CHECK	The period of time we wait between sending

| | a check that the link is still active.

N2 | RETRY | How many times to retransmit a frame before
| | assuming the connection has failed.

Idle | | The period of time a connection can be idle
| | before we close it down.

Window | MAXFRAME | The maximum number of unacknowledged
| | transmitted frames.

6.2. Run time configurable parameters

The 2.1.* and 2.0.* +moduleXX kernels have a new feature that allows you to change many previously unchangable parameters at run time. If you take a careful look at the /proc/sys/net/ directory structure you will see many files with useful names that describe various parameters for the network configuration. The files in the /proc/sys/net/ax25/ directory each represents one configured AX.25 port. The name of the file relates to the name of the port.

The structure of the files in /proc/sys/net/ax25/<portname>/ is as follows:

FileName Meaning Values Default
ip_default_mode IP Default Mode 0=DG 1=VC 0
ax25_default_mode AX.25 Default Mode 0=Normal 1=Extended 0
backoff_type Backoff 0=Linear 1=Exponential 1
connect_mode Connected Mode 0=No 1=Yes 1
standard_window_size Standard Window 1 <= N <= 7 2
extended_window_size Extended Window 1 <= N <= 63 32
t1_timeout T1 Timeout 1s <= N <= 30s 10s
t2_timeout T2 Timeout 1s <= N <= 20s 3s
t3_timeout T3 Timeout 0s <= N <= 3600s 300s
idle_timeout Idle Timeout 0m <= N 20m
maximum_retry_count N2 1 <= N <= 31 10
maximum_packet_length AX.25 Frame Length 1 <= N <= 512 256

In the table T1, T2 and T3 are given in seconds, and the Idle Timeout is given in minutes. But please note that the values used in the sysctl interface are given in internal units where the time in seconds is multiplied by 10, this allows resolution down to 1/10 of a second. With timers that are allowed to be zero, eg T3 and Idle, a zero value indicates that the timer is disabled.

The structure of the files in /proc/sys/net/netrom/ is as follows:

FileName Values Default
default_path_quality 10
link_fails_count 2
network_ttl_initialiser 16

obsolescence_count_initialiser 6
routing_control 1
transport_acknowledge_delay 50
transport_busy_delay 1800
transport_maximum_tries 3
transport_requested_window_size 4
transport_timeout 1200

The structure of the files in /proc/sys/net/rose/ is as follows:

FileName Values Default
acknowledge_hold_back_timeout 50
call_request_timeout 2000
clear_request_timeout 1800
link_fail_timeout 1200
maximum_virtual_circuits 50
reset_request_timeout 1800
restart_request_timeout 1800
routing_control 1
window_size 3

To set a parameter all you need to do is write the desired value to
the file itself, for example to check and set the Rose window size
you'd use something like:

```
# cat /proc/sys/net/rose/window_size
3
# echo 4 >/proc/sys/net/rose/window_size
# cat /proc/sys/net/rose/window_size
4
```

7. Configuring an AX.25 port.

Each of the AX.25 applications read a particular configuration file to
obtain the parameters for the various AX.25 ports configured on your
Linux machine. For AX.25 ports the file that is read is the
/etc/ax25/axport file. You must have an entry in this file for each
AX.25 port you want on your system.

7.1. Creating the AX.25 network device.

The network device is what is listed when you use the `ifconfig'
command. This is the object that the Linux kernel sends and receives
network data from. Nearly always the network device has a physical
port associated with it, but there are occasions where this isn't
necessary. The network device does relate directly to a device driver.

In the Linux AX.25 code there are a number of device drivers. The most
common is probably the KISS driver, but others are the SCC driver(s),
the Baycom driver and the SoundModem driver.
Each of these device drivers will create a network device when it is
started.

7.1.1. Creating a KISS device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Serial port KISS driver for AX.25
```

Probably the most common configuration will be for a KISS TNC on a serial port. You will need to have the TNC preconfigured and connected to your serial port. You can use a communications program like minicom or seyon to configure the TNC into kiss mode.

To create a KISS device you use the kissattach program. In it simplest form you can use the kissattach program as follows:

```
# /usr/sbin/kissattach /dev/ttyS0 radio
# kissparms -p radio -t 100 -s 100 -r 25
```

The kissattach command will create a KISS network device. These devices are called `ax[0-9]'. The first time you use the kissattach command it creates `ax0', the second time it creates `ax1' etc. Each KISS device has an associated serial port.

The kissparms command allows you to set various KISS parameters on a KISS device.

Specifically the example presented would create a KISS network device using the serial device `/dev/ttyS0' and the entry from the /etc/ax25/axports with a port name of `radio'. It then configures it with a txdelay and slottime of 100 milliseconds and a ppersist value of 25.

Please refer to the man pages for more information.

7.1.1.1. Configuring for Dual Port TNC's

The mkiss utility included in the ax25-utils distribution allows you to make use of both modems on a dual port TNC. Configuration is fairly simple. It works by taking a single serial device connected to a single multiport TNC and making it look like a number of devices each connected to a single port TNC. You do this before you do any of the AX.25 configuration. The devices that you then do the AX.25 configuration on are pseudo-TTY interfaces, (/dev/ttyp*), and not the actual serial device. Pseudo-TTY devices create a kind of pipe through which programs designed to talk to tty devices can talk to other programs designed to talk to tty devices. Each pipe has a master and a slave end. The master end is generally called `/dev/ptyp*' and the slave ends are called `/dev/ttyp*'. There is a one to one relationship between masters and slaves, so /dev/ptyp0 is the master end of a pipe with /dev/ttyp0 as its slave. You must open the master end of a pipe

before opening the slave end. mkiss exploits this mechanism to split a single serial device into seperate devices.

Example: if you have a dual port tnc and it is connected to your /dev/ttyS0 serial device at 9600 bps, the command:

```
# /usr/sbin/mkiss -s 9600 /dev/ttyS0 /dev/ptyp0 /dev/ptyp1
# /usr/sbin/kissattach /dev/ttyp0 port1
# /usr/sbin/kissattach /dev/ttyp1 port2
```

would create two pseudo-tty devices that each look like a normal single port TNC. You would then treat /dev/ttyp0 and /dev/ttyp1 just as you would a conventional serial device with TNC connected. This means you'd then use the kissattach command as described above, on each of those, in the example for AX.25 ports called port1 and port2. You shouldn't use kissattach on the actual serial device as the mkiss program uses it.

The mkiss command has a number of optional arguments that you may wish to use. They are summarised as follows:

-c enables the addition of a one byte checksum to each KISS frame. This is not supported by most KISS implementation, it is supported by the G8BPG KISS rom.

-s <speed>
sets the speed of the serial port.

-h enables hardware handshaking on the serial port, it is off by default. Most KISS implementation do not support this, but some do.

-l enables logging of information to the syslog logfile.

7.1.2. Creating a Baycom device.

Kernel Compile Options:

```
Code maturity level options --->
[*] Prompt for development and/or incomplete code/drivers
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] BAYCOM ser12 and par96 driver for AX.25
```

Thomas Sailer, <sailer@ife.ee.ethz.ch>, despite the popularly held belief that it would not work very well, has developed Linux support for Baycom modems. His driver supports the Ser12 serial port, Par96 and the enhanced PicPar parallel port modems. Further information about the modems themselves may be obtained from the Baycom Web site <http://www.baycom.de/>.

Your first step should be to determine the i/o and addresses of the serial or parallel port(s) you have Baycom modem(s) connected to. When you have these you must configure the Baycom driver with them.

The BayCom driver creates network devices called: bc0, bc1, bc2 etc. when it is configured.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one Baycom modem installed you may specify the parameters on the insmod commmand line when you load the Baycom module.

For example, a simple configuration. Disable the serial driver for COM1: then configure the Baycom driver for a Ser12 serial port modem on COM1: with the software DCD option enabled:

```
# setserial /dev/ttyS0 uart none
# insmod hdlcdrv
# insmod baycom mode="ser12*" iobase=0x3f8 irq=4
```

Par96 parallel port type modem on LPT1: using hardware DCD detection:

```
# insmod hdlcdrv
# insmod baycom mode="par96" iobase=0x378 irq=7 options=0
```

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the Baycom module using:

```
# insmod hdlcdrv
# insmod baycom
```

or that you compiled the kernel with the driver inbuilt.

Configure the bc0 device driver as a Parallel port Baycom modem on LPT1: with software DCD:

```
# sethdlc -p -i bc0 mode par96 io 0x378 irq 7
```

Configure the bc1 device driver as a Serial port Baycom modem on COM1:

```
# sethdlc -p -i bc1 mode "ser12*" io 0x3f8 irq 4
```

7.1.3. Configuring the AX.25 channel access parameters.

The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. Again you use the sethdlc utility for this.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the bc0 device with TxDelay of 200 mS, SlotTime of 100 mS, PPersist of 40 and half duplex:

```
# sethdlc -i bc0 -a txd 200 slot 100 ppersist 40 half
```

Note that the timing values are in milliseconds.

7.1.3.1. Configuring the Kernel AX.25 to use the BayCom device

The BayCom driver creates standard network devices that the AX.25 Kernel code can use. Configuration is much the same as that for a PI or PacketTwin card.

The first step is to configure the device with an AX.25 callsign. The ifconfig utility may be used to perform this.

```
# /sbin/ifconfig bc0 hw ax25 VK2KTJ-15 up
```

will assign the BayCom device bc0 the AX.25 callsign VK2KTJ-15. Alternatively you can use the axparms command, you'll still need to use the ifconfig command to bring the device up though:

```
# ifconfig bc0 up
# axparms -setcall bc0 vk2ktj-15
```

The next step is to create an entry in the /etc/ax25/axports file as you would for any other device. The entry in the axports file is associated with the network device you've configured by the callsign you configure. The entry in the axports file that has the callsign that you configured the BayCom device with is the one that will be used to refer to it.

You may then treat the new AX.25 device as you would any other. You can configure it for TCP/IP, add it to ax25d and run NetRom or Rose over it as you please.

7.1.4. Creating a SoundModem device.

Kernel Compile Options:

```
Code maturity level options --->
[*] Prompt for development and/or incomplete code/drivers
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Soundcard modem driver for AX.25
[?] Soundmodem support for Soundblaster and compatible cards
[?] Soundmodem support for WSS and Crystal cards
[?] Soundmodem support for 1200 baud AFSK modulation
[?] Soundmodem support for 4800 baud HAPN-1 modulation
[?] Soundmodem support for 9600 baud FSK G3RUH modulation
```

Thomas Sailer has built a new driver for the kernel that allows you to use your soundcard as a modem. Connect your radio directly to your soundcard to play packet! Thomas recommends at least a 486DX2/66 if you want to use this software as all of the digital signal processing is done by the main CPU.

The driver currently emulates 1200 bps AFSK, 4800 HAPN and 9600 FSK (G3RUH compatible) modem types. The only sound cards currently supported are SoundBlaster and WindowsSoundSystem Compatible models. The sound cards require some circuitry to help them drive the Push-To-Talk circuitry, and information on this is available from Thomas's SoundModem PTT circuit web page <http://www.ife.ee.ethz.ch/~sailer/pcf/ptt_circ/ptt.html>. There are quite a few possible options, they are: detect the sound output from the soundcard, or use output from a parallel port, serial port or midi port. Circuit examples for each of these are on Thomas's site.

The SoundModem driver creates network devices called: sm0, sm1, sm2 etc when it is configured.

Note: the SoundModem driver competes for the same resources as the Linux sound driver. So if you wish to use the SoundModem driver you must ensure that the Linux sound driver is not installed. You can of course compile them both as modules and insert and remove them as you wish.

7.1.4.1. Configuring the sound card.

The SoundModem driver does not initialise the sound card. The ax25-utils package includes a utility to do this called `setcrystal' that may be used for SoundCards based on the Crystal chipset. If you have some other card then you will have to use some other software to initialise it. Its syntax is fairly straightforward:

setcrystal [-w wssio] [-s sbio] [-f synthio] [-i irq] [-d dma] [-c dma2]

So, for example, if you wished to configure a soundblaster card at i/o base address 0x388, irq 10 and DMA 1 you would use:
setcrystal -s 0x388 -i 10 -d 1

To configure a WindowSoundSystem card at i/o base address 0x534, irq 5, DMA 3 you would use:

setcrystal -w 0x534 -i 5 -d 3

The [-f synthio] parameter is the set the synthesiser address, and the [-c dma2] parameter is to set the second DMA channel to allow full duplex operation.

7.1.4.2. Configuring the SoundModem driver.

When you have configured the soundcard you need to configure the driver telling it where the sound card is located and what sort of modem you wish it to emulate.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one soundcard installed you may specify the parameters on the insmod commmand line when you load the SoundModem module.

For example, a simple configuration, with one SoundBlaster soundcard configured as described above emulating a 1200 bps modem:

```
# insmod hdlcdrv
# insmod soundmodem mode="sbc:afsk1200" iobase=0x220 irq=5 dma=1
```

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the SoundModem modules using:

```
# insmod hdlcdrv
# insmod soundmodem
```

or that you compiled the kernel with the driver inbuilt.

Configure the driver to support the WindowsSoundSystem card we configured above to emulate a G3RUH 9600 compatible modem as device sm0 using a parallel port at 0x378 to key the Push-To-Talk:

```
# sethdlc -p -i sm0 mode wss:fsk9600 io 0x534 irq 5 dma 3 pario 0x378
```

Configure the driver to support the SoundBlaster card we configured above to emulate a 4800 bps HAPN modem as device sm1 using the serial port located at 0x2f8 to key the Push-To-Talk:

```
# sethdlc -p -i sm1 mode sbc:hapn4800 io 0x388 irq 10 dma 1 serio 0x2f8
```

Configure the driver to support the SoundBlaster card we configured above to emulate a 1200 bps AFSK modem as device sm1 using the serial port located at 0x2f8 to key the Push-To-Talk:

```
# sethdlc -p -i sm1 mode sbc:afsk1200 io 0x388 irq 10 dma 1 serio 0x2f8
```

7.1.4.3. Configuring the AX.25 channel access parameters.

The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. You use the sethdlc utility for this as well.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the sm0 device with TxDelay of 100 mS, SlotTime of 50mS, PPersist of 128 and full duplex:

```
# sethdlc -i sm0 -a txd 100 slot 50 ppersist 128 full
```

Note that the timing values are in milliseconds.

7.1.4.4. Setting the audio levels and tuning the driver.

It is very important that the audio levels be set correctly for any radio based modem to work. This is equally true of the SoundModem. Thomas has developed some utility programs that make this task easier. They are called smdiag and smmixer.

smdiag
provides two types of display, either an oscilloscope type display or an eye pattern type display.

smmixer
allows you to actually adjust the transmit and receive audio levels.

To start the smdiag utility in 'eye' mode for the SoundModem device sm0 you would use:

```
# smdiag -i sm0 -e
```

To start the smmixer utility for the SoundModem device sm0 you would use:

```
# smmixer -i sm0
```

7.1.4.5. Configuring the Kernel AX.25 to use the SoundModem

The SoundModem driver creates standard network devices that the AX.25 Kernel code can use. Configuration is much the same as that for a PI or PacketTwin card.

The first step is to configure the device with an AX.25 callsign. The ifconfig utility may be used to perform this.

```
# /sbin/ifconfig sm0 hw ax25 VK2KTJ-15 up
```

will assign the SoundModem device sm0 the AX.25 callsign VK2KTJ-15. Alternatively you can use the axparms command, but you still need the ifconfig utility to bring the device up:

```
# ifconfig sm0 up
# axparms -setcall sm0 vk2ktj-15
```

The next step is to create an entry in the /etc/ax25/axports file as you would for any other device. The entry in the axports file is associated with the network device you've configured by the callsign you configure. The entry in the axports file that has the callsign that you configured the SoundModem device with is the one that will be used to refer to it.

You may then treat the new AX.25 device as you would any other. You can configure it for TCP/IP, add it to ax25d and run NetRom or Rose over it as you please.

7.1.5. Creating a PI card device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Ottawa PI and PI/2 support for AX.25
```

The PI card device driver creates devices named `pi[0-9][ab]'. The first PI card detected will be allocated `pi0', the second `pi1' etc. The `a' and `b' refer to the first and second physical interface on the PI card. If you have built your kernel to include the PI card driver, and the card has been properly detected then you can use the following command to configure the network device:

```
# /sbin/ifconfig pi0a hw ax25 VK2KTJ-15 up
```

This command would configure the first port on the first PI card detected with the callsign VK2KTJ-15 and make it active. To use the device all you now need to do is to configure an entry into your /etc/ax25/axports file with a matching callsign/ssid and you will be ready to continue on.

The PI card driver was written by David Perry, <dp@hydra.carleton.edu>

7.1.6. Creating a PacketTwin device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Gracilis PackeTwin support for AX.25
```

The PacketTwin card device driver creates devices named `pt[0-9][ab]'. The first PacketTwin card detected will be allocated `pt0', the second `pt1' etc. The `a' and `b' refer to the first and second physical interface on the PacketTwin card. If you have built your kernel to include the PacketTwin card driver, and the card has been properly detected then you can use the following command to configure the network device:

```
# /sbin/ifconfig pt0a hw ax25 VK2KTJ-15 up
```

This command would configure the first port on the first PacketTwin card detected with the callsign VK2KTJ-15 and make it active. To use the device all you now need to do is to configure an entry into your /etc/ax25/axports file with a matching callsign/ssid and you will be ready to continue on.

The PacketTwin card driver was written by Craig Small VK2XLZ, <csmall@triode.apana.org.au>.

7.1.7. Creating a generic SCC device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Z8530 SCC KISS emulation driver for AX.25
```

Joerg Reuter, DL1BKE, jreuter@lykos.tng.oche.de has developed generic support for Z8530 SCC based cards. His driver is configurable to support a range of different types of cards and present an interface that looks like a KISS TNC so you can treat it as though it were a KISS TNC.

7.1.7.1. Obtaining and building the configuration tool package.

While the kernel driver is included in the standard kernel distribution, Joerg distributes more recent versions of his driver with the suite of configuration tools that you will need to obtain as well.

You can obtain the configuration tools package from:

db0bm.automation.fh-aachen.de

/incoming/dl1bke/

or:

insl1.etec.uni-karlsruhe.de

/pub/hamradio/linux/z8530/

or:

ftp.ucsd.edu

/hamradio/packet/tcpip/linux
/hamradio/packet/tcpip/incoming/

You will find multiple versions, choose the one that best suits the kernel you intend to use:

z8530drv-2.4a.dl1bke.tar.gz 2.0.*
z8530drv-utils-3.0.tar.gz 2.1.6 or greater

The following command were what I used to compile and install the package for kernel version 2.0.25:

```
# cd /usr/src
# gzip -dc z8530drv-2.4a.dl1bke.tar.gz | tar xvpofz -
# cd z8530drv
# make clean
```

```
# make dep
# make module # If you want to build the driver as a module
# make for_kernel # If you want the driver to built into your kernel
# make install
```

After the above is complete you should have three new programs installed in your /sbin directory: gencfg, sccinit and sccstat. It is these programs that you will use to configure the driver for your card.

You will also have a group of new special device files created in your /dev called scc0 .. scc7. These will be used later and will be the `KISS' devices you will end up using.

If you chose to 'make for_kernel' then you will need to recompile your kernel. To ensure that you include support for the z8530 driver you must be sure to answer `Y' to: `Z8530 SCC kiss emulation driver for AX.25' when asked during a kernel `make config'.

If you chose to 'make module' then the new scc.o will have been installed in the appropriate /lib/modules directory and you do not need to recompile your kernel. Remember to use the insmod command to load the module before your try and configure it.

7.1.7.2. Configuring the driver for your card.

The z8530 SCC driver has been designed to be as flexible as possible so as to support as many different types of cards as possible. With this flexibility has come some cost in configuration.

There is more comprehensive documentation in the package and you should read this if you have any problems. You should particularly look at doc/scc_eng.doc or doc/scc_ger.doc for more detailed information. I've paraphrased the important details, but as a result there is a lot of lower level detail that I have not included.

The main configuration file is read by the sccinit program and is called /etc/z8530drv.conf. This file is broken into two main stages: Configuration of the hardware parameters and channel configuration. After you have configured this file you need only add:

```
# sccinit
```

into the rc file that configures your network and the driver will be initialised according to the contents of the configuration file. You must do this before you attempt to use the driver.

7.1.7.2.1. Configuration of the hardware parameters.

The first section is broken into stanzas, each stanza representing an 8530 chip. Each stanza is a list of keywords with arguments. You may specify up to four SCC chips in this file by default. The #define MAXSCC 4 in scc.c can be increased if you require support for more.

The allowable keywords and arguments are:

chip
the chip keyword is used to separate stanzas. It will take anything as an argument. The arguments are not used.

data_a
this keyword is used to specify the address of the data port for the z8530 channel `A'. The argument is a hexadecimal number e.g. 0x300

ctrl_a
this keyword is used to specify the address of the control port for the z8530 channel `A'. The arguments is a hexadecimal number e.g. 0x304

data_b
this keyword is used to specify the address of the data port for the z8530 channel `B'. The argument is a hexadecimal number e.g. 0x301

ctrl_b
this keyword is used to specify the address of the control port for the z8530 channel `B'. The arguments is a hexadecimal number e.g. 0x305

irq
this keyword is used to specify the IRQ used by the 8530 SCC described in this stanza. The argument is an integer e.g. 5

pclock
this keyword is used to specify the frequency of the clock at the PCLK pin of the 8530. The argument is an integer frequency in Hz which defaults to 4915200 if the keyword is not supplied.

board
the type of board supporting this 8530 SCC. The argument is a character string. The allowed values are:

PA0HZP
the PA0HZP SCC Card

EAGLE
the Eagle card

PC100
the DRSI PC100 SCC card

PRIMUS
the PRIMUS-PC (DG9BL) card

BAYCOM
BayCom (U)SCC card

escc
this keyword is optional and is used to enable support for the

```
Extended SCC chips (ESCC) such as the 8580, 85180, or the 85280.
The argument is a character string with allowed values of `yes'
or `no'. The default is `no'.

vector
this keyword is optional and specifies the address of the vector
latch (also known as "intack port") for PA0HZP cards. There can
be only one vector latch for all chips. The default is 0.

special
this keyword is optional and specifies the address of the
special function register on several cards. The default is 0.

option
this keyword is optional and defaults to 0.

Some example configurations for the more popular cards are as follows:

BayCom USCC

chip 1
data_a 0x300
ctrl_a 0x304
data_b 0x301
ctrl_b 0x305
irq 5
board BAYCOM
#
# SCC chip 2
#
chip 2
data_a 0x302
ctrl_a 0x306
data_b 0x303
ctrl_b 0x307
board BAYCOM

PA0HZP SCC card

chip 1
data_a 0x153
data_b 0x151
ctrl_a 0x152
ctrl_b 0x150
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no
#
#
#
chip 2
```

```
data_a 0x157
data_b 0x155
ctrl_a 0x156
ctrl_b 0x154
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no

DRSI SCC card

chip 1
data_a 0x303
data_b 0x301
ctrl_a 0x302
ctrl_b 0x300
irq 7
pclock 4915200
board DRSI
escc no
```

If you already have a working configuration for your card under NOS, then you can use the gencfg command to convert the PE1CHL NOS driver commands into a form suitable for use in the z8530 driver configuration file.

To use gencfg you simply invoke it with the same parameters as you used for the PE1CHL driver in NET/NOS. For example:

```
# gencfg 2 0x150 4 2 0 1 0x168 9 4915200
```

will generate a skeleton configuration for the OptoSCC card.

7.1.7.3. Channel Configuration

The Channel Configuration section is where you specify all of the other parameters associated with the port you are configuring. Again this section is broken into stanzas. One stanza represents one logical port, and therefore there would be two of these for each one of the hardware parameters stanzas as each 8530 SCC supports two ports.

These keywords and arguments are also written to the /etc/z8530drv.conf file and must appear after the hardware parameters section.

Sequence is very important in this section, but if you stick with the suggested sequence it should work ok. The keywords and arguments are:

device
this keyword must be the first line of a port definition and specifies the name of the special device file that the rest of the configuration applies to. e.g. /dev/scc0

speed
this keyword specifies the speed in bits per second of the
interface. The argument is an integer: e.g. 1200

clock
this keyword specifies where the clock for the data will be
sourced. Allowable values are:

dpll
normal halfduplex operation

external
MODEM supplies its own Rx/Tx clock

divider
use fullduplex divider if installed.

mode
this keyword specifies the data coding to be used. Allowable
arguments are: nrzi or nrz

rxbuffers
this keyword specifies the number of receive buffers to allocate
memory for. The argument is an integer, e.g. 8.

txbuffers
this keyword specifies the number of transmit buffers to
allocate memory for. The argument is an integer, e.g. 8.

bufsize
this keyword specifies the size of the receive and transmit
buffers. The arguments is in bytes and represents the total
length of the frame, so it must also take into account the AX.25
headers and not just the length of the data field. This keyword
is optional and default to 384

txdelay
the KISS transmit delay value, the argument is an integer in mS.

persist
the KISS persist value, the argument is an integer.

slot
the KISS slot time value, the argument is an integer in mS.

tail
the KISS transmit tail value, the argument is an integer in mS.

fulldup
the KISS full duplex flag, the argument is an integer. 1==Full
Duplex, 0==Half Duplex.

wait
the KISS wait value, the argument is an integer in mS.

min
the KISS min value, the argument is an integer in S.

maxkey
the KISS maximum keyup time, the argument is an integer in S.

idle
the KISS idle timer value, the argument is an integer in S.

maxdef
the KISS maxdef value, the argument is an integer.

group
the KISS group value, the argument is an integer.

txoff
the KISS txoff value, the argument is an integer in mS.

softdcd
the KISS softdcd value, the argument is an integer.

slip
the KISS slip flag, the argument is an integer.

7.1.7.4. Using the driver.

To use the driver you simply treat the /dev/scc* devices just as you would a serial tty device with a KISS TNC connected to it. For example, to configure Linux Kernel networking to use your SCC card you could use something like:

kissattach -s 4800 /dev/scc0 VK2KTJ

You can also use NOS to attach to it in precisely the same way. From JNOS for example you would use something like:

attach asy scc0 0 ax25 scc0 256 256 4800

7.1.7.5. The sccstat and sccparam tools.

- --- BEGIN Linux HAM HOWTO part 2/2 ---

Status
Production release

Updated
01 Apr 97

System requirements
Works on many Unix-like systems, including Linux. On linux it
works with or without X11 or a Soundcard.

Detail
bip offers a very wide range of options that make it very
suitable as a code practice program. It can send text from text
file or random character groups but it has a range of other
features. Some of these are
```

- Morse compliant with ARRL specification
- adjustable volume and tone
- adjustable speed, including Farenheit method
- Jitter feature to simulate hand sent morse

```
Where and How to obtain it.
Not available online, but anyone can write to
Marcin.Skubiszewski@inria.fr for a copy of the source code.

Licensing/Copyright
Shareware $10.

Contributed by
Marcin Skubiszewski, Marcin.Skubiszewski@inria.fr.

6.3. cw2hex
```

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
cw2hex converts ascii text into Hex files for making keyer
EPROMS.
Status
version 1.1 is tested and ready to go.

Updated
01 Apr 97

System requirements
standalone textual program, requires gcc to compile

Detail
This program takes a textual input and converts it to morse
encoded characters in the form of a standard Intel HEX file. The
Hex file can be used to program an EPROM which can then be
connected to a simple circuit that generates canned messages.
Possible uses are CW calling machines and CW beacon transmitter
keyers. There is an accompanying schematic for a keyer circuit
that works with this software.

Where and How to obtain it.
You can obtain cw2hex from www.atd.ucar.edu
<http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

Contributed by:
G. Forrest Cook, WB0RIO

6.4. SoundCard CW

Author
Steve Merrifield, VK3ESM, sjm@ee.latrobe.edu.au

Description
Morse Code practice for Linux, using a soundcard

Status
Completed

Updated
01 Apr 97

System requirements
Linux supported soundcard with FM support.

Detail
This program generates morse code characters using the
soundcard. It does not rely on the Linux virtual console sound
features and may therefore be used either with X11 or from a
virtual console. Its features include:

- adjustable frequency
- adjustable volume
- adjustable speed
- adjustable delay
- adjustable group count
- generation of random groups
- able to decode and play text files

Where and How to obtain it.
The software may be obtained from its home site at:
livewire.ee.latrobe.edu.au
<http://livewire.ee.latrobe.edu.au/~sjm/morse>.

Copyright/Licensing
Berkeley style copyright. The software may be freely used so
long as credit is given to the original author.

Contributed by:
Steve Merrifield, VK3ESM

6.5. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, alan@lxorguk.ukuu.org.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.

Updated
01 Apr 97

System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat,
and allows you to play morse at a range of speeds and
frequencies through the PC internal speaker. You can specify the
text to be played either from the command line, from a file, or
the program is capable of generating random character groups. As
it stands you must invoke the program from a Linux Virtual
Console, as it relies on certain kernel calls to produce the
sound, and these don't work as easily from an XTerm. As it
sounds each character it lists the character in verbal form (Di,
Dit, Dah etc.) to the screen. Alan is hoping that someone will
take the code and enhance it with the features he has listed in
the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.z>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.6. morse (aka superiormorse)

Author
Joe Dellinger, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.
Status
Quite stable

Updated
01 Apr 97

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse.tar.gz can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/>.

Licensing/Copyright
Freely Redistributable

Contributed by:
Brian Suggs, AC6GV, and John Gotts

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio related things. Antenna, Circuit Board, Filter, and QSL card design packages are all good candidates for this section.

11.1. oscope - Enhanced Software Oscillosope

Author
Tim Witham, twitham@pcocd2.intel.com

Description
`oscope' is a digital 44kHz oscilloscope for /dev/dsp. It is based on Jeff Tranter's original work described below but has been significantly enhanced.

Status
First production release.
Updated
01 Apr 97

System requirements
Requires a kernel supported sound card that can do 8800Hz - 44kHz, the `libsx' package to build the xoscope X11 client, the `svgalib' package to build console-based oscope, the `g3vga' package to add console text, and a mixing program to select input source and level.

Detail
Includes oscope for SVGA console display and xoscope, an X11 client. Features include 8-bit sampling of 2 channels at 44kHz, 5 us/div to 5 ms/div time scale, 5 automatic measurements, built-in and external math functions including sum, diff, avg, and FFT, 26 memory buffers, 8 simultaneous signal displays, and file save/load.

Where and How to obtain it.
The oscope package may be obtained from either www.bobsplace.com <http://www.bobsplace.com/~twitham/> or sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>.

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

Contributed by:
Tim Witham

11.2. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It graphically displays voltage as a function of time.

Status
ALPHA. First release.

Updated
01 Apr 97

System requirements
Sound card with input capability supported by the kernel sound driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the soundcard and displays it on the screen in a manner similar to an oscilloscope. Jeff claims Scope was written more for amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope in the scope package from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

11.3. Printed Circuit Board design tool.

Author
Thomas Nau, Thomas.Nau@rz.uni-ulm.de

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.4.1, stable.

Updated
01 Apr 97

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile and install the software. I compiled it without error under X11R6. It comes with package layouts for a range of popular components and the example layout nicely demonstrates the capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: ftp.uni-ulm.de <ftp://ftp.uni-ulm.de/pub/pcb/current> or from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>

Licensing/Copyright
GNU Public License

11.4. Chipmunk circuit design and simulation tool

Author
Dave Gillespie daveg@synaptics.com and John Lazzaro
lazzaro@cs.berkeley.edu

Description
Schematic Entry and Digital or Analog Simulation tool suite.

Status
vers 5.10, stable.

Updated
01 Apr 97

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256 color) only

Detail
I haven't tried this one out yet. It is a suite of tools for circuit design and simulation.

Where and How to obtain it.
You can obtain the Chipmunk package from its home site at www.pcmp.caltech.edu <http://www.pcmp.caltech.edu/chipmunk/>.

Licensing/Copyright
Modified GNU Public License, Caltech specifically disclaimed from liability.

11.5. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

Updated
01 Apr 97

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two simulation modes, either switch where each transistor is modelled as a voltage controlled switch, or linear where each transistor is modelled as a resistor in series with a voltage controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain the irsim package from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>.

Licensing/Copyright
Freely Redistributable

11.6. Spice vers. 3f4

Author
University of California, Berkeley, port by
Jeff@RyeHam.EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

Updated
01 Apr 97

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer
modelled environment to see how they will behave without having
to touch a soldering iron, or solder. A readme file comes with
the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of the spice package from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>

Licensing/Copyright
Copyright held by University California, Berkeley. Freely
redistributable provided you are not unfriendly to the U.S.

11.7. svgafft - Spectrum analyser

Author
Andrew Veliath, veliaa@rpi.edu

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha, but usable.

Updated
01 Apr 97

System requirements
F77, Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit and 8-bit sample resolution on supported Linux soundcards. It's display is something akin to a high-end spectrum analyzer with falling peaks. Andrew is working on an X-Motif version to be released soon.

Where and How to obtain it:
You can find the svgafft package at tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/ALPHA/svgafft/> and sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/>.

Licensing/Copyright
GNU Public License.

Contributed by:
Andrew Veliath

11.8. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

Updated
01 Apr 97

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio, performs a fast fourier transform on the data and displays the output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/> or by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

11.9. ObjectProDSP

Author
Paul Budnik, Mountain Math Software, support@mtnmath.com

Description
ObjectProDSP is an object oriented tool for design, development and implementation of Digital Signal Processing. It allows you to design your DSP network, runs simulations with oscilloscope style plots and listings at any point in the network.

Status
Alpha version 0.2.

Updated
01 Apr 97

System requirements
XFree86 3.1.1 or better, g++ from gcc 2.6.3 or better, 32Mb of total memory (real+swap) recommended, 6Mb of disk space for minimum configuration, 40Mb disk for full installation.

Detail
There are a number of files that comprise the package. There is a binary only package for Linux which I recommend you start with. There is comprehensive documentation included from which you can obtain installation and operation instructions.

Where and How to obtain it.
You can obtain ObjectProDSP from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/devel/opd>, tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/packages/dsp>, or ftp.funet.fi <ftp://ftp.funet.fi/pub/Linux/util/electronics/opd>. There are a number of files that comprise the package, some of the quite large so be prepared.

Licensing/Copyright
GNU Public License vers 2.0., Commercial licensing available.

11.10. bpf - bandpass filter calculator

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
bpf assists in the design of two pole bandpass filters.

Status
Stable.
Updated
01 Apr 97

System requirements
standalone textual program, requires gcc to compile

Detail
bpf is a simple text interface program that offers you a menu of

options of different ways of inputting design data. After you've entered the data it presents a text based circuit diagram and a list of the appropriate component values. It sounds simple, and it is, but it's also quite cute, and bound to be useful.

Where and How to obtain it.
You can obtain bpf.tar.Z from www.atd.ucar.edu <http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse Code tutorials, technical examination database, Computer Based Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. twclock - World Time Clock for Hams

Author
Ted Williams, ted@bluestone.com

Description
A world clock designed for ham radio operators

Status
Version 1.0, stable.

Updated
01 Apr 97

System requirements
Motif libraries if you want to recompile it. Just X11 if you want to run the precompiled binaries.

Detail
Anyone who needs the time of day someplace else in the world, or anyone tired of the same old look of their clock will find this software of interest. It is implemented with Motif widgets, and will displays the current time in major cities around the world.

Where and How to obtain it.
You can obtain the twclock package from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright
GNU GPL

13.2. Chirp - Contest Logger

Author
Kenneth E. Harker, N1PVB, kharker@cs.utexas.edu

Description
Contest logging program

Status
Active development

Updated
01 Apr 97

System requirements
Requires ncurses library and header files to compile.

Detail
A linux based contest logging program. Kenneth is writing it so he can use it on his laptop while working VHF contests. He is also writing it as an excuse to learn ncurses programming. His goal is a general purpose contest logger that a user can specify new contests in as they come about. It supports all bands and modes.

Where and How to obtain it.
When version 1.0 is available, you should be able to find it from the Chirp Home Page
<http://www.cs.utexas.edu/users/kharker/chirp/>

Licensing/Copyright
Probably GNU GPL.

Contributed by
Kenneth E. Harker, N1PVB, kharker@cs.utexas.edu

13.3. Contest - Contest Logging Program

Author
Carsten Wilderotter, carsten.wilderotter@student.uni-ulm.de

Description
A logfile program for Contest operation

Status
Version 0.0.1, Alpha

Updated
01 Apr 97

System requirements
No special requirements.

Detail
Linux contest logging program.

Where and How to obtain it.
You can obtain the contest package from: sunsite.unc.edu

<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright
GNU GPL

13.4. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for Amateur Radio operators.

Status
Not yet available.

Updated
01 Apr 97

System requirements.
Linux compatible hardware, some software will obviously require specialised hardware to operate. No additional software should be required.

Detail
A complete Linux distribution specifically catering for Amateur Radio operators. It will include a fully featured Linux installationplus a range of amateur radio specific software such as those listed in this document. Bruce has detail and updated status report available at the LinuxForHams WWW page <http://www.rahul.net/perens/LinuxForHams>. Bruce has been extremely busy with the Debian project and this has reduced his available time to just about zero. He does still intend to pursue this. Why don't you help out by maintaining one of the software packages as Debian packages ? More information from the Debian Web Site <http://www.debian.org/>.

Where and how to obtain it:
It isn't yet available, details will be made available when it is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens

13.5. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are

exposed by sunlight and what parts aren't.

Status
Released.

Updated
01 Apr 97

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

Licensing/Copyright
Public Domain and may be freely copied as long as the notices at the top of sunclock.c remain intact.

13.6. Xearth

Author
Kirk Johnson, tuna@cag.lcs.mit.edu

Description
A rotating earth for X-windows root window. It has real life shading, and options for geostatic view, and non geostatic view. A prettier and more modern version of sunclock but requires a bit more processing power.

Status
Version 1.0.

Updated
01 Apr 97

System requirements.
X-Windows.

Detail
xearth is a sophisticated program which draws a colour picture

of the earth onto your X Windows display. It offers either an orthographic view as you would see from space or the map like mercator projection. You have a number of options in determining the behaviour of the view. The details are available from the xearth Home Page
<ttp://www.cs.colorado.edu/~tuna/xearth/index.html> and in the documentation which is supplied with the package.

Where and How to obtain it.
The source can be obtained from its home site at cag.lcs.mit.edu <ftp://cag.lcs.mit.edu/pub/tuna> or just about any X11/contrib directory.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The copyright notice included states that xearth is freely redistributable so long as the copyright notice is left intact, and be included in documentation.

Contributed by:
Kirk Johnson

14. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible. So I'm keen to hear about any developments or products that I don't already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing? Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-Windows? Does it need a soundcard? Does it need a certain version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece of software as this would consume a lot of time reading and trying to keep up to date. So instead what I'd like to list is

what makes this software unique, anything special about it.
Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would
be great. If it is commercial software then the name of the
company distributing the software, and an address or telephone
number. If it is available only by some other means, say mail
order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain?
Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what
you do know and I'll list what I can. I'd rather have an incomplete
listing than no listing at all.

Please mail any contributions to:

terry@perf.no.itg.telstra.com.au

I'd list a packet radio address too but I'm still not properly
operational again yet after moving house.

15. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and
Linux take place. They take place in the comp.os.linux.* newsgroups,
they also take place on the linux-hams list on vger.rutgers.edu.
Other places where they are held include the tcp-group mailing list at
ucsd.edu (the home of amateur radio tcp/ip discussions).
To join the Linux linux-hams mail list, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion
of the use of advanced protocols, of which tcp/ip is one, in Amateur
Radio. Linux specific questions should not ordinarily go there.

16. Copyright.

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telstra.com.au
v2.3, 1 April 1997

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but has been
moved into the Linux Documentation Project HOWTO collection, so it has
been renamed the HAM-HOWTO. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
Added entry based last updated field.
bpf - filter calculator
BayBox - Packet BBS
digiinfo - digipeater information database
Contest logging program
Chirp contest logger
bip
```

pileup
twclock
DX Cluster watcher
F6FBB BBS

Corrections/Updates:
Changed all ftp: url's to point to the directory rather than the file.
CLX, and just about everything else.
Updated location of John Gotts mirror.

ToDo:
find a way of automating this, or find an alternate means of
presenting this information.

2. Where to obtain new versions of this document.

The Linux Documentation Project runs a Web Server and this document appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>.

Dennis Boylan N4ZMZ dennis@nanovx.atl.ga.us makes it available at the following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com <http://www.hboc.com/linux/index.html> and www.lan.com <http://www.lan.com/linux/index.html>.

John Gotts N8QDW jgotts@engin.umich.edu makes it available at: www-personal.engin.umich.edu <http://www-personal.engin.umich.edu/~jgotts/linux/HOWTO/HAM/HAM-HOWTO.html>.

Dan Todd dantodd@fusilli.ucdavis.edu makes it available at the following two locations: wheel.dcn.davis.ca <http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF alan@dap.CSIRO.AU makes it available in Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

The Tuebingen Radio Club has it available from their home page at: DARC Home Page <http://www.neckar-alb.de/darc/welcome.html>

Please let me know if you'd like to make it available somewhere too.
I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.91 released.

Updated
01 Apr 97

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite. The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer
directory:
directory list viewer

message:
message preparation application

viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper

Where and How to obtain it.
John's software is available from: ftp.cs.nott.ac.uk <ftp://ftp.cs.nott.ac.uk/jsn/> or ftp.amsat.org <ftp://ftp.amsat.org/amsat/software/Linux/> or ftp.funet.fi

<ftp://ftp.funet.fi/pub/ham/satellite/pacsat/>. The version current at the time of writing was microsat-0.91.tar.gz. Please check for new versions.

Licensing/Copyright
GNU Public License. Freely redistributable, No warranty.

Contributed by:
John Melton, G0ORX/N6LYT, Alan Cox, GW4PTS, Jonathon Naylor, G4KLX

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with X11 color graphics.

Status
Version 4.0 is a fully commercial release. Version 3.1.5 is the last freely available release.

Updated
01 Apr 97

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written in 'C' language on a UNIX workstation. It provides two different live displays, for single or multiple satellites, and two different orbit prediction facilities. Cursor controls used in both live displays are compatible with the VT100 standard, which allows the program to be run basically from any terminal. An optional X Window graphics display shows the typical world map tracking chart. The orbit prediction can be run either interactively or in a batch mode. In the latter case all necessary parameters are specified on the command line. The program uses the NORAD/NASA two-line Keplerian element (TLE) sets directly.

The current version of SatTrack can track a single satellite and/or display multiple satellites for a single ground station. It also can control suitable ground station hardware, like antennas and radio equipment, and has an autotrack mode in which it switches automatically between a number of specified satellites. For calibration purposes tracking of the Sun and the

Moon are also provided. Future releases will provide more options. SatTrack requires about 5MB of disk space in the full distribution with eight different world maps (2 styles, with 4 different sizes each, to fit everyone's screen and taste) and less than 1.5 MB of memory at run time. More information can be obtained from the SatTrack WWW Home Page <http://www.primenet.com/~bester/sattrack.html>.

Where and How to obtain it.
The commerical version of SatTrack can be found at: SatTrack WWW Home Page <http://www.primenet.com/~bester/sattrack.html>.

The free version of SatTrack may be found at: ftp.jvnc.net <ftp://ftp.jvnc.net/priv/kupiec/sattrack/> or ftp.amsat.org <ftp://ftp.amsat.org/amsat/software/Linux/>.

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used without special permission for non-profit, non-commercial use. For commercial applications a license from the author is required. Version 4.0 is a fully commercially supported release.

Contributed by:
Manfred Bester, DL5KR

3.3. Predict

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A satellite orbital prediction program that also tracks the sun's position to predict visible satellite passes.

Status
Complete and working.

Updated
01 Apr 97

System requirements
predict is a screen-oriented program that utilizes the ncurses-1.8.5 (or later) library. A color terminal is a plus, but not a necessity.

Detail
Features of predict include azimuth and elevation headings of satellite passes, orbital phase, sub-satellite point locations, slant ranges, orbit numbers, and sunlight visibility as a function of date and time. The program is simple, fast, and easy to use. Predict maintains an orbital database for 21 satellites that can be updated by the user through the keyboard or by using files containing NASA 2-line orbital element data. Since this program operates under a multiuser environment, each user on the

system owns and maintains his or her own unique orbital data base.

This program has been compiled using the highest level of compiler optimization for high speed execution, and uses an a.out binary format for greatest compatibility.

To install the package use the following:

```
# cd /
# tar xvfz predict.tgz
```

Where and How to obtain it.
You can obtain predict.tgz from: amsat.org <ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.4. UO11

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple UoSAT-OSCAR-11 satellite telemetry decoding program.

Status
Complete and working.

Updated
01 Apr 97

System requirements
A 1200 baud UoSAT-OSCAR-11 FSK demodulator (Bell-202 is suitable), a VHF-FM receiver that can tune to 145.825 MHz, a small yagi antenna, and a communications program such as Minicom that can save 1200 baud ASCII telemetry data to a text file.

Detail
uo11 decodes ASCII telemetry data that has been captured through a terminal program, error checks the received data, and applies calibration equations to the received data to produce a report that can be easily understood and analyzed. uo11 comes pre-compiled (a.out format) with a man page entry for ease of use.

To install you should use the following commands:

```
# cd /
# tar xvfz uo11.tgz
```

Where and How to obtain it.
You can obtain uo11.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.5. Dove

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple DOVE-OSCAR-17 satellite telemetry decoding program.

Status
Complete and working.

Updated
01 Apr 97

System requirements
A terminal node controller (TNC), a VHF-FM receiver that can
tune to 145.825 MHz, a small yagi antenna, and a communications
program such as Minicom that can save 1200 baud ASCII telemetry
data to a text file.

Detail
dove decodes ASCII telemetry data that has been captured through
a terminal program and applies calibration equations to the
received data to produce a report that can be easily understood
and analyzed. dove comes pre-compiled (a.out format) with a man
page entry for ease of use.

To install Dove you should use the following commands:

```
# cd /
# tar xvfz dove.tgz
```

Where and How to obtain it.
You can obtain dove.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.6. Kepgen

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple, yet useful utility that generates Keplerian data files
in the NASA 2-line format from data entered through the
keyboard.

Status
Complete.

Updated
01 Apr 97

System requirements
kepgen is a screen-oriented program that utilizes the
ncurses-1.8.5 (or later) library. A color terminal is a plus,
but not a necessity.

Detail
kepgen allows the user to create checksummed Keplerian data
files in the NASA 2-line format using orbital data entered via
the keyboard. kepgen was created out of the need for generating
2-line orbital files from orbital data copied from WA3NAN audio
transmissions during Space Shuttle missions. The files created
can be read by virtually any satellite tracking or orbital
prediction program. kepgen comes pre-compiled (a.out format)
with a man page entry for ease of use.

To install kepgen you should use the following commands:

cd /
tar xvfz kepgen.tgz

Where and How to obtain it.
You can obtain kepgen.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, KG0CQ, drranu@holly.ColoState.EDU

Description
A simple program to control a Yaesu FT-890 transciever via its CAT port from linux.

Status
Working

Updated
01 Apr 97

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com port to use. Once started the program is menu driven. Future versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by email.

Licensing/Copyright
You may copy this program millions of times, the only restrictions are:

- You may not charge ANYONE for the program itself.
- You may not distribute modified versions of the program.
- If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, KG0CQ

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. F6FBB Packet BBS

Author
Jean-Paul Roubelat, F6FBB, jpr@f6fbb.org

Description
Fully Features Packet Radio BBS system with X11 Windows interface

Status
Version 7.00b45 is Beta.

Updated
01 Apr 97

System Requirements
Kernel based AX.25/NetRom/Rose network configuration. X11 windowing system for the X11 version.

Detail
This is a port of the well known F6FBB Packet Bulletin Board system to Linux. The BBS supports connections from AX.25, NetRom, Rose and TCP/IP and offers all of the features you'd expect from the product. The optional X11 interface provides a nicely presented sysop interface.

A mailing list for F6FBB is available. To subscribe send a mail message to: majordomo@f6fbb.org with the line `subscribe xfbb' in the body of the message. The mailing list is archived at zone.pspt.fi <http://zone.pspt.fi/archive/fbb/>.

Where and how to obtain it
You can obtain the F6FBB package from its home site at: F6FBB Home Page <http://www.f6fbb.org/>.

Licensing/Copyright etc.
The F6FBB software is frelly available for non-commercial use.

5.2. DX Cluster Watcher

Author
Pierluigi Guerzoni, IZ4AKO, iz4ako@ing49.unife.it

Description
Displays DX information passively received from a DX Cluster Node.

Status
Version 4, stable.

Updated
01 Apr 97

System Requirements
Requires Kernel based AX.25 configuration.

Detail
The DX Cluster watchers listens to the DX Cluster traffic on your frequency, captures it and displays it in a coloured text window. It conserves traffic on the frequency by not requiring you to actually connect to the cluster node.

Where and how to obtain it
You can obtain the DX Cluster Watcher from the: DX Cluster Watcher Home Page <http://ing49.unife.it/~iz4ako/project_inglese.html>.

Licensing/Copyright etc.
GNU GPL

Contributed by
Pierluigi Guerzoni, IZ4AKO, iz4ako@ing49.unife.it

5.3. Digiinfo

Author
Ported by Mario Lorenz, DL5MLO, dl5mlo@vdazone.org

Description
A database of packet radio network information.

Status
Version 2.5.1 is stable.
Updated
01 Apr 97

System Requirements
No special requirements.

Detail
digiinfo was a program initially written for the Atari by
Karsten DC7OS. Digiinfo is a database program for displaying
information about the packet radio networks.

Where and how to obtain it
You can obtain the digiinfo package and database from its home
site at: www.vdazone.org
<http://www.vdazone.org/~dl5mlo/digiinfo/>.

Licensing/Copyright etc.
ALAS, Amateur only license

Contributed by
Mario Lorenz, DL5MLO, dl5mlo@vdazone.org

5.4. BayBox BBS

Author
Flori Radlherr, DL8MBT, flori@t-online.de

Description
A Packet Bulleting Board System for Linux.

Status
Version 1.38, stable.

Updated
01 Apr 97

System Requirements
Recommended hardware is 80486/33Mhz with 8MB RAM

Detail
Unfortunately the documentation is in German and I'm unable to
understand most of it. I get the impression though that this is
a BBS that supports all of the usual features on a packet radio

bbs, forwarding etc, but the documentation seems to suggest that the Linux version supports telnet access only. This isn't really a big constraint, as you can easily configure a session under the Linux ax25d program to accept AX.25/NetRom/Rose connections and connect the BBS via telnet.

If you're able to help by giving a better description, I'd appreciate it.

Where and how to obtain it
You can obtain the BayBOX from its home sites at:
members.aol.com <http://members.aol.com/baybox/>

Licensing/Copyright etc.
The BayCom-Mailbox software is intended for usage in amateur radio context only. Any usage outside of the amateur radio AX.25 network, especially commercial usage or distribution is prohibited. Within the scope of this limitation, usage and copying of the BayCom-Mailbox without fee is hereby granted. In any case of usage, the software is provided "as is" and comes with absolutely no warranty, neither implied nor expressed.
Contributed by
Iztok Saje, S52D, s52d@s55tcp.ampr.org

5.5. JNET

Author
Takeshi Shoji, JF2CEX, taka@myk.ilc.or.jp

Description
An enhanced version of KA9Q NOS for Linux and other platforms.

Status
Version 961210, Stable, released.

Updated
01 Apr 97

System Requirements
No special system requirements, requires KISS TNC.

Detail
This another actively maintained derivative of the KA9Q NOS package. This version has been ported to a wide range of alternative platforms and offers some enhancements not available in other NOS derivatives. A small catch is that most of the documentation is in Japanese.

Where and how to obtain it
You can obtain the latest version of JNET from its home site at:
www.myk.ilc.or.jp
<http://www.myk.ilc.or.jp/~taka/software.html#jnetcex>.

Licensing/Copyright etc.
I'm actually not sure. I suspect though that as a NOS derivative
it is freely usable by amateur radio operators.

Contributed by
Isao SEKI, http://www.prug.or.jp/people/jm1wbb

5.6. XNet

Author
Richard R. Parry, W9IF, rparry@qualcomm.com

Description
A traffic analyser for AX.25 networks.

Status
Stable, released.

Updated
01 Apr 97

System Requirements
TCL-7.5/Tk-4.1, KISS TNC.

Detail
The XNet software provides a variety of tools that an AX.25 lan
manager could use to analyze and manage traffic. The tools
present a graphical view of all of the traffic received at the
monitoring node allowing the observer to easily see where the
traffic flows normally and other information such as:
- Packet counts
- Node statistics
- Network Utilisation figures

The network is displayed with icons representing hosts and lines
between them representing the traffic flow. The graphical
display provides an instantly absorbable view of the traffic on
the network being monitored. Richard has more information and
sample displays at: www.qualcomm.com
<http://www.qualcomm.com/~rparry/xnet.html>.

Where and how to obtain it
You can obtain the software from: www.qualcomm.com
<http://www.qualcomm.com/~rparry/xnet/xnet-1.1.tar>

Licensing/Copyright etc.
XNET is a freeware program. It may be freely distributed.

Contributed by
Richard Parry, W9IF

5.7. monax25

Author
Skip Hansen, WB6YMH and Harold Price, NK6K.

Maintained by
Jonathon Naylor, jsn@cs.nott.ac.uk

Description
The monax25 provides a number of utilities for collecting
statistics on AX.25 channel usage.

Status
Version 1.11, Stable

Updated
01 Apr 97

System Requirements
KISS TNC.

Detail
The original ax25mon programs were written for MSDOS. This
package is a port of that software to Linux.

Where and how to obtain it
The `monax25' package may be obtained from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright etc.
Freely copyable, not GPL though.

5.8. splitscreen

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Split screen `ttylink' style program with scroll back and log to
file.

Status
Version 1.4.1, stable.

Updated
01 Apr 97

System Requirements
Requires the `ncurses' package.

Detail
The splitscreen is a unix implementation of the NOS ttylink
command. It provides a splitscreen display that makes user to
user chats much easier than the usual telnet interface. The
scroll back buffer and log to file features are useful when you
use the splitscreen program to access services like convers.

Where and how to obtain it
The `splitscreen' package is available from: sunsite.unc.edu ham applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright etc.
Public Domain

5.9. talk-ax25

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Berkeley `talk' client modified to support Linux AX.25

Status
Version 960426, working.

System Requirements
Requires the `ncurses' package.

Detail
The `talk-ax25' program is a modifed version of the conventional Berkeley `talk' program to support Linux AX.25 operation.

Where and how to obtain it
The `talk-ax25' program is available from: sunsite.unc.edu ham applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or from:
ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright etc.
Berkeley style. Freely distributable, copyright messages must be retained.

5.10. 7Plus for Linux

Author
Axel Bauda, DG1BBQ, DG1BBQ@DB0CL.#HB.DEU.EU

Description
Uuencode-like file coder for BBS Send and Forward of binary files.

System Requirements
none special

Detail
Provides the ability to 7Plus encode binary files to allow them to be transmitted within AX.25 BBS messages.

Where and how to obtain it
The `7pl217sr' encoder package is available from:
sunsite.unc.edu ham applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright etc.
Hamware - Free for use by amateur radio use.

5.11. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is available for both DOS and Linux. It features many enhancements not found in other NOS versions.

Status
Version 2.21. Stable.

Updated
01 Apr 97

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/tnos.html>.

Where and how to obtain it
The current version of TNOS is always available from: ftp.lantz.com <ftp://ftp.lantz.com/tnos/current/unix/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/tnos/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.12. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.
Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the desirable combination.

Updated
01 Apr 97

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a
compatible set of commands with the RLI bbs so users will be
familiar with it immediately. It then extends the command set
to be a very nice natural language style interface (e.g "list at
allus about KPC-3"). Many csh style bang commands are supported.
Also included is a mail interface to provide a packet to
internet gateway.

Currently you need to customize the source code for your
installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to
rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com.
This code is not packaged for distribution yet since it is not
past the alpha stage of development.

A version of the software is available from ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/packet/n0ary/>

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.

Contributed by:
Bob Proulx, KF0UW

5.13. LBBS - Linux BBS message gateway

Author
Daryl L Miles, G7LED, dlm@frink.demon.co.uk

Description
A BBS package designed to operate with either the native AX.25
kernel code or with the Wampes package.

Status
In development, working.

Updated
01 Apr 97

System requirements
Kernel AX.25 support or the Wampes package. sendmail, CNEWS.

Detail
Daryl's aim was to build a platform on which amateurs could
build a Packet BBS to smtp gateway for Linux. I'm not sure what
the current status is as the last version I could find was dated

30 Jun 1995. The latest binary version supports:
• MBL, FBB batching, FBB compressed, FBB type 1 compressed forwarding with restart facility implemented, deferring, and rejection.

• various Linux transport mechanisms including TCP kernel, AX.25 kernel, Wampes NetROM, AX25 or TCP.

• Simple dialer, to allow connections through AX.25 or NetROM nodes.

• White Pages

• Transient handling of type A (ACK messages).

• SMTP/NNTP<>BBS gatewaying implemented heavily to the extent that the user front end will be accessing the NetNews spool to retrieve articles.

• Message filter mechanism

• Field swapping (like SWAPP.SYS in FBB).

• Multiuser/connect.

To install, I did the following:

```
# cd /usr/src
# mkdir LBBS
# tar xvfz LBBS-0.1.6A.tar.gz
# cd LBBS
# ./Install.sh
```

This created a /usr/lbbs directory. The README.Setup file suggest an order in which to configure the BBS.

Where and How to obtain it.
You can obtain the `LBBS' package from: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright
Freely distributable for any non-commercial Amateur Radio use only. No warranty. Will be changed to GPL when software is stable.

5.14. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

Updated
01 Apr 97

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.15. CLX Packet DX Cluster Program

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Current version 2.07

Updated
01 Apr 97

System Requirements
Linux Kernel version 2.0 or greater, TCP/IP networking, SysV IPC. Also requires Perl and optionally Expect.

Detail
PacketCluster nodes have been available for about seven years. The original software was written by Dick Newell, AK1A, and is running under DOS. CLX is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical. Remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and CLX. So it fits well into an established network of PacketCluster nodes.

CLX is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of PacketCluster nodes with some experience on both PacketCluster and Linux will find this application interesting.

Here are some of the features of CLX:

• It is fully compatible with the internal PCxx protocol and from a users point of view. It allows multitasking and different priorities.

• The software detects looping DX spots without generating endless messages. CLX filters out such duplicate information. We have implemented a concept which allows us to connect the network at multiple points, which would formerly have been called a "Cluster Loop". CLX knows of so-called "active" and "passive" links. The outcome is that more DX information is seen by CLX users.
• An interface for extending CLX with your own programs and applications.

• Extended connectivity through the use of connect scripts. CLX now can build up and maintain virtually any connection using TCP/IP, UUCP or any other communication programs.

• CLX uses modern programming concepts like shared memory for common data, lex and yacc to implement command language, shared libraries to keep binaries small, remote procedure calls for interprocess communication. It is strictly modularized with its own dedicated process for every major task.

• Comprises of several modules running as separate processes.

Where and How to obtain it
You can obtain the software from ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

00Index
clx_206.tgz
clx.txt
README

Licensing/Copyright
CLX (c) by Franta Bendl (DJ0ZY) and is available for non-commercial use, but the authors want to keep track of who is using their product, so before you can actually use the software you have to ask for an encrypted callsign string to be placed in the configuration file. You must send mail to clx_us@dl6rai.muc.de to organise this.

Contributed by
Bernhard ("Ben") Buettner, DL6RAI

5.16. DPTNT Terminal and DPBOX BBS package.

Author
Mark Wahl, DL4YBG, DL4YBG@DB0GR.#BLN.DEU.EU,

wahlm@berlin.snafu.de and Joachim Schurig, DL8HBS,
DL8HBS@DB0GR.#BLN.DEU.EU, h0187akk@rz.hu-berlin.de

Description
A suite of programs that provide BBS and Terminal programs for
Linux.

Status
Stable and working.

Updated
01 Apr 97

System requirements
TNC supporting WA8DED hostmode or KISS protocols.

Detail
TNT is a full featured hostmode terminal program. Compiling it
on Linux is as difficult as untarring the source and typing
`make'. It provides both a `dumb' terminal and X11 version. It
comes with some comprehensive documentation which describes its
features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual
screens that you can switch between. Each session window
provides split screen (seperate transmit and receive text)
operation with a status line. Commands can be entered in
either a command session, or in any terminal session using a
command key. Each of the virtual screens can be larger than
the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text
to files. You can log transmit, receive or both to a log
file. You can overwrite or append received data to existing
files. You can use the `autobin' protocol to transmit or
receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can
access other programs on your computer. You can also run a
program and direct its input/output to a channel so that
users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a
device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do

so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an ethernet and you want other terminal on the net to have use of your radio.

New versions will support the Linux kernel AX.25 code.

DPBOX is a full featured BBS supporting the following features:

- F6FBB, W0RLI, TheBox style forwarding protocols.
- 8-bit transparent handling of messages using AutoBIN protocol.
- BBS data compressed to save space on disk, forwarding and downloading.
- "Live message capture" off BBS frequency, saves network traffic.
- PACSAT style bulletin broadcast transmitter and receiver.
- up to 200 simultaneous users.

Where and How to obtain it.
The `dptnt' package may be found at: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/dptnt/>, or ftp.tapr.org <ftp://ftp.tapr.org/pub/tapr/software_lib/Linux/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/>.

The Home Pages of the developers are at: DL4YBG <http://www.snafu.de/~wahlm/> and DL8HBS <http://hppool0.rz.hu-berlin.de/~h0187akk/>

Licensing/Copyright
The TNT and DPBOXT programs are covered by the GNU Public License. The TFKISS program is covered by ALAS (a german license for Amateur Radio use), and the DPBOX program is freely distributable for Amateur Radio use.

5.17. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA (port to BSD), then Ron Atkinson N8FOW and John Paul Morrison (port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an

IPIP encapsulating gateway. Note, this probably isn't necessary any more in most installations because recent kernel support a kernel device to perform encapsulation.

Status
Ron is running this code himself, and the other version have been run quite successfully.

Updated
01 Apr 97

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet radio you have probably been connected by an encapsulation gateway of some descpription. Most run KA9Q's NOS and DOS, but others run Unix and this daemon. It allows you to encapsulate IP within IP, so that you can 'tunnel' IP connections over the Internet. The software allows you to connect a KISS TNC to your linux machine and to have all datagrams received on it carried across the Internet to a similar gateway. Bdale has installation instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com <ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code and like it you might send him a QSL card or a postcard.

Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

Note:
You may want to consider using kernel based tunnel daemon now instead.

5.18. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an AXIP encapsulating gateway.

Status
Not properly tested, but assumed to work ok.

Updated
01 Apr 97

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It allows you to encapsulate AX.25 frames in IP to carry them across the Internet. This is useful for linking AX.25 networks in remote areas. Ron has supplied a Makefile for linux, and with it the software compiled without errors on my system running a recent version kernel. Ron has also written some README files which give you the detail necessary to compile the system and the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>. An enhanced version of this software is included in recent versions of the Linux AX.25 utilities. Refer to the AX25-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/AX25-HOWTO.html> for more information.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is not removed.

Contributed by:
Ron Atkinson, N8FOW

5.19. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, dc6iq@insu1.etec.uni-karlsruhe.de, and Brian Lantz brian@lantz.com.

Description
This is a version of the convers server that allows multiple users to simultaneously chat with each other in a round-table style conversation. It is compatible with the NOS convers servers, but provides extra facilities such as saving/restoring of Personal Text and Chanel Topics. Brian Lantz has further enhanced the software with additional features.

Status
In use of a number of popular convers servers, appears very stable.

Updated
01 Apr 97

System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL
file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available at sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers/>. The home of
the software is at insu1.etec.uni-karlsruhe.de ftp server
<ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated),
but some portions appear to be free for non-commercial use and
copying provided the copyright notices stay intact.

5.20. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz csmall@triode.apana.org.au

Description
An implementation of the Radio Shortest path First routing
protocol for linux. The daemon supports version 2.2 of the
protocol which corrects a lot of bugs and problems that were
present in version 2.1.

Status
Alpha - running, needs testing and bug reports. Current version
is 0.08

Updated
01 Apr 97

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It
addresses some of the quirks of RSPF v2.1, the version in NOS
which means that it is incompatible with the NOS version. It
will also allows remote/local queries via a tcp session for
debugging and diagnostic purposes.

Where and How to obtain it.
Current versions are always available from sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or ftp.ucsd.edu

<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming> or from the
author.

Licensing/Copyright
GNU Public License vers 2.0

Contributed by:
Craig Small, VK2XLZ

5.21. Michael Westfall's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Michael Westfall, N6KUY, mwestfal@.csci.csusb.edu

Description
A split screen terminal program that listens on the ttylink port
and accepts incoming connection requests.

Status
Seems to work fine.

Updated
01 Apr 97

System requirements
none special.

Detail
This is a standalone program that does require you to change the
configuration of your system at all. If you have root access on
your machine then you run the program in a VT or in an XTerm and
it will clear the screen and wait for an incoming connection on
port 87 (ttylink). When a connection is received it will provide
you with a split screen display with which to communicate with
the calling person.

Where and How to obtain it.
You can obtain ttylinkd from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ttylinkd.tgz> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/ttylinkd.tgz>.

Licensing/Copyright
Unknown, presumed freely distributable.

5.22. Craig Small's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Craig Small, VK2XLZ, csmall@triode.apana.org.au

Description
A daemon to accept a ttylink (port 87) tcp/ip connection and convert it into a talk request for a user on the host machine. This may also be configured for use with the ax25d program so that AX.25 users may also make use of it to connect to you.

Status
Alpha, but working.

Updated
01 Apr 97

System requirements.
Kernel networking support with AX.25 support if desired.

Detail
Because the talk protocol is a non-standard, that is it isn't actually defined anywhere (except the source), the ttylink protocol from NOS has become the defacto standard, at least for amateurs, to provide keyboard to keyboard communication over tcp/ip. This daemon fills the need for something to answer ttylink requests to linux machines.

Where and How to obtain it.
You can obtain the latest version of ttylinkd from:
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming>.

An slightly enhanced version of this software is now included in the Linux AX25 utilities package.

Licensing/Copyright
GNU Public License vers 2.0

6. Morse Code

Software for use in conjunction with, or for facilitating Morse communication.

6.1. Pileup

Author
Richard Everitt G4ZFE richard@babbage.demon.co.uk. Based on sccw by Steve Merrifield.

Description
CW pileup training program

Status
v1.0. Stable but extra development planned.

Updated
01 Apr 97

System requirements
Linux supported sound card

Detail
CW pileup trainer (similar to PED) based on sccw. Up to 9
stations calling at once with variable CW speed and tone/volume
to simulate a pileup. Callsigns are taken from the 1996 CQ WW
CW contest entry of M6A to add some realism.

I fed /usr/dict/words to the program and it was quite a chuckle.
So even if you aren't into Morse it is worth trying out just for
the giggle.

Where and How to obtain it.
You can obtain the pileup package from its home site at: Pileup
Home Page <http://www.babbage.demon.co.uk/pileup.html> or
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright
GNU GPL

Contributed by
Richard Everitt G4ZFE richard@babbage.demon.co.uk.

6.2. bip

Author
Marcin Skubiszewski, Marcin.Skubiszewski@inria.fr. 24 rue de
l'Oasis, 92800 Puteaux, France

Description
A program to learn Morse code (for various Unix-like platforms)

From: cjs9@cornell.edu
Message-ID: <5s72bh$dll@newsstand.cit.cornell.edu>
Source record: 192444

OK I know that this has been dis(cussed) here before, but I would like an opinion of what should you do when the other party does not send me a QSL card back? If they do not request a SASE during the QSO how do I know. (I am not a mindreader , although my YL thinks I should be) so I don't know that he / she wants one. When I do ask about 95% say they do not want one and will send me one when they get mine. Which is only fair in my humble opinion.

So I send the card and , nothing. Should I send another card (assuming that I really want that state or grid square) with a SASE, track them down if they have E-mail and ask what gives or what?

Please feel free to E-mail me your feelings if you don't want them posted here in this forum. cjs9@cornell.edu. If I have sent some of you a QSL card and you haven't resopnded, please do, I would like your card. Thanks.

Surely you jest. I have a 25 year old stereo system, a 15 year old
scanner, a 10 year old HF receiver, a 5 year old computer chess board,
and other items, all in daily use since they were brought home, and none
have given me problems. Even if there were problems, you'd have to focus
the blame on the manufacturer, not the seller.

Oh, include two CB radios (one converted to 10m CW, the other in use on
my sailboat to talk to the fishing fleet to see what fish are running
and where...).

It must be that gentleman in his 50's - 60's that I saw on TV that was spraying people with this vile compound. He had a compressor and a large canister of sun tan lotion (probably full of titanium dioxide) and a paint spray gun, For .50 or $1.00 he would spray the lovely little beach bunnies and then *RUB* it in .... Talk about liking your job ;)

2310. SMA Antennas for VX-1R

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-06 00:00:00 UTC
From: mbgrant@ibm.net
Message-ID: <33e8dff1.91297937@news-s01.ny.us.ibm.net>
Source record: 192306
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.antenna

OK gang. I've heard a lot of talk about how the VX-1R stock antenna sucks pond water. (It's not too bad, but I have nothing to compare it with). I've also heard recommendations that the Antenna from the Standard 508 works well and is $25.

I've checked the AES catalog on-line, and have come up with the following SMA antennas by Comet and Diamond:

CMT SMA3 COMET 2M/440 9.75" SMA ANTENNA 39.95
CMT SMA501 COMET 2M/440/900 1.5" SMA ANT 29.95
CMT SMA503 COMET 2M/440 8.75" SMA ANTENNA 33.95

DIA SRH519 DIAMOND 2M/440 8.3"FLX SMA WHP 34.95
DIA SRH805 DIAMOND 2M/440/1.2 1.75"SMA AN 29.95
DIA SRH815 DIAMOND 2M/440/1.2 6" FLEX SMA 44.95

So my questions is:
How do the Comet and Diamond mini-whips (the 1.5" and 1.75") stackup?
Also, has anyone tried the SR815, it looks to be the best of the bunch, only 6" and covers 2-440 and 1.2, which will probably give good 800 Mhz coverage as well.

Thanks, as always, in advance.

Cross-posted to: rec.radio.amateur.misc,re.radio.amateur,rec.radio.amateur.equipment

You need a signal generator, distortion analyzer (or SINAD-der), a three port capacitive isolating coupler "T" , 20dB fixed attenuator, and 50 ohm load.

Install the capacitive coupler between the 50 Ohm load and Receiver Under Test (RUT) such that the 50 Ohm Load and the RUT are connected through the lossless branch of the "T". Next insert a modulated signal through the 20 dB attenuator to the capacitive branch of the "Iso T". Adjust the modulation to 60% of rated system deviation. Usually +/-3KHz for LMR FM. Adjust the signal generator to a high output to fully saturate the receiver. Apply the receiver output (deemphasized discriminator or speaker) to the distortion analyser and adjust for full scale (0dB) on the distortion analyzer with the filter disabled. Engage the filter, the distortion analyser and adjust the filter for a null , it should read a very low distortion and should be about -30db or greater down from 0. Now reduce the signal generator until the needle rises to -12dB. You have now calibrated the setup for 12dB SINAD.

Note the value of RF signal output from the RF generator in decibels.

Remove the 50 Ohm load and substitute an antenna placed in the normal vicinity of the noise source. Turn on the noise source and adjust the signal generator output (should need to be increased) until 12 dB SINAD is again attained.

Note the value of RF signal output from the RF generator in decibels.

Calculate the difference and therefore the increased signal in decibels required to attain 12dB SINAD in the presence of noise. That value is the desense. The receiver will need that very amount of additional signal to receive reliably when the noise source is present.

You will probably want to put the computer in various operating modes to determine the worst case scenario. This test will permit you to experiment with sheilding and antenna configurations that might improve the performance.

2312. Does the Morse requirement prejudice some Psychological Types?

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-06 00:00:00 UTC
From: garvie@iafrica.com
Message-ID: <33eafc20.7157013@news01.iafrica.com>
Source record: 192308

I have been following the various threads discussing the pros and cons of passing the Morse Test.

What strikes me in these threads is that there seems to be distinct Psychological Types coming to
the fore, for and against. I am reminded of a psychologist who once said to me that I didn't have an
aptitude for certain skills because it wasn't my Personality Type.

I was wondering if there are psychologists in the Ham community who can comment authoritatively on
this. Do some people have an aptitude for learning Morse and others not? What are the implications
of this if this is the case? Because a Pavarotti cannot read music does that bar him from the World
Stage?

FCC regulations require an absolute minimum spurious emission
attentuation of 30 dB for an HF transmitter running 5 W or less.

In addition, Part 97 stipulates that if any spurious emission causes
interference to another radio service (ie, your neighbor's TV), you would
need to attenuate the spurious to whatever level is required. If you use
a TTL device on HF, it is probable that your harmonics will extend into
the VHF range, requiring filtering as needed.

At -30 dBc, the 5 watt signal could have harmonics at a level of 5 mW. A
number of us QRP types have used less power than that to work DX under
ideal conditions. A VHF signal level of 5 mW will cause severe
interfernece to a nearby TV.

With the equipment currently being used in the
search for extraterrestrial intelligence, what is the
maximum distance at which a signal could be
detected if the signal (at the source) was equivalent in
strength to the TV, radio, or radar broadcasts
which we have on earth? Please send your answer to me
at "clscott@ualr.edu".

Thank you in advance for your answer.

Coy,

The short answer is "it depends"!

The long answer, or an attempt at it, is the following from Al Aburto at Naval Ocean Systems Command. Representative results are presented in Tables 1 and 2.

(1) Detection of broadband signals from Earth such as AM radio, FM radio, and television picture and sound would be extremely difficult even at a fraction of a Light-Year distant from the Sun. For example, a TV picture having 5 MHz of bandwidth and 5 MWatts of power could not be detected beyond 0.01 Light-Years of the Sun even with a radio telescope with 100 times the sensitivity of the 305 meter diameter Arecibo telescope.

(2) Detection of narrowband signals is more resonable out to thousands of Light-Years distance from the Sun depending on the transmitter's EIRP and the receiving antenna size.

(3) Instruments such as the Arecibo radio telescope could detect narrowband signals originating thousands of Light-Years from the Sun.

(4) A well designed 12 ft diameter amateur radio telescope could detect narrowband signals from 30 to 300 Light-Years distance assuming the EIRP of the transmitter is in the terawatt range.

What follows is a basic example for the estimation of radio and microwave detection ranges of interest to SETI. Minimum signal processing is assumed. For example an FFT can be used in the narrowband case and a bandpass filter in the broadband case (with center frequency at the right place of course). In addition it is assumed that the bandwidth of the receiver (Br) is constrained such that it is greater than or equal to the bandwidth of the transmitted signal (Bt) (that is, Br >= Bt).

Assume a power Pt (watts) in bandwidth Bt (Hz) radiated isotropically. At a distance of R (meters), this power will be uniformly distributed (reduced) over a sphere of area: 4 * pi * R^2. The amount of this power received by an antenna of effective area Aer with bandwidth Br (Hz), where Br >= Bt, is therefore:

Pr = Aer * (Pt / (4 * pi * R^2))

If the transmitting antenna is directive (that is, most of the available isotropic power is concentrated into a narrow beam) with power gain Gt in the desired direction then:

Pr = Aer * ((Pt * Gt) / (4 * pi * R^2))

The transmit antenna gain, Gt, is given by the following expression:

Gt = Aet * (4 * pi / (w^2)), where

Aet = effective area of the transmitting antenna (m^2), and
w = wavelength (m) the antenna is tuned to.
f = c / w, where f is the frequency and c is the speed of light.
c = 2.99793E+08 (m/sec)
pi = 3.141592654

For a parabolic "dish" transmit or receive antenna:

Aer = nr * pi * dr^2 / 4, and

Aet = nt * pi * dt^2 / 4, where

nt = efficiency of the transmit antenna
nr = efficiency of the receive antenna
dt = diameter (m) of the transmit "dish" antenna.
dr = diameter (m) of the receive "dish" antenna.

Similarly, the receiver gain Gr is given by:

Gr = Aer * (4 * pi / (w^2)),

but it is not used explicitly in the range equation. Only the effective area (Aer) intercepting the radiated energy at range R is required.

The Nyquist noise, Pn, is given by:

Pn = k * Tsys * Br, where

k = Boltzmann's constant = 1.38054E-23 (joule/kelvin)
Tsys = is the system temperature (kelvins), and
Br = the receiver bandwidth (hertz).

The signal-to-noise ratio, snr, is thus given by:

snr = Pr / Pn.

If we average the output for a time t, in order to reduce the variance of the noise, then one can improve the snr by a factor of

sqrt(Br * t). Thus:

snr = Pr * sqrt(Br * t) / Pn.

The factor Br*t is called the "time bandwidth product," of the receive processing in this case, which we'll designate as:

twp = Br * t.

We'll designate the integration or averaging gain as:

twc = sqrt(twp).

Integration of the data (which means: twp = Br * t > 1, or t > (1 / Br)) makes sense for unmodulated "CW" signals that are relatively stable over time in a relatively stationary (steady) noise field. On the other hand, integration of the data does not make sense for time-varying signals since this would distroy the information content of the signal. Thus for a modulated signal twp = Br * t = 1 is appropriate.

In any case the snr can be rewritten as:

snr = (Pt * Gt) * Aer * twc / (4 * pi * R^2 * Br * k * Tsys)

Pt * Gt is called the Effective Isotropic Radiated Power (EIRP) in the transmitted signal of bandwidth Bt. So:

EIRP = Pt * Gt, and

snr = EIRP * Aer * twc / (4 * pi * R^2 * Br * k * Tsys)

This is a basic equation that one can use to estimate SETI detection ranges.

```
##################################################################################
# If Rl is the number of meters in a Light-Year #
# (9.46055E+15 (m/LY)) then the detection range in Light-Years #
# is given by: #
# #
# R = sqrt[ EIRP * Aer * twc / (4 * pi * snr * Br * k * Tsys) ] / Rl #
# #
# If we wanted the range in Astronomical Units then replace Rl #
# with Ra = 1.496E+11 (m/AU). #
##################################################################################
```

Note that for maximum detection range (R) one would want the transmit power (EIRP), the area of the receive antenna (Aer), and the time bandwidth product (twp) to be as big as possible. In addition one would want the snr, the receiver bandwidth (Br), and thus transmit signal bandwidth (Bt), and the receive system temperature (Tsys) to be as small as possible.

Now we are in a position to carry out some simple estimates of detection range. These are shown in Table 1 for a variety of radio

transmitters. We'll assume the receiver is a parabolic type ("dish") antenna, similar to Arecibo, with diameter dr = 305 m and an efficiency of 70% (nr = 0.7). We'll also assume snr = 3 is required for detection and that twp = Br * Tr = 1. Note that with more refined signal processing, the detection ranges could perhaps be increased by a factor of 2 to 3 over those shown in the table. An "educated" guess for some of the parameter values, Tsys in particular, was taken as indicated by the question marks in the table. As a reference note that Jupiter is 5.2 AU from the Sun and Pluto 39.4 AU, while the nearest star to the Sun is 4.3 LY away. Also note that signal attenuation due to the Earth's atmosphere and ionosphere have been ignored. AM radio for example, from Earth, is trapped within the ionosphere.

The receive antenna area, Aer, is thus:

Aer = nr * pi * dr^2 / 4 = 51,143.2 m^2

Hence the detection range (Light Years) becomes:

R = 1.0478E-03 * sqrt[EIRP / (Br * Tsys)].

Table 1 Detection ranges of various EM emissions from Earth and the Pioneer spacecraft assuming a 305 meter diameter parabolic ("dish") receive antenna, similar to the Arecibo radio telescope. Assuming snr = 3, twp = Br * Tr = 1, nr = 0.7, and dr = 305 meters.

Source	Frequency	Bandwidth	Tsys	EIRP	Detection Range (R)
	Range (Br)	(Kelvin)			
AM Radio	530-1605 kHz	10 kHz	300 ?	100 KW	12 AU
FM Radio	88-108 MHz	150 kHz	100 ?	5 MW	38 AU
UHF TV Picture	470-806 MHz	6 MHz	50 ?	5 MW	9 AU
UHF TV Carrier	470-806 MHz	0.1 Hz	50 ?	5 MW	1.0 LY
WSR-88D Weather Radar	2.8 GHz	0.63 MHz	20	32 GW	0.05 LY
Arecibo S-Band (CW)	2.380 GHz	0.01 Hz	20	22 TW	10,990 LY
Arecibo S-Band (CW)	2.380 GHz	0.01 Hz	20	1 TW	2,343 LY
Arecibo S-Band (CW)	2.380 GHz	0.01 Hz	20	1 GW	74 LY

Pioneer 10 Carrier	2.295 GHz	1.0 Hz	20	1.6 kW	593 AU

It should be apparent then from these results that the detection of AM radio, FM radio, or TV pictures much beyond the orbit of Pluto will be extremely difficult even for an Arecibo like 305 meter diameter Radio Telescope! Even a 3000 meter diameter Radio Telescope could not detect the "I Love Lucy" TV show (re-runs) at a distance of 0.01 Light-Years!

It is only the narrowband high intensity emissions from Earth (narrowband radar generally) that will be detectable at significant ranges (greater than 1 LY). Perhaps they'll show up very much like the narrowband, short duration, and non-repeating, signals observed by our SETI telescopes. Perhaps we should document all these "non-repeating" detections very carefully to see if any long term spatial detection patterns show up.

Another question to consider is what an Amateur SETI radio telescope might achieve in terms of detection ranges using narrowband FFT processing. Detection ranges (LY) are given in Table 2 assuming a 12 ft (3.6576 m) dish antenna operating at 1.420 GHz, for various FFT binwidths (Br), Tsys, snr, time bandwidth products (twp = Br*t), and EIRP values. It appears from the table that effective amateur SETI explorations can be conducted out beyond approximately 30 Light-years provided the processing bandwidth is near the minimum (approximately 0.01 Hz), the system temperature is minimal (20 to 50 Degrees Kelvin), and the EIRP of the source (transmitter) is greater than approximately 25 terawatts.

Table 2 Detection ranges (LY) for a 12 foot diameter amateur radio telescope SETI system, operating at 1.420 GHz.

				EIRP			
Br (Hz)	Br*t	Tsys (kelvin)	snr	100TW	25TW	1TW	100GW
0.01	2	20	3	334	168	33	11
0.01	1	20	3	281	141	28	9
0.01	2	50	3	211	106	21	7
0.01	1	50	3	178	89	18	6
0.05	2	20	3	150	75	15	5

0.05	1	20	3	126	63	13	4
0.01	1	20	16	122	61	12	4
0.1	20	50	3	119	59	12	4
0.01	1	50	16	77	39	8	2
1.0	200	50	3	67	33	7	2
0.05	1	50	16	34	17	3	1

Roy, I'm am suprised that the Radio Shack employees in your neighborhood continually get away with holding those guns to your head & marching you down to the local store, in order to force you to buy those resistors or PL 259's that you would otherwise have to drive 30 miles out of the way to find or mail order them. If you detest the chain so much, then DON'T GO THERE!! Be a man of principle the next time you need to go purchase something & RS is the nearest & most convenient option-put yourself through the hardship of going through the extra inconvenience of going to a specialty store or ordering through the mail, in order to prove you are a man of your words. I find it incomprehensible that someone with such a deep seated hatred of the Tandy Corp. would even consider setting foot in a RS store, even when faced with the convenience dilemma. I'm curious what happens when you stroll into your local Food & Fuel convenience store & find out the tomatoes they peddle are not nearly as fresh as the ones at the supermarket; have you called for a boycott of them too?

As for Tandy going after usage of the word "Shack" with regards to amateur clubs/organizations/operators using it in conjunction with the hobby, I am aware of numerous local clubs who incorporate that in their slogans, and have heard nary a peep from any lawyers representing the Tandy Corporation. If it is true that Tandy has indeed registered the word "Shack" as a registered trademark (which does not seem so incredulous, as this is a nearly universal moniker for the chain store), then they have every right to go after someone who is using their registered trademark in a manner that may besmirch the name of the store. What, pray tell, is 'Bionics' Smut Shack'? I can tell you what it sounds like.......

(Title Page Description)
bianca greets you with open arms, embracing all who would come to her Shack and
contribute their wisdom, talents and love to
bianca's growing community. Come on in!
Write on bianca's walls, read from her books.
Learn and contribute! bianca likes to
accommodate all her guests as best she can,
therefore, she has developed several
different methods by which you can tour her little
hovel.

(Disclaimer at the bottom)
this site contains adult natured content.

Whoever chose that name either intended to get a lot of hits from people who go looking for adult related material, & if you think otherwise, the

you are suffering from a severe case of naivete. Do I agree that Tandy should go after Bianca & the site? Not necessarily. Do I believe that Tandy has the right to go after Bianca & the site if they feel that the use of their registered trademark is not being used in accordance to the image that they are trying to convey to people? Damn right I do.

Also, your assertion that Radio Shack does not in anyway market to amateur radio is completely baseless & devoid of fact. Radio Shack, in addition to selling the 10 meter mobile, also sells a very fine 2 meter mobile & 2 meter/70 cm HTs, and are reintroducing their dual band HT this fall. They also sell a very nice & affordable line of SW receivers & scanners, which a lot of amateurs enjoy as crossover pursuits. Are these products as good as the latest offerings from Yaesu, Icom, Drake, etc.? Nope. Are they decent products that will perform reasonably well, considering their price range & the fact that the primary market for these products is the beginning enthusiast with little time or patience for thumbing through an operator manual the size of the King James Bible? Yep.
I do not own a Radio Shack amateur/shortwave/scanner product, as I prefer to spend a little more & get something more specific & detailed to what I intend to use it for. But I have test drove a lot of the aforementioned gear, and most of them performed well with the previously mentioned considerations in mind (some, like the DX 392, a Sangean 808CS SW receiver in drag, performed just like the original, & at a much better price at the time 7/96).

As for your call for an amateur radio boycott of Tandy Corp, I believe that most fellow amateur operators, like myself, will continue to see Radio Shack as what they really are-a convenience store. If I want help with a technical problem of a nature beyond the knowledge of the amateur, I call Universal Radio, AES, Grove, EEB, HRO, etc. or visit the local specialty store (Radio City) in town, where I know that the level of technical know how & proficiency exceeds both that of most of us amateurs as well as the general retail salesperson. We've all had our bad experiences at the Shack, whether it be some 16 year old salesperson who doesn't know a balun from a keg tap, or the occasional product that doesn't seem to want to work as its makers intended. I ask you, Roy, what makes Radio Shack different, then, from the rest of the retail world? Your boycott call, folly that it is, would only serve to deprive the rest of us amateurs who do not share your agenda of an extremely useful outlet for convenient parts & products. Please carry on your personal crusade without invoking the name of the amateur community as being representative of your views.

73, Sean

"Hate and bad vibes"?!

I have to agree with Rae. What he described above was a very typical ham radio written test back in the 60s. I don't think I will =ever= forget how to draw a Collpits oscillator circuit after studying for those exams! :)

It is unfortunate that when the FCC could no longer afford to give Amateur exams they had to go to the question pool concept to avoid subjective grading. There was something about taking the exams in front of The Man that made even the code test seem simple by comparison.

Of course I still think that =real= radios glow in the dark, too. . . .

Sheeezze....

Where did all this hate and bad vibes come from?
I thought that basic spirit of Amateur Radio was the helping of other
people...

Tell ya what..
No more Novice, Tech or General tickets..
No more question pools...

To become a HAM ... each aspirant must do the following
1. Build a broad spectrum transmiter from scratch. This xmitter must
be able to produce AM, FM and PM modulated signals of variable
bandwidth. It must operate on ALL amateur bands.
2. Build a general coverage receiver from scratch. Same operational
specs as above.
3. Build a 1/4 and 5/8 GP, J-Pole and 8-element Yagi.
4. Pound brass at 20WPM

Once this has been done, the aspirant will be granted a provisional
license. This license will be good for 2 months. At the end of this time
the provisional HAM must show documentation that he/she has worked all
bands in all modes. QSLs will not do. This will have to be verified by a
VEC. Failure to provide this information will result in the aspirant
having to return to square 0.

This should allow us to license about 6 or 7 new HAMs a year ...

I don't have a FT10 and so I have not any expierience with the FT10.

I assume it is also possible to open the Band as wide as the FT10 allows it.
(It's the same at the FrEEBAND for the FT50, It trys to TX anywere).

A couple of MHz must be possible at least.

But as I said, no expirience, sorry.

rec.radio.amateur.misc

Are you tired of that long url that users have to type to connect to your web site? Well, we are now offering web site redirectors, which will shorten this process.

For $5.00 per month, you can have a web site redirector through KB8UYZ Amateur Radio. Your web site url will appear as kb8uyz.com/yourname, where yourname is the name of the directory you choose. Note: You will not receive web space on our server, simply a redirector to your existing web site.

For more information on this service, please see our web site at http://kb8uyz.com/redirectors.htm or reply to this email message. We will get back with you as soon as possible.

Thanks,
dan@kb8uyz.com

Right...but where else is one going to buy a 2N3055 transistor on a Sunday afternoon in East Podunk Hollow? R/S has its purpose, the only trick is knowing how to sort the good stuff from the not-so-good. Their "no questions asked" return policy is superb without the usual 15% re-stocking fee bullshit of other specialty electronic and computer stores. A poor product, either technically or saleswise is usually culled from the next year's catalog. One also has to admit that their product line-up has improved tremendously over the past ten years and their sales force is just that -- don't expect them to design the HV control system for a 4CX5000A California Frequency Flusher or ask them for S-parameter data on an MPF102 JFET. When I'm looking for something weird like an F to BNC adapter, I give them their catalog number and the salesdude(ss) walks right to it.

What a crock...wild goose chases such as these keep Tandy's lawyers amused, their egos inflated, and Radio Shack's retail prices elevated. It's a damn shame as the consumer utimately pays for crap like this.

...so much for my personal opinion...

Hugh Duff (hduff@ica.net) wrote:

> Why would anyone want to adjust the ratio of their keyer to be set for
> anything other than 3:1 ???

Depends on the transmitter they're keying. If the CW risetime (the time
from when the key is closed until the transmitter comes up to full power)
is long, a heavier weighting will help overcome the deficiency.

> Why do keyer manufacturers (and manuf. of radios with built-in keyers)
> allow it to be adjustable ????

Sometimes heavier keying gets thru the QRM/QRN better than normal...or
in the case of some big-gun DXers I've heard calling CQ:

DAAAAHHHdiDAAAAHHHdit DAAAAHHH DAAAAHHHdiDAAAAAAHHHHHHHHHHHHHH!!!!
(visions of Push Pull Parallel 4-1000-A plates turning canary yellow
hot and city streetlights blinking)

The Japanese hams used to use very heavy keying for some reason. I've
never heard anyone regularly using light keying. It just doesn't get out.

Scott,

I found a good deal on one a couple of years ago and bought it as a "backup". I shortly sold my 735, and have never looked back. I do not miss the features that the 725 is short, and find it to be the most useable and hardy rig I've ever owned.

A few "tuneups" are in order if you get an unmodified one, specifically the diodes used in the IF conversion should be replaced with slightly more expensive ones than Icom put in to start with (the information on these mods are available several places). I also bought one for my dad, and he seems to like it too now.

Hope it helps,

Ron, N7TAW

Oh, another thing that's important.. Be SURE you have the right
time/date, and use UTC. Especially if you worked the other station in
a contest. If the guy worked 4,000 QSOs in a weekend, and he can't
find your call near the time you wrote on your card, he's not going to
be able to search the entire log to find it. There have been
occasions I've received PSE QSL cards for contest QSOs where the
time/date were both several hours off; only through judicious use of
the FGREP utility (which most contesters aren't PC-savvy enough to
use) allowed me to confirm those QSOs..

I have the answer!

Waveshaping circuits designed into the rigs to eliminate
key clicks etc, tend to alter the ratio or Dah/dits.
This is apparently obvious at high CW rates.

Read the July 1971 QST article "A Simple IC Keyer with
Weight Control" pages 40-46.

Good Question!

Perhaps you should send your question to the Amateur
Radio Astronomy Mailing List:

1. Where do I send messages to post?

Send messages to the list to:

ara-list@cannonexpress.com

2. Where do I send subscribe/unsubscribe messages.

Send subscribe/unsubscribe messages to:

ara-list-request@cannonexpress.com

with "subscribe" or "unsubscribe" in the message body.

To subscribe to the digest version send mail to:

ara-digest-request@cannonexpress.com

with "subscribe" or "unsubscribe" in the message body.

3. What is the purpose of this list?

The purpose of this list is to share information
and ideas regarding amateur radio astronomy.

4. Who is welcome here?

Amateur and professional astronomers.

Who isn't welcome here? Flamers and those who take joy
in putting down other people. 99% of being a professional
is in your attitude. I will not hesitate to nuke from the
list those who consistently display an un-professional attitude.

5. What topics are welcome here?

If it pertains to radio astronomy it is welcome
here. A small sample of such topics would include:

Telescope construction methods.

Schematics for pre-amp and A/D circuits.

Exchange of observational data and collaborative
observations.

You get the idea.

6. A final request.

As a favor to the other list subscribers, once you have subscribed, please send a short bio to the list detailing items such as your current radio telescope setup and special observing interests, if any.

That's all folks! Once again, if you have any trouble, send mail to dtillman@cannonexpress.com.

If your main consideration is amateur packet radio, might i suggest
that you get a TNC and 2 meter radio, to start. The main packet
frequencies are around 145 mhz, eg 145.01 seems to be the
international frequency. From there you can research your area and
find the main packet bbs's. From there you can start asking more
questions.

Burt, we all laugh at you and not with you. It is really ashame that you
can't debate the issue of spread spectrum. But that is only because
you do not have any knowledge of spread spectrum. We all can
see here what you do have knowledge in and that is "rectum".

You may be right here but it is not up to any dealer: Radio Shack,
AES, etc., to enforce the laws of radio operation. How someone
operates a transmitter once it's in their possession is between them,
the FCC, and any neighbors they happen to interfere with.

2348. Help! Problems with Tek 2246 Display

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-07 00:00:00 UTC
From: Scott Sidener <sidener@umr.edu>
Message-ID: <5scmtm$1ms$1@news.cc.umr.edu>
Source record: 192266

Hi,

I have a Tek 2246 scope in which the Display behaves strangely.

The text and cursors only cover the top half of the screen. It's like they are squeezed down only to reside in the top half. If I adjust the grid illumination knob then the text and menus shift up off the top edge of the screen. They are only completely visible when the illumination is turned all the way up.

The traces, however, seem to be unaffected.

Does anyone know what could be causing this? Anyone with experiance troubleshooting the Tek 2246?

Any help would be greatly appreciated.

Thanks,

Scott Sidener N0WFL

Radio Shack just opened a new store here in Denver
by the name "Tech America". Is this the only one in USA?

Its a great store. Ham radios, Ham towers, a zillion
components, large book section, and much more.

Do you have one in your city?

That last comment contradicts your first two statements. I would have
expected you to return *everything*, not "...just about everything..."
So you were exaggerating above, huh?

Again, if something breaks, flame the manufacturer, not the seller. The only
thing RS can do is exchange the item and absorb the loss. They do exactly
that. You should thank them, not slander them.

A bit of history.... The Ham Station, in Indiana, USED to be the Ham
Shack. Until Tandy and their lawyers got through with them. The guys
at the Ham Station had to decide whether to fight Tandy and their deep
pockets, (and go under, financially) or change their name. (This was
in 1983 or there abouts.) And hams have been using the term radio
shack or 'the shack' since the beginning.

I need help about a software used to program the Philips/Simoco PRM80 VHF Transceiver.
Philps wants about 1000$ to purchase the original software.
Those radio are used for a non-profit rescue services and we can't buy this software.
Is there anybody know if there is an alternative software to program this radio or if the Philips software is available on the net?

Thanks

"You've Got Questions, We've Got Answers" definitely means they claim
to have technically competent help. They do not.

> For the most
>part RS people have always been able to find a part for me, most will
>call another store if they are out of stock.

I flatly do not believe you have done built a serious ham station or a
substantial construction project if you claim RS had everything you
needed. Out of Stock? All Radio Shack stores carry the same paltry
selection of parts in the back corner of the store. You mean you have
never needed a part that NO RS carries? I think you are ready for your
first visit to a real electronics part supplier. Please go and see
what you are missing. Buy a PL-259 and compare it with the ones you
are using.

> Do you think by RS employees asking for a license this will
> somehow clean up 2m?or 10m?

A high proportion of customers at a hamfest or ham equipment store do
have licenses, so this is not an issue. Shack markets to the general
public and honestly does not care if the radios are used illegally. I
have yet to work anyone using their equipment, and tend to wonder who
has been buying it.

And by the way, What do You Think of Flash.Net? There's another
company that doesn't live up to its hype.

Me neither. But if they are going to register phrases like "The
Technology Store" and "... We've Got Answers" (precluding other more
competent suppliers from using these phrases); then they publically
are proclaiming to have such technically proficient help and I reserve
the right to call them on it.

>
>Also, there is no requirement, anywhere in the U.S., legally or

This is true. But unlike your local Ham Radio outlet, RS markets to
the general public and couldn't care less if their radios are used by
LSB CB ops in the 10 Meter CW band.

2367. Macintosh Ham Radio Users Group

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-07 00:00:00 UTC
From: john@wd1v.mv.com
Message-ID: <john-0708970734130001@wd1v.mv.com>
Source record: 192335
Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.dx,rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

There is an informal group of amateur radio operators that use Macintosh computers called "Macnet" with > 800 members world-wide.

We stay in touch with each other via packet & Internet and we have a HyperCard stack that tells the story of each of us called "Macnet Roster" that list

o CALL SIGN @ HOME PBBS
o FULL NAME
o Street ADDRESS
o CITY, STATE, ZIP
o INTERNET ADDRESS
o MACS USED
o RADIOS USED
o SOFTWARE USED
o PASSIONS
o COMMENTS

Macnet members can then communicate with one another directly or use our Macnet Moderated Mailing List to pose comments or questions to all of us on the Net.

To join Macnet, put YOUR INFO (via EMAIL or via disk using TEACH TEXT on a formatted disk in a self addressed and stamped disk mailer that is in a large envelope clearly marked "ROSTER").

http://www.mv.com/ipusers/wd1v/Page2.html

-------<sent to all new Macnet Subscribers & Macnet Roster Updates>---------

Welcome to Macnet!

A trip to my home page also reveals there are many superb files and programs for amateur radio operators that want to use Mac computers. See more details in January 1997 QST, page 100. http://www.mv.com/ipusers/wd1v/

* Ham Radio Test Simulators - where you can go from Novice to Extra Class practicing the actual tests right on your Mac! Check out the info on the new NO CODE license or scramble your neurons and learn Morse on the Mac too!

* Macnet Email Reflector - send an Email to all Macnet users on the Internet.

* Macnet Roster - a virtual "Who's Who" HyperCard stack with > 800 entries giving the names, addresses, phone numbers, of radio operators all over the world that are using Macs. Check out their projects and

their passions and put a design on your Mac Radio future. See what neat things are being done with Macs and Ham Radio!

* Mac Ham Radio Software Listing - as the name implies, its "The List" of the latest - much of it with FTP links so what you see is what you can get your new programs with just a click.

* Ham Radio.FAQ - compiled on a Mac with a lots of links to great Mac FTP sites for radio, electronic engineering, and similar data.

73,

Yes it is a new venture run by TANDY. They have a big catalog. Interesting thing is that they chose to locate in southeast part city of Denver, a somewhat yuppified area, rather than the suburbs or some industrial part of town. It is on one of the busiest retail corridors in Colorado. It really reminded me of one of the old-line parts stores, but bigger. Only thing missing is rows and rows of vacuum tubes behind the parts counter (but yes, they do have a parts counter in the back). Not a be-all end-all electronics store, but helpful to have. I'm pretty certain it's the only one running yet, as it was written up a week or two ago in the press as a pilot for the new idea. They didn't build a new building for it - the building used to be a fred schmidt, which is a now-defunct (?) appliance store.

==========
My Yaesu is an FT-50R.
And I have an SMA-3 and the stock antenna.
FWIW, both have the same performance on UHF, specifically the
440 mhz Amateur band.
But the SMA-3 is a *lot* better than the stock FT-50 antenna on the
144 mhz band. It is also a little longer. And it is a gawd-awful
expensive thing at about $40 or $45 ....

Carl,

If you really need the card try a second request with an SASE.

I always send an SASE when I need the card. Good ragchews normally receive a card without the SASE as I really do not need the card but want to QSL anyway.

DX stations are different--always send 1 or 2 IRCs. Returns are close to 100 percent (sometimes slow). I refuse to send greenstamps--I know of one ham in Korea that required a greenstamp and used it to buy new rigs, amps, etc. I know of another DX station that requests an IRC and then give the cards to a US Military member to place into the US Postal System at the foreign base--he keeps the IRC and pays 32 cents to send the card.

When all else fails look for another station!

SWAP HIGH END NEC LASER PRINTER FOR HICKOK TUBE TESTER,
for example, 752, 752A, 539C, TV-7D, TV-10, B&K 747,
TRIPLETT OR OTHER DYNAMIC MUTUAL CONDUCTANCE TUBE TESTER,
ETC.

NEC Postscript Silentwriter LC 890 Model, 8 PPM, 2 MB Ram,
300 DPI, backlit two character lines LCD option menu
screen, external print density control, dual letter &
legal sized paper trays, dual printer ports (PC or Mac
compatible)--same as the HP Postscript high end office
model that's about $1200 right now and the only difference
is the HP is 600 DPI. I can't tell the difference between
300 & 600 DPI. NEC NEEDS MINOR REPAIR.

IF YOU HAVE A HICKOK OR SIMILAR UNIT THAT YOU WOULD LIKE
TO SWAP, LETS COMMUNICATE. Incidentally, to add the
Postscript option with all those nice Adobe fonts to a
basic laser printer usually adds $200-$400 to the base
price of the printer (licensed Adobe fonts and extra
memory required--these Adobe fonts are not in the Windows
True Type fonts, but show up only when you have this
Postscript printer listed with the ability to print them).
Hopefully, you'll be in the Ohio (northeast area) so you
can inspect it in person to avoid shipping costs for both
of us. It's heavy and not a cheap light duty type
printer.

You can email me directly at:
l.mclaughlin@popmail.csuohio.edu

Thank you

>allow it to be adjustable ????

I've often wondered the same thing!

I always use 3:1 weighting, either as the default setting of my keyer
or of the various contest software I use. I send as fast at 40-45wpm,
and people seem to copy OK.

Going to a higher weighting (4:1 or 5:1) probably does make things a
bit easier to read, at the expense of possibly losing some dits at
high speed under less-than-perfect conditions. And it damages that
"rhythm" that some of rely on at high speeds.

I remember one European station who answered my CQ with a weighting of
about 1.2:1 - and got bent out of shape when I got his call wrong...

And the SMA-3 I bought separated at its base the very first time I attempted to unscrew it from my FT-50. When I tightened it back up (only a couple of turns), in order to remove it in one piece, it turned up as an electrical "open". Nice--lasted all of 30 seconds. A dealer at Timonium acknowledged that he had one that did the same. So it's expensive AND unreliable. I now use the Diamond SRH519. Decent, and only $29. And noticeably better than the stock piece of deaf and inflexible crap. I mean antenna.

Ironically, my FT-470's stock antenna is one of the best short dual-band duckies I've ever used--even nearly as good as the Diamond RH77B I bought to replace it, which now sits on a scanner. I guess one out of two isn't all that bad.

Well, to be truththful, I don't have proof that the earth is cooling off. Much of the data in from the last four years (satellite data) is in question now so I guess I'll have to say I THINK the earth is cooling off, or I think it SHOULD be. Is that good enough? Uh...

Obviously what is mean by global cooling and warming refers to the "mean" temperature of Earth, not to temperatures in one specific locale. During the Little Ice Age there were places that were warmer than normal. The hallmark of these events is that global cooling cycles bring sharply differentiated patters (drought in some places, flooding in others) and that global warming seems to bring with it much milder conditions and a more even weather pattern. Of course the earth is always cycling between these two modes, warming or cooling, but the cooling periods seem to have a sudden onset which is followed by 2-4 centuries of gradual warming.

Look, most of what I'm concerned about has happened only since mid-1994. It will BE awhile before most of this data is analyzer and available for public digest. Plenty of e-mail I've gotten from actual researchers tell me cooling trends are already apparent even though some areas like yours may continue to warm. North Atlantic Oscillation, for instance, and El Nino may lag behind other climate forces. There's some thought that the current El Nino building up may have been aided or even caused by energy we received during sunspot cycle 22's peak which was ten years ago.

He's some links. Enjoy.

What about a mobil or handheld? There isn't really a fixed operating position, and the radio doesn't send it's serial number out. So, is it really necessary to put somebody elses call out? Can't you take full responsibility for the radio waves? Or, is there something that specifically forbids it?

ELECTRONIC VANITY APPLICATIONS FLOOD GATE 3

Gate 3 vanity filers flooded the FCC with nearly 1200 electronic and only around 300 paper applications Wednesday. The disparity was in apparent reaction to the FCC's announcement last month that it would give priority in processing to electronically filed vanity applications. But the actual number of electronic filers could be far less than the 1182 the FCC received on August 6. FCC officials in Gettysburg, Pennsylvania, believe that many hams filed more than one electronic application, possibly as a result of a glitch in the electronic filing system. Several callers to the ARRL reported

that the on-line filing system seemed to crash at the end of the electronic Form 610V. This apparently prompted many applicants to start all over again.

Whatever the final tally, the number of first-day Gate 3 applications was far fewer than the more than 3600 that showed up on the opening day of Gate 2.

The FCC will not begin to process the applications until the 10-day deadline to receive the $30 application fee has passed. Only applications for which a fee has been paid will be processed.

To clear the decks in anticipation of processing the Gate 3 applications, FCC personnel in Gettysburg have been making nearly daily runs of vanity applications that arrived prior to the opening of Gate 3 on August 6. As of today (August 8), the FCC had processed vanity applications received through July 11.

The FCC is not expected to begin processing the Gate 3 applications until mid-month at the earliest.

The vanity application fee increases to $50 on September 15. The FCC has not announced when it plans to open Gate 4.

PRESIDENT CLINTON NAMES NEW FCC CHAIR, MEMBER

President Clinton announced Wednesday that he plans to tap William E. Kennard of California as the next chairman of the FCC, subject to Kennard's confirmation by the Senate as an FCC member. Kennard, 40, already had been nominated to succeed retiring commissioner James Quello. He would step into the top spot being vacated by Reed Hundt. Kennard has served as general counsel of the FCC since December 1993. As general counsel, Kennard is the Commission's principal legal advisor and represents the agency in court. He has prior experience in communications law.

Kennard is a graduate of Stanford and of Yale Law School. If confirmed, he would be the first African-American to head the FCC.

The president also announced the nomination of Michael K. Powell of Virginia to a seat on the FCC. Powell, the son of Gen Colin Powell, is now the chief of staff of the Antitrust Division in the US Department of Justice. He also has experience in telecommunications law. He's a graduate of The College of William and Mary and of Georgetown University Law Center.

TAUZIN WANTS TEETH IN ELECTRONIC EAVESDROPPING LAW

Another bill introduced in Congress to beef up prohibitions against electronic eavesdropping has scanner enthusiasts and equipment makers worried and could affect some Amateur Radio equipment. HR 2369, the Wireless Privacy Enhancement Act of 1997, was introduced by Rep Billy Tauzin of Louisiana. If passed, it would--among other things--amend the Communications Act of 1934 to ban the sale of scanning receivers capable of receiving transmissions on any frequency allocated to any Commercial Mobile Radio Service (CMRS). The CMRS is a relatively new umbrella designation of subscriber-based radio services that act like telephone services. In

addition to cellular telephone, such services include commercial paging services, commercial air-to-ground services, offshore radiotelephone, personal communication services, and specialized mobile radio services.

HR 2369 would prohibit receiving, divulging, publishing or using any intercepted transmission, and subject violators to substantial fines. It also would make it illegal to modify equipment so that it may be used to unlawfully intercept or divulge radio communications. The FCC would be charged with investigating complaints and enforcing the stiffer regulations.

As currently drafted, the bill appears to affect equipment available to scanner enthusiasts, hams who use scanning transceivers to receive out-of-band, and hams who use out-of-band capability for volunteer work. It would not affect ham frequencies, per se. The League's Legislative and Public Relations Manager, Steve Mansfield, N1MZA, says the ARRL is studying the bill to determine its long term implications for ham radio and ham gear. The ARRL has contacted Tauzin's office to express its concerns, and Mansfield says the League "will continue to work with members of Congress to have the bill modified to reflect the needs of the Amateur Radio community."

The Tauzin bill comes fast on the heels of very similar, but less-stringent, legislation proposed by Rep Edward Markey of Massachusetts (see The ARRL Letter, Vol 16, No 29). The ARRL has met with Markey's staff to discuss the negative implications of HR 1964 for Amateur Radio. That bill was not given much chance of passage.

An incident last year in which House Speaker NewT Gingrich's cellular telephone conversation was illegally intercepted, taped and published by the media prompted calls in Congress for stronger anti-eavesdropping legislation.

FCC SEEKS COMMENTS ON LEAGUE-SPONSORED PETITION

The FCC seeks comments within 30 days on the ARRL's Petition for Rulemaking (RM 9150) that asks the Commission to improve the way it addresses serious Amateur Radio rules violations (see The ARRL Letter, Vol 16, No 16). The petition, filed in late March, calls on the FCC to "create a streamlined, privatized enforcement process" to handle and adjudicate the most serious Amateur Service rules violations. The League asked that the FCC change its rules to permit members of the volunteer Amateur Auxiliary to bring evidence of malicious interference violations directly before the Chief Administrative Law Judge. The Chief ALJ would be authorized to determine if the complainants have a valid case, to issue show-cause orders, and to designate complaints for hearing.

The League recommended that the FCC capitalize on the volunteer resources available through the Amateur Auxiliary to relieve the evidence-gathering burden in such cases.

Comments to the FCC should reference RM 9150. Address them to Secretary, Federal Communications Commission, 1919 M St NW, Washington DC 20554.

ONE LESS LITTLE LEO

The Little LEO industry that has been seeking access to spectrum below 1 GHz, including amateur bands, is about to have one less player. On July 14, CTA Incorporated of Rockville, Maryland, and Orbital Sciences Corporation of Dulles, Virginia, announced an agreement for Orbital to purchase CTA's satellite manufacturing and communications service business units. The deal is expected to close in August.

Orbital is already in a joint venture with Teleglobe to provide Little LEO services through Orbital Communications Corp. (ORBCOMM). ORBCOMM's system is already licensed and is operational on a limited basis. Uplinks are 2400 bps FSK in the 148-149.9 MHz band and user downlinks are 4800 bps FSK in the 137-138 MHz band, with beaconing in the 400-401 MHz band. In its press release announcing the acquisition, Orbital said that a CTA service it had purchased, called GEMtrak, may be expanded to use the ORBCOMM network in the future. GEMtrak is a system for tracking truck trailers and rail cars and their cargoes.

ARRL Executive Vice President David Sumner, K1ZZ, noted that the combining of CTA's satellite business with ORBCOMM's will reduce by one the number of companies seeking Little LEO licenses. "CTA was one of the companies that sponsored the ill-conceived and controversial 'flexible allocation' proposal that we had to oppose earlier this year," he said. "ORBCOMM did not endorse the flexible allocation concept."

The Little LEO issue is on the agenda for the World Radiocommunication Conference (WRC-97) to be held this fall. ARRL Technical Relations Manager Paul Rinaldo, W4RI, is a member of the US delegation. The US is now finalizing its proposals for the conference. At this point, no US Little LEO proposal for WRC-97 would affect ham radio.

FOALE STILL ACTIVE ON HAM RADIO FROM MIR

US astronaut Mike Foale, KB5UAC, was active on Amateur radio from the Russian Mir space station as he and his two Russian crewmates awaited the arrival of the two cosmonauts who will help repair the crippled ship. The cosmonauts then will replace the current Russian crew, while Foale is to remain aboard Mir until September when astronaut David Wolf, KC5VPF--a medical doctor--is scheduled to arrive via the space shuttle. Foale has been aboard Mir since May.

Foale told MIREX chief Dave Larsen, N6CO, this week that the SAFEX FM repeater remains off the air until repairs can be made to the spacecraft. "SAFEX won't be on until Priroda is powered. That won't be until Spektr power is restored--everything depends on this, including SAFEX," Foale said. The Spektr module was damaged in late June when it struck a Progress supply rocket during a test maneuver. Foale and the Russian crew members spent this week preparing for the arrival of the new crew on Thursday (August 7).

Foale also has been awaiting a new TNC for the Mir packet system, which has been malfunctioning in recent weeks and losing messages. A new TNC was to arrive with the two Russian crew members.

Foale has been using 145.985 MHz while over the US and the 145.200/800 MHz split pair elsewhere.--thanks to AMSAT News Service and Dave Larsen, N6CO

UPS STRIKE MIGHT DELAY ARRL SHIPMENTS

The current United Parcel Service (UPS) strike very likely will delay deliveries of some shipments from ARRL Headquarters. Fortunately, our Shipping Room Supervisor, Steve Capodicasa, had anticipated the walkout. "Consequently, over a week prior to the actual strike, we had already begun routing our orders through the United States Postal Service," said Circulation Manager Deb Jahnke. "We believe that we were able to divert virtually all customer orders from being left in limbo in the UPS system." But, Jahnke said that since all carriers have suspended their normal service standards, "delays will be inevitable."

ARRL Business Manager Bob Boucher says that nonessential mailings are being held back in hopes the strike won't last long. "In the meantime any items going out will be done via USPS Priority, if the cost is comparable," he said.

UPS delivers approximately 80% of all US packages, and other carriers so far have not been able to pick up the slack.

RUDY SEVERNS, N6LF, IS NEW QEX EDITOR

Rudy Severns, N6LF, of Cottage Grove, Oregon, is the new editor of QEX: The ARRL Experimenter's Exchange. Rudy has volunteered to take over the helm from Jon Bloom, KE3Z, as of the August issue. Jon, who's now heavily involved in the ARRL's electronic publications and software operation, had served as QEX editor for 5 years.

Rudy, an electrical engineer and a ham since 1953, has contributed to the ARRL Antenna Compendium series, Communications Quarterly, and the 18th edition of The ARRL Antenna Book. "I view QEX as an important vehicle for keeping our technical tradition alive," Rudy said in his introductory editorial in the August issue of the journal. Rudy welcomes contributions of technical articles from QEX readers. Contact him at n6lf@arrl.org or by writing to him care of QEX, 225 Main St, Newington, CT 06111.

In addition, Senior Assistant Technical Editor Bob Schetgen, KU7G, has accepted responsibility for managing the HQ part of the QEX editorial process and will work closely with Rudy throughout the editing and production process.

Domestic subscriptions to QEX: The ARRL Experimenter's Exchange are $15 for ARRL members and $27 for nonmembers. Write QEX, 225 Main St, Newington, CT 06111; tel 860-594-0200; toll-free 888-277-5289.

TIRED OF THE SAME OLD ON-THE-AIR STUFF? TRY SOMETHING NEW

Get ready to learn something new--from the exciting world of Amateur Radio satellites! Sign up for a fast-moving, five-hour workshop in southern California on everything you need to get "on the birds." Become an expert operating through digital satellites, the "easy-sats," low-orbit and high-altitude satellites such as AO-10, Russian satellites, and learn a bit about the Russian Mir and NASA's SAREX missions. Prepare for the upcoming Phase-3D satellite. You'll hear about equipment needs and how to use all

modes, including dial-in access to a packet satellite without spending money for equipment.

WHO: Instructor Keith Baker, KB1SF, and other AMSAT experts.
WHEN: Friday September 12, 1 PM - 6 PM.
WHERE: Riverside Convention Center - Riverside, California
HOW: Space is limited. To register, contact Rosalie White, WA1STO, at ARRL HQ (tel 860-594-0237; fax 860-594-0259) before September 9, 1997. The fee is $20 for ARRL members and $25 for nonmembers. You'll receive free materials and five hours of practical information. This workshop is sponsored by AMSAT and the ARRL. Those who take part all day will earn a certificate for 0.5 Continuing Education Units.--Rosalie White, WA1STO

HIGH POWER NOT WELCOME ON OSCARS

BJ Arts, WT0N, serves as an Official Observer (OO), and has received many complaints about satellite operators running excessively high levels of transmitter power within the uplink passband of Amateur communication satellites. Recently, he observed stations on FO-20 and FO-29 running enough power to be much stronger than the beacon signal. In one case, two operators, who were in contact with one another, were causing FO-20's AGC to block out all other incoming signals operating with normal levels of transmitter power.

Satellite users should make certain that their downlink signals are no stronger than that of the beacon transmitter. Excessive levels of uplink power prevent other users from equally sharing the satellite's transponder. It only takes several watts of transmitter power to make contacts through low-earth orbiting Amateur satellites. If ground stations have difficulty hearing their uplink signal with more than several watts of power, then a significant upgrade in receiver sensitivity may be in order. This can be accomplished by using a higher gain downlink antenna, high quality coax, or the use of a low-noise preamplifier (preferably mounted at the feed point of the antenna).--AMSAT News Service

[End of Part 1]

==========
The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

Let's get something straight right now, OYE BOY! This is a public newsgroup and I will post my responses, or "opinions" anytime I damn well please! This will be done regardless of your feelings or preferences on the matter.

>Basically, unless you have something relevant to contribute (like
>actually hearing my call being used on HF), I suggest that you keep
>THY MOUTH shut.

Oooh...here we go with more thinly-velied threats and innuendo AGAIN. I'm still waiting for you to make good on your last batch of threats against me, OYE BOY. You remember, don't you? The ones where you publicly accused me of "defamation" because I allegedly refered to you in an unflattering manner. I'm still waiting for a response to my request for information...specifically, the grounds under which you feel you have a cause for a legal action against me. Before you begin making more idle threats, how about answering my response from the previous ones.

Get a clue, OYE BOY. You're the laughing stock of this newsgroup. The modern-day cyberspace equivalent of the village idiot.

As for someone bootlegging your callsign, this is probably just another desperate attempt to attract attention on your part. Think about it, OYE BOY. Why would anyone WANT to bootleg YOUR call? Why would anyone want to be associated with you in any way?

> When you are using someone else's station, what call do you use for
> identification??? Your call or the owners? Or both? I just dont get
> the dual licsense thing yet :)

Hi Ron,

Quick and easy rule of thumb:

The call sign identifies the station, not the operator.

Use the call of the station you are operating from.

When the operator license class held by the control operator
exceeds that of the station licensee and he is operating in a
band segment exceeding the station licensee, an indicator consisting
of the call sign assigned to the control operator's station must
be included after the call sign.

Here are a couple of examples: (Calls are fictitious)

WB4GXH is a Novice.
WB9DLL is an Extra.

WB9DLL is operating at the station of WB4GXH.

If he operates in the Novice band, he would sign "de WB4GXH".

If he operates in the Extra band, he would sign "de WB4GXH/WB9DLL".

ZCZC AP32
QST de W1AW
Propagation Forecast Bulletin 32 ARLP032
From Tad Cook, K7VVV
Seattle, WA August 8, 1997
To all radio amateurs

SB PROP ARL ARLP032
ARLP032 Propagation de K7VVV

The week began with zero sunspot activity, but the sunspot number rose steadily to 45 on August 6 and 55 on August 7. Solar flux also increased toward the end of the week, and at 1700 UTC on August 7 at the Penticton, BC observatory it was 76.2, 77.9 at 2000 UTC, and 78.6 at 2300 UTC. Flux values are expected to peak over the weekend around 78, then fall back to the low seventies.

Solar flux is expected to stay in the mid seventies through the month of August, and we could see some slightly active geomagnetic conditions around August 27 due to recurrence. This is predicted because conditions were unsettled to active the last time the Sun was in that position relative to Earth, about 27 to 28 days before.

Expect 20 meters to still be the best band for DX, although if the flux gets above 80, some better propagation could occur on 15 and 17 meters. 10 and 12 meters should be poor, but look for interesting north-south propagation, particularly as we move toward the equinox, only about 6 weeks from now. 30 and 40 meter conditions should also improve around that time.

Dave Flarity , VE3DVE, wrote to comment that the same propagation information that appears on WWV at 18 minutes after every hour and at the 303-497-3235 phone number given in ARLP031, is also on the web at: gopher://proton.sec.noaa.gov:70/00/latest/wwv. It is updated very three hours.

Sunspot Numbers for July 31 through August 6 were 0, 0, 11, 27, 12, 39 and 45 with a mean of 19.1. 10.7 cm flux was 70.4, 71, 70.8, 72.2, 72.7, 74.8 and 76.8, with a mean of 72.7, and estimated planetary A indices were 19, 8, 5, 15, 8, 3, and 4, with a mean of 8.9.

This weekend is the Worked All Europe CW Contest, and here are some path projections to Europe from the United States:

From the Eastern U.S., 80 meters looks good from 0030z to 0445z, and 40 meters from 2300z to 0600z. 20 meters should open from 1230z to 0030z with the best period from 1900z to 2200z.

From mid-USA, check 80 meters from 0100z to 0430z, 40 meters from 0030z to 0545z, and 20 meters from 1930z to 0100z. 15 meters may open around 2030z to 2330z.

From the West Coast 80 meters may open briefly around 0400z. 40 meters looks good from 0230z to 0530z, and 20 meters from 2000z to 0100z and 0530z to 0800z. There is a chance of a 15 meter opening from 1600z to 0000z.

From Anchorage, Alaska 20 meters is the only real option. It looks good from 1430z to 0000z and better from 0500z to 0900z. There is a small chance of a 15 meter opening around 1600z to 2300z. 40 meters could open with weak signals around 0300z to 0500z.

SB QST ARL ARLB044
ARLB044 Electronic vanity applications flood Gate 3

Gate 3 vanity filers flooded the FCC with nearly 1200 electronic and only around 300 paper applications Wednesday. The disparity was in apparent reaction to the FCC*s announcement last month that it would give priority in processing to electronically filed vanity applications. But the actual number of electronic filers could be far less than the 1182 the FCC received on August 6. FCC officials in Gettysburg, Pennsylvania, believe that many hams filed more than one electronic application.

Whatever the final tally, the number of first-day Gate 3 applications was far fewer than the more than 3600 that showed up on the opening day of Gate 2.

The FCC will not begin to process the applications until the 10-day deadline to receive the 30 dollar(s) application fee has passed. Only applications for which a fee has been paid will be processed.

To clear the decks in anticipation of processing the Gate 3 applications, FCC personnel in Gettysburg have been making nearly daily runs of vanity applications that arrived prior to the opening of Gate 3 on August 6. As of August 8, the FCC had processed vanity applications received through July 11.

The FCC is not expected to begin processing the Gate 3 applications until mid-month at the earliest.

The vanity application fee increases to 50 dollar(s) on September 15. The FCC
has not announced when it plans to open Gate 4.

To all radio amateurs

SB QST ARL ARLB046
ARLB046 ARRL studies new eavesdropping bill

The ARRL is closely studying another bill introduced in Congress to beef up prohibitions against electronic eavesdropping. The bill, HR 2369, was introduced by Rep Billy Tauzin of Louisiana. Dubbed the Wireless Privacy Enhancement Act of 1997, it has scanner enthusiasts and equipment makers worried and could affect some Amateur Radio equipment. If passed, it would--among other things--amend the Communications Act of 1934 to ban the sale of scanning receivers capable of receiving transmissions on any frequency allocated to any Commercial Mobile Radio Service (CMRS). The CMRS is a relatively new umbrella designation of subscriber-based radio services that act like telephone services. In addition to cellular telephone, such services include commercial paging services, commercial air-to-ground services, offshore radiotelephone, personal communication services, and specialized mobile radio services.

HR 2369 would prohibit receiving, divulging, publishing or using any intercepted transmission, and subject violators to substantial fines or prison terms. It also would make it illegal to modify equipment so that it may be used to unlawfully intercept or divulge radio communications. The FCC would be charged with investigating complaints and enforcing the stiffer regulations.

As currently drafted, the bill appears to affect equipment available to scanner enthusiasts, hams who use scanning transceivers to receive out-of-band, and hams who use out-of-band capability for volunteer work. It would not affect ham frequencies, per se. The League's Legislative and Public Relations Manager, Steve Mansfield, N1MZA, says the ARRL is studying the bill to determine its long term implications for ham radio and ham gear. The ARRL has contacted Tauzin's office to express its concerns, and Mansfield says the League ''will continue to work with members of Congress to have the bill modified to reflect the needs of the Amateur Radio community.''

The Tauzin bill comes fast on the heels of very similar, but less-stringent, legislation proposed by Rep Edward Markey of Massachusetts (see The ARRL Letter, Vol 16, No 29). The ARRL has met with Markey's staff to discuss the negative implications of HR 1964 for Amateur Radio. That bill was not given much chance of passage.

An incident last year in which House Speaker Newt Gingrich's cellular telephone conversation was illegally intercepted, taped and published by the media prompted calls in Congress for stronger anti-eavesdropping legislation.

Frequently I hear hams say, THE name HERE is_____.
How often do you say when you meet someone (assuming your name
is Charlie), THE name HERE is Charlie? You never do that right? After
to do so is so impersonal and asinine that you would not want
to seem like a fool-then why do it on the air? Just because you
are a ham is no excuse not to be personal. Of course you could
really sound like THE jerk of the year by saying, THE first
personal here is Charlie (at least if you are not personal-you are
using the word-albeit it in an extremely impersonal way).
Also why say "here", is your name any different when you are "there?"

Finally why do so many hams have the same last name?
I have heard "Brad By-the-Way", Steve By-the-Way", Fred Steve By-the-Way",
and many more of the "By-the-Way" family.

73 from we here (not there) at K1OIK where THE name are Burt.

[The ARRL Letter, Vol 16, No 31 (August 8, 1997) -- Part 2]

1997 ARRL/TAPR CONFAB SET FOR OCTOBER

The year's premier event in Amateur Radio digital communication--the 1997 ARRL and TAPR Digital Communications Conference--is set for October 10-12, 1997, in Baltimore, Maryland. The location is just minutes away from Baltimore-Washington International Airport (BWI).

This marks the second year in which the ARRL Digital Communications Conference and TAPR Annual General Meeting have joined into one conference. The 1997 DCC will be co-hosted by AMRAD (Amateur Radio Research and Development Corporation).

The ARRL and TAPR Digital Communications Conference is an international forum for radio amateurs and experts in digital communications, networking, and related technologies to meet, publish their work, and present new ideas and techniques for discussion. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications.

Papers are invited for publication in the Conference Proceedings. Presentation at the Conference is not required for publication. Papers are due by August 20, 1997. Submit papers to Maty Weinberg, ARRL, 225 Main St, Newington, CT 06111; lweinberg@arrl.org. Paper submission guidelines are available on-line at http://www.tapr.org/dcc. ARRL and TAPR especially welcome papers from full-time students to compete for the second annual student papers award.

The conference has scheduled seminars and symposiums on Friday afternoon and Sunday. Conference papers, selected topics thread, lunch, and dinner are on Saturday. Symposiums held at this year's DCC will include a full-day symposium on APRS packet-location software, a half-day symposium on spread spectrum system design and theory, and a half-day seminar on Friday entitled "RF Basics for Computer Weenies: Helping the RF-Challenged Get the Most Out of the New High-Speed Wireless Toys."

For more information, contact TAPR, 8987-309 E Tanque Verde Rd, No. 337, Tucson, AZ 85749-9399; tel 817-383-0000; fax 817-566-2544; e-mail, tapr@tapr.org; Web http://www.tapr.org.

1997 FAR SCHOLARSHIP WINNERS ANNOUNCED

The Foundation for Amateur Radio (FAR) has announced the 1997 winners of the 59 scholarships it administers. These scholarships were open to all radio amateurs meeting the qualifications and residence requirements of the

various sponsors. FAR is a nonprofit organization incorporated in the District of Columbia that represents more than 75 clubs in Maryland, the District of Columbia and Northern Virginia. It is devoted exclusively to the scientific, literary and educational pursuits that advance the purposes of the Amateur Radio service.

Congratulations to these scholarship winners!

FAR Silent Key Memorial Scholarships ($1000 each): Carolyn M. Creel, N3UXZ, Silver Spring, Maryland; Antonio Fominaya, N3UIO, Greenbelt, Maryland; David J. MacCormack, N3BUX, Ellicott City, Maryland.

QCWA Memorial Scholarships: Ralph Hasslinger (W2CVF) Charter Member Scholarship ($1100), Angela C. Skolaut, N0UAI, Great Bend, Kansas; Max Jacobson-John Kelleher Family Scholarship ($900), Richard S. Garrett, AA0CH, Florissant, Missouri; QCWA Robert Cresap (W9LRI) Memorial Scholarship ($700), Landon E. Quan, KE6UAS, San Rafael, California; QCWA Leo Meyerson Family Living Scholarship ($600), John H. Ghigliotti, KC5GJJ, Norman, Oklahoma; QCWA Edwin Woodruff (W3SX) Memorial Scholarship ($600), Dakota A. Derr, AA0NB, Burlington Junction, Missouri

QCWA Memorial Scholarships ($800 each): Jason S. Arntz, KB5ZQZ, Fort Worth, Texas; Shannon Brassfield, KB5RBX, Oklahoma City, Oklahoma; Dustin K. Bennett, KC5HGZ, Taloga, Oklahoma; David A. Case, KA1NCN, Hampton, Connecticut; Angela M. Cruz, KB5UJR, Slidell, Louisiana; Gregory Gutka, N3NLF, Easton, Pennsylvania; Jeremy M. Hanken, N1KWT, Hiram, Maine; Joshua J. Henry, KB9JJG, Wisconsin Rapids, Wisconsin; Amanda L. LaValle, N2TSO, Woodstock, New York; Jeffrey A. Sherer, N3IPT, Allentown, Pennsylvania.

Radio Club of America Scholarships ($750 each): From the Grebe Fund, Ethan Handwerker, N1SOH, Lexington, MA; from the Poppele Fund, Zachary D. Sadecki, KB7FUV, Ashton, Idaho, and James S. Sikorski, N3PBH, Wapwallopen, Pennsylvania; from the Somers Fund: John M. Steenis, KI7LX, Phoenix, Arizona.

Richard G. Chichester Memorial Scholarship ($1000), sponsored by Patricia and Jack (W9AMF) Chichester: John Cowden, KC5DCP, Benton, Arkansas.

Young Ladies' Radio League Scholarship ($1500): Michelle R. Sciarini, KB8ILX, Dover, Ohio.

Columbia Amateur Radio Association Scholarship ($1000): Michael S. Calhoon, N3SMI, Arnold, Maryland.

Baltimore Amateur Radio Club Scholarships ($1000 each): Andrew M. Leeds, N3MCB, Finksburg, Maryland; Nicholas P. Schaub, KE3HV, Baltimore, Maryland; Franklin L. Wright, N3OQB, Silver Spring, Maryland; Aileen K. Hudspeth, N3YAC, Woodbine, Maryland; Ernie Dobos Memorial Scholarship, Andrew J. Guenther, N3NRP, Leonardtown, Maryland.

Ralph V. "Andy" Anderson , K0NL, Memorial Scholarship ($1000): Nicholas R. Guydosh, N2MSE, Apalachin, New York.

Dade Radio Club Tropical Hamboree Scholarships ($1000 each): Eric P. Kessler, KD4DOF, St Petersburg, Florida; Wendy Joy Silverman, KC4ZQW, Spring Hill, Florida;

Rose Ellen Bills Memorial Scholarships ($2000 each): Paige E. Forrest, KE3UB, Baltimore, Maryland; Daniel S. Zimmerman, N3UMH, Erie, Pennsylvania.

Victor C. Clark Memorial Scholarship ($1000), sponsored by the Vienna Wireless Society: Matthew P. Ipock, KM4WZ, Chesapeake, Virginia.

Frederick Amateur Radio Club Scholarship ($1000): Mark W. Lazzaro, N3BVW, Mt Airy, Maryland.

10-10 International Net Scholarships ($1000 each): Nicholas Goad, N1OOX, Randolph, Vermont; Nathan Jeffries, KI7QT, Spokane, Washington; Timothy Mosher, WX9I, Woodridge, Illinois.

Kevin Barry Perdue Memorial Scholarship ($2000), sponsored by Kay (WT3P) and Carter (N3AO) Craigie: Patricia Pelczar, KA1TPM, Rocky Hill, Connecticut.

WARAC Memorial Scholarships ($1000 each), sponsored by the West Allis Radio Amateur Club: Steven D. Miller, KB9DFE, Spooner, Wisconsin; Christopher D. Molek, KB9GTK, Richland Center, Wisconsin; Amy L. Tlachac, N9TLN, Wisconsin Rapids, Wisconsin.

South Milwaukee Amateur Radio Club Scholarships ($500 each): Benjamin F. Kablau, AA9RI, Shorewood, Wisconsin; Steven Lampereur, KB9MWR, Green Bay, Wisconsin; Raymond G. Meyer, N9PBY, Port Washington, Wisconsin; James E. Slone, KB9JSI, New Palestine, Indiana.

Nanticoke Amateur Radio Club Scholarship ($1000): Scott M. Affens, KA3TUE, Olney, Maryland.

Murgas Amateur Radio Club Scholarship ($500): Mary E. Jauregui, N8UNV, Philadelphia, Pennsylvania.

Virginia Beach Hamfest Scholarships ($1000 each): Victoria L. Crawford, N4XDR, Virginia Beach, Virginia; Darla L. Dilks, KB2LJX, Culpeper, Virginia.

Martin County ARA Scholarship ($1000): Steven Vitrella, KC4VBE, Jensen Beach, Florida.

Baltimore Radio Amateur TV Society Scholarship ($1000): Dana L. Eshelman, WS3L, Ft Washington, Maryland.

Beatrice Chapman, K1OKC, Family Memorial Scholarship ($500), sponsored by the Augusta Amateur Radio Association: Donald G. Trask, N1TZR, Augusta, Maine.

Free State Amateur Radio Scholarship ($1000): Hernan G. Hidalgo, N3OKP, Silver Spring, Maryland.

Robert E. True Memorial Scholarship ($1000), sponsored by Mrs Shirley True Banning: Brian Meek, KC8BNP, Westerville, Ohio.

Lawrence E. and Thelma J. Norrie Memorial Scholarship ($2500): James W. Gregory, AD4GN, Paducah, Kentucky.

Old Old Timers Club Scholarship ($600): David P. Swaney, N3KCS, Mifflinburg, Pennsylvania.

For more information, write to: FAR Scholarships, 6903 Rhode Island Ave, College Park, MD 20740.--Hugh Turnbull, W3ABC.

FCC SEQUENTIAL CALL SIGN UPDATE

SOLAR UPDATE

Solar soothsayer Tad Cook, K7VVV, of Seattle, Washington, reports: The week began with zero sunspot activity, but the sunspot number rose steadily to 45 on August 6 and to 55 on August 7. Solar flux also increased toward the end of the week, and on August 7 at the Penticton, British Columbia, observatory it was 76.2 at 1700 UTC, 77.9 at 2000 UTC, and 78.6 at 2300 UTC. Flux values are expected to peak over the weekend around 78, then fall back to the low 70s. Solar flux is expected to stay in the mid 70s through the month of August, and we could see some slightly active geomagnetic conditions around August 27 due to recurrence. This is predicted because conditions were unsettled to active the last time the sun was in that position relative to Earth, about 27 to 28 days before.

Expect 20 meters to still be the best band for DX, although if the flux gets above 80, some better propagation could occur on 15 and 17 meters. On the other hand, 10 and 12 meters should be poor, but look for interesting

north-south propagation, particularly as we move toward the equinox, only about six weeks away. Conditions on 30 and 40 meters also should improve around that time.

Dave Flarity, VE3DVE, wrote to comment that the same propagation information that appears on WWV at 18 minutes after every hour, is also on the Web at gopher://proton.sec.noaa.gov:70/00/latest/wwv. It is updated every three hours. You can also get the latest WWV forecast over the phone at 303-497-3235.

Sunspot numbers for July 24 through 30 were 44, 65, 58, 53, 26, 24 and 12 with a mean of 40.3. The 10.7-cm flux was 78.7, 80.4, 76.6, 74.5, 74.2, 72.7 and 71, with a mean of 75.4, and estimated planetary A indices were 10, 5, 4, 6, 5, 3, and 7, with a mean of 5.7.

Sunspot numbers for July 31 through August 6 were 0, 0, 11, 27, 12, 39 and 45 with a mean of 19.1. The 10.7 cm flux was 70.4, 71, 70.8, 72.2, 72.7, 74.8 and 76.8, with a mean of 72.7, and estimated planetary A indices were 19, 8, 5, 15, 8, 3, and 4, with a mean of 8.9.

This weekend is the Worked All Europe (WAE) CW Contest, and here are some path projections to Europe from the United States:

From the East Coast, 80 meters looks good from 0030 UTC to 0445 UTC, and 40 meters from 2300 UTC to 0600 UTC. 20 meters should open from 1230 UTC to 0030 UTC with the best period from 1900 UTC to 2200 UTC.

From the Midwest, check 80 meters from 0100 UTC to 0430 UTC, 40 meters from 0030 UTC to 0545 UTC, and 20 meters from 1930 UTC to 0100 UTC. 15 meters may open around 2030 UTC to 2330 UTC.

From the West Coast 80 meters may open briefly around 0400 UTC. 40 meters looks good from 0230 UTC to 0530 UTC, and 20 meters from 2000 UTC to 0100 UTC and 0530 UTC to 0800 UTC. There is a chance of a 15 meter opening from 1600 UTC to 0000 UTC.

From Anchorage, Alaska 20 meters is the only real option. It looks good from 1430 UTC to 0000 UTC and better from 0500 UTC to 0900 UTC. There is a small chance of a 15 meter opening around 1600 UTC to 2300 UTC. 40 meters could open with weak signals around 0300 UTC to 0500 UTC.

IN BRIEF:

* Correction: We mistakenly included an old URL for the WM7D call sign databse in The ARRL Letter, Vol 16, No 30, August 1. The correct address is http://www.wm7d.net/.--thanks to Mark Downing, WM7D

* This weekend on the radio: The Worked All Europe Contest, CW, is the highlight of this weekend. See August QST, page 95 for details.

* VWOA honors two hams: The Veteran Wireless Operators Association has honored two hams for their contributions to the communications industry. The

VWOA presented its Marconi Memorial Gold Medal of Achievement to Bob McNamara, N1KHF, and Alex Zimny. McNamara, the former chief of the FCC's Private Wireless Division (within the Wireless Telecommunications Bureau), now is director of regulatory technology and compliance for NEXTEL. Zimny directs the FCC's Compliance and Information Bureau in New York City. The Marconi Gold Medal has been presented annually since 1928 to those who have made significant contributions to the communications industry for advancement or promotion of the radio art. Both presentations were made at the VWOA awards banquet last May.--J. Michael Shaw, K2LRE

* MS Society honors ham: The Greater Delaware Valley Chapter of the National Multiple Sclerosis Society has honored volunteer Russ Stafford, AA3CH (ex-WB3JVX), of Linwood, New Jersey, as a member of its Leadership Class of 1997. Stafford was recognized for donating "his time and energies to the organization through his Amateur Radio activities" over the past 15 years. Stafford was cited for recruiting hams to assist in the MS 150 City to Shore Bike Tour, which attracts hundreds of cyclists for the overnight ride from Philadelphia, Pennsylvania, and Ocean City, New Jersey, and back. In addition to the bike tour, Stafford also organized coverage for seven of the Greater Delaware Valley's MS WALK sites in April. Stafford, who heads a security service, comes from a ham radio family. Both his grandfather and his father were hams.

* New England DXCC Convention: The New England DXCC Convention and dinner will be held October 12, 1997, 8 AM until 5 PM, Elks Hall, Rt 110, Chelmsford, Massachusetts (near the junction of I-495 and Rt 3). The program includes presentations on J3 and Spratly with K1XM and KQ1F, plus Heard Island with N6EK. Tickets are $22.50 in advance and $25 at the door. Seating is limited. Send an SASE and check payable to Patriot DX Association, Box 8, Prides Crossing, MA 01965. For more information, call Mel Cole, WZ1Q, 508-927-1953.--Bill Bithell, N1BB

* Linenger, MIREX lauded in Congressional Record: Ham astronaut Jerry Linenger, KC5HBR, and MIREX were recognized in the pages of the Congressional Record earlier this year. The Congressional Record of May 23, 1997, contains the remarks of Sen Carl Levin (D-Michigan) marking the occasion of Linenger's return after 5 months aboard the Mir space station. During his tour of duty aboard Mir, Linenger and his crewmates experienced a fire and problems with the station's oxygen-generating systems, lost of power and coolant system leaks. Also mentioned was Linenger's use of ham radio to speak to a fifth-grade class in Charlevoix, Michigan, during his time on Mir. Levin recognized Linenger, an Eastpoint, Michigan, native, for "courage, perseverance and professionalism" in the face of adversity and congratulated him on "a mission heroically accomplished."--thanks to Will Marchant, KC6ROL

* Moonbounce requiem: Elaine Fortin, VE3UXZ, will air a eulogy today (August 8) for the late moonbounce enthusiast Dennis Mungham, VE3ASO, via 1296 MHz moonbounce. Mungham died in March. The on-air gathering will also recognize Mungham's 50th birthday. The moonbounce will originate from the station of Ted Sparrow, VE3BQN, in Elmvale, Ontario. Sparrow and Fortin were close

friends of Mungham's. VE3UXZ and VE3BQN have invited other stations to join in the remembrance on 1296.05 MHz starting at 1600 UTC on August 8 and continuing until 0245 UTC on August 9. Fortin will transmit her eulogy at 2200 UTC on August 8.--Elaine Fortin, VE3UXZ

* Balloon-based repeater to launch: The North Okanagan Radio Amateur Club (NORAC) of Vernon, British Columbia, Canada, plans to launch a balloon August 9 that has a crossband repeater aboard. Dubbed VBX (for Vernon Balloon eXperiment), the launch will take place during the sixth annual Sky High Hamfest on Silver Star Mountain. Launch time has been set for 11 AM PST. The input frequency will be 446.00 MHz and output will be 146.52 MHz. Sponsors will be looking for stations in British Columbia, Alberta, the northern US and points east to help track the balloon's course. NORAC is offering a $50 reward plus free admission to next year's Sky High Hamfest to the lucky finder. For more information, contact Wilfried, VE7OHM, gwmulder@junction.net or Michael, VE7TFD, michaeli@junction.net.--RAC

* RSGB ends D-I-Y Magazine: The Radio Society of Great Britain has ceased publication of D-I-Y (for "do it yourself") Magazine. The RSGB says publication ended with the July-August issue. The decision was made for financial reasons. The RSGB said that in light of the demise of D-I-Y, it will expand the "Down to Earth" pages in RadCom, the Society's journal.--RSGB

* DJ5RT honored: Dr. Fred Ruppert, DJ5RT, has received the Bundesverdienstkreuz (Federal Cross of Merit) for "continuous and outstanding efforts by ham radio in medical services in African Countries and on the air." The award was made by German President Roman Herzog on June 20. DJ5RT is a member of the DL0MAR Medical Assistance Radio program, the German equivalent of MARCO. The MAR net meets daily at 0625 UTC on 14.332 MHz.

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

Hi,
Name is Gary,
I am looking for a seperation cable for the IC-706, I believe the part number is: OPC-581 or the longer cable, OPC-587.
If you have one of these and are willing to part with for a reasonable price, let me know. I would also be interested in other accesories for the 706, filters for ssb, desk mic, auto tuner ect.
Please remove XX out of address before replying.
Thanks
Gary

Now you can submit your Web Page to over 620 Internet indexes in a few short minutes and watch your traffic soar!

The Central Registry has helped thousands of sites like yours greatly improve the performance of their Web Page. The more indexes you are registered in, the more traffic your Web Page is going to receive. Being registered in "the top" indexes is not enough. Why not have your Web Page registered in every index throughout the world that will generate extra traffic for you?

The Central Registry is the leader in Web Page registration and promotion. We are the oldest and most well established service of this type on the Internet. We process more Web Page registrations than all of our competitors combined. The Central Registry is the only service that dynamically asks you for the exact same information each index requests, assuring accurate and thorough registration. Unlike most services, we do not exclude indexes with larger input forms and various detailed categories. No other registration service can compare to our value, professionalism and performance.

Please come visit our web page today at: http://www.CentralRegistry.com and see what some of our customers have had to say about the overwhelming traffic increases they have seen as a result of being registered everywhere. Thank you.

Sincerely,

The Central Registry

Message-ID: <5se91e$ev1@news.Hawaii.Edu>
Source record: 192227

I've got a Standard LMR crystaled on 164 MHz that I was going to
part with, but I might try to crystal it for 2m, intead. Anyone
know if Standard has an email address? Better yet, does anyone
know the crystal formulas for their 150-170 MHz transceivers?
Thanks in advance,
Jeff KH2PZ

2409. reciprocal licensing - FCC action?

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-08 00:00:00 UTC
From: r.s.eckman@larc.nasa.gov
Message-ID: <slrn5um3mj.fpa.r.s.eckman@eos1.larc.nasa.gov>
Source record: 192228

Last year there was an FCC notice of proposed rule making that would have enabled US amateurs to participate in the CEPT system to make temporary operating in Europe (and other countries adhering to the CEPT system) much easier. I believe that these rules would have applied in the opposite sense, allowing foreign amateurs (in the CEPT system) easy reciprocal privileges in this country.
I recall that the FCC expected that the negotiations to join the CEPT system would be wrapped up by the new year (i.e., 8 months ago). However, I've seen no announcement of any progress on this NPRM or any status reports.
Does anyone know what's going on with this rule making? Are negotiations stuck at the State Department level or at some other level?

On 8 Aug 1997 01:00:33 GMT, "Lewis Stephens" <lps1@swbell.net> wrote:

>The Icom Cable that comes with the software works flawlessly on my T-7A.

yes that cable is wired differently than the MFJ cable. The MFJ cable
is designed for CI-V control, the cloning cable you have uses a
different connection. CI-V control uses a 2 conductor connector with
the " hot " being attached to the tip where the clone cable uses a 3
conductor connector with the " hot " attached to the Ring. The sleeve
is ground in both cases and on the clone cable the tip is empty.

Indeed. I think it safe to say man didn't cause the last ice ages,
little or big... :)

I think it equally important for scientists to have to read literature
as it is for literates to learn some science... :)

Perhaps in the case of the former, Kafka's, "The Bucket Rider", will
do for starters. As to the latter, perhaps Gamov's "One, Two Three...
Infinity!" would, perhaps be motivational....

Granted, it is hard to keep you're perspective about the orders of
infinity, when you are simply a donkey endlessly walking on a
twisted plane........ but in space, recall, no one can hear you bray!

Yeah, you may have. What I want to do is use the earpiece in
the CB unit. I'm not a ham, so is there something about CB I'm
missing? I thought that the handheld unit's have better range than the
small RS unit I have. I also have an old Kenwood 2-meter radio, but no
license to use it, so that's out of the question until I get my
license at least.

Radio shark's parts quality has gotten better than that 15 -20 years
ago. But still won't hold a candle to real quality stuff like
AB or Amphonal(sp). But usable, I find that filing the nice shiny
chrome plating off the PL259s to the brass helps soldering..

As for the sales droids, what can you expect for minimun wage?
Anyone who actually knows this stuff gets real jobs.
I have long since quit expecting salesmen to know anything about the
stuff they sell. Maybe they might know about the clothes in a clothing
store, but forget anything else. They'd sell crates of bananas
if that were luctrative(sp).o

True. Look at all the trendy, non-radio junk they've sold over the
years...especially at Christmas time: "Robie Robot" coin banks,
battery-operated video poker games, pencil sharpeners, lava lamps, etc.

>the card.
>
>When all else fails look for another station!

Tom,

I wonder how strange many DXers' views are when it comes to the issue of QSLing cost. I sometimes notice narrow-minded discussions about the precise cost of a return letter from Taka-Tuka Island and the remaining cents or about what the guy on the other end does with all these $$ that he required (buying equipment, paying trips to Dayton, etc.)

Here is why I think that most of these discussions are ridiculous:

* In most cases the discussion's subject ($) is negligible compared to the cost of the complaining ham's equipment and other ham-related expenses ($$$$$).

* Many people are willing to spend hours in the pile-ups for a single QSO but then start calculating if they should include another $ to their direct request or not.

* Some hams (particularly from the US) do not recognize that there are countries in the world where airmail letters cost more than 60ct, like in Germany (1.70$).

* Some people do not know that there is a buro...

Sure, there are some bad guys on the scene: Those who do not reply at all, those who ask for more than is actually needed to reply, those who do not use the buro though being a club member, etc. I guess that their percentage is way below 10 percent. In these cases it's the best idea indeed to work another station.

I handle QSLing in a very simple manner:

- Send the "new ones" directly. I use to include 1$ more than I assume the actual postage to be on the DX side.

- Send second direct requests not earlier than 6 months after the first one.

- Send all other cards via buro.

- Ignore all "QSL via Box xxx..." messages and send via buro if you don't really need the card. The return rate is decent but largely above zero.

I don't care what the DX station does with the remaining cents or what way he sends the letter QSL to me as long as he *does* send me the QSL.

He was asking about taking the earphone/microphone/vox and applying that part to a cb radio. It could be done, but is probably not reasonable for inexperienced people (experienced people wouldn't have to ask). There *are* units already made this way for cb operation on motorcycles. I helped a neighbor install one on his motorcycle. It also had an "intercom" function so he and his wife could converse more or less normally while on the road. Sorry, they're cruising somewhere and I don't even remember the brand name. Try looking in rv and motorcycle newsgroups for more info. There is also a cb newsgroup if I remember correctly.

>Weight Control" pages 40-46.

Not quite the same thing. Weighting compensation for TX key up delay
will work only for a certain speed of code. A better solution is to
use something like the Super Keyer II which can insert an extra few
milliseconds of on state following a dit or a dah.

Remember, keying delays are constant, while weight time varies with
keyer speed.

>Perhaps I'm overlooking something ? :(

There are a couple of reasons.

Reason #1: Before the days of "electronic precision" in keying,
Morse was a manual art. An operators fist was a second "signature",
and many operators cultivated a distinctive style. This was especially
true where more than one operator shared a single call sign. You
could tell who was on watch at KFS by the fist of the operator.

Even with the advent of electronic keyers, some of this old
preference exists, and I must admit I get pretty bored with the
machine-perfect-sterile-without-personality we hear today. If you
ever heard the melodic fist of pioneers like W4KFC, you would not
have asked the question. <grin>.

Reason #2: Under "less than ideal" conditions, a little overweighting
with emphasis on the DAH seems to make copy a bit easier.

I just checked the nameplate on my 90HP Evinrude. It puts out 67.8KW.
(The CE guys measure power in KW.) At that rate 75HP would work
out to about 56.5KW.

Now if I can only figure how to put my Evinrude on 20 meters!

[Replace the x with 8 for correct E-Mail Address]

Bury Radio Society is pleased to announce that they will be holding their ever popular Amateur Radio and Computing Fair for 1997 at the Castle Armoury in Bury on Sunday, the 14th September, 1997.

The Castle Armoury, known locally as the Drill Hall, is a New Venue for this Annual Fair, being just round the corner from the Former Venue (the Castle Leisure Centre). It is in Castle Street, just near the Parish Church and the Two Tubs Pub in the Town Centre of Bury, in easy reach of the Bus/Metrolink Interchange and Junction 2 of the M66 Motorway, from where it will be signposted. Talk In will be on Channel S22 (145.550 MHz FM) in the Two Metre Amateur Band. There will be ample Car Parking available near to the Castle Armoury on the Day, look out for the Stewards.

The Doors open at 10.30 am, half an hour earlier for Disabled Persons. There will be a multitude of Stalls and Exhibits covering all Aspects of the Hobby of Amateur Radio as well as Computing. There will be a Bring and Buy Area and a Prize Draw also.

There will be ample Seating Areas within the Hall so that Visitors may rest between going round the Stalls and Exhibits and to provide an opportunity to meet up with and chat with Old Friends. There will be Hot and Cold Food and a Licensed Bar available also.

For those Members of the Family not interested in either Amateur Radio or Computing, the Town Centre of Bury has many Attractions including the Castle Leisure Centre, which has many Sporting Facilities as well as two Swimming Pools, and the East Lancashire Railway, which often has Steam Trains running at Weekend as well as many interesting Exhibits, both these Attractions being less than two minutes walk from the Castle Armoury.

This year's Bury Radio Society Annual Amateur Radio and Computing Fair will be bigger and better than ever and certainly not to be missed.

Potential Exhibitors should write to the Exhibitions Manager, Bury Radio Society, c/o Mosses Centre, Cecil Street, Bury, Lancashire BL9 0SB without delay as there are only a few Stalls

still available.

The Bury Radio Society meets every Tuesday Evening at the Mosses Centre in Cecil Street, Bury, commencing at 7.45 pm and Everyone is welcome. The Mosses Centre is in the Town Centre just across the Car Park from the Dual Carriageway (Angouleme Way). Ring 0161 761 2079 during Office Hours for Directions to the Mosses Centre.

>represented.

>On a slightly different note, I believe the League seeks to gather
^^^^^^^^^^
Although I respect your opinion, and mine might be similar were
asked to answer from the "gut", this thread seems to have pointed
to a more scientific way to answer the question. Your support for
the League is clear, but your opinions are just that. We all have
them, like 2 meter handhelds, hi hi.

The League has the power to really answer these questions, in a way
that is nearly undisputable. I would like to see that done, it would
support their legitimacy in many ways with the ham community. It
might put to rest a lot of idle talk about opinions that distracts
hams from the real issues that need to be solved. For the conspiracy
theorists, it might put the pressure back on the League to do the
hard things that need to be done.

2436. Corrected: A Better J-Pole

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-09 00:00:00 UTC
From: arrow146@aol.com
Message-ID: <19970809154501.LAA26840@ladder02.news.aol.com>
Source record: 192153

Hello to the Group.

Mike Melland, KB9QHU is building the Better J-Pole and
noticed an error I made in the construction plans I Posted.

The length of the angle bracket should be 5 1/2" NOT 5"
The spacing between the elements should be 4 1/2 inches.

Sorry about this mistake, here is the corrected plans......

Here are the instructions for the J-Pole.
Remember, the spacing is important, If you use any material
other than what is shown here, you may have to change the spacing
to get a low SWR.
Please e-mail me, and let me know how this works out.
and let me know if you have any questions.
You may want to print the page showing the J-Poles at....
<A HREF="http://members.aol.com/Arrow146/index.html">Arrow Antenna</A>
or
http://Members.aol.com/Arrow146/index.html

Construction Plans for the Model J146 2 Meter Solid Aluminum J-Pole

Parts Needed:

Radio Shack # 21-961 3/8-24/SO239 Mount (Mobile CB Antenna)
Radio Shack # 15-826 TV Mast U-Bolt Clamp Assembly
About 80 inches of 3/8 diameter Solid Aluminum Rod.
5 1/2 inch piece of strut angle Aluminum 1 1/2 X 1 1/2 X 3/16 Thick.
2 Stainless Jam Nuts 3/8-24 thread

Tools needed:

Drill Press with drill Bits up to 1/2.
Tap & Die for 3/8-24 thread.
Sander or file to de-burr the cut edges.
2 9/16 wrenches & a 3/4 wrench.
Vice-grips

Make sure the piece of angle Aluminum is exactly 5 1/2 inches long.
Drill 2 1/4 holes on one side, centered to fit the U-Bolt for mounting.
On the other surface of the angle
Measure in 1/2 in from each end and drill a 1/4 pilot hole.
This should give you 4 1/2 from center to center of the two holes.
Redrill one of the pilot holes to 11/32 Then tap the hole with a 3/8-24
Tap.
Redrill the other pilot hole to 1/2

Finish as required.

Cut a piece of the 3/8" Aluminum rod to about 59".
Attach a vice-grip to one end.
Using a 3/8-24 Die cut in about 8 threads in the other end.
Screw on the Coupling Nut that came with the SO239 Mount
Tighten as much as you can.
Measure the rod & coupling nut & cut to exactly 57 1/2"

Cut a piece of the 3/8" Aluminum rod to about 21"
Attach a vice-grip to one end.
Using a 3/8-24 Die cut in about 14 threads in the other end.
(If you don"t have jam nuts, cut enough threads for 2 nuts & the thickness
of the angle bracket.)
Screw on one of the Jam nuts & tighten as much as you can.
Measure from the bottom of the nut and cut the rod to exactly 19 1/4"
(Remember the nut must be included in the Measurement.)
(Put a small amount of grease on the threads)
Screw the element into the threaded hole of the angle bracket and tighten.
Screw on the other nut and tighten it.
Attach the 57 1/2" element in the 1/2" hole using the rest of the SO239
Mount.
Mount & test your new antenna. SWR should be < 1.2-1 at 146 MHz and
<1.4-1 at 144 &148 MHz.

This Model J146 is available from Arrow Antenna for only $ 35.
The J146/440 Dual Band with single SO239 feed is only $ 43.
Please add $ 6. Shipping & Handling per order (for US Funds).

DIVISIONAL NEWS

NEW MEMBERS

The following applications for membership were approved at the Council meeting last Friday evening:

FULL MEMBERS:
VK2WL Edward W BASTOW of Kempsey
VK2ANN Dennis W MORRIS of Vincentia
VK2XFS Blair BOWLER of Sydney
VK2WRP Richard F PETTIT of Wollongong
VK2BTT Philip A ORCHARD of Lurnea
VK2PTK Thomas K BAKER of Gunnedah
VK2GNL Roy W SAUNDERSON of Robertson
VK2KCN Nell C CORNISH of Castle Hill
VK2MD W Steven IRELAND of Berowra Heights

ASSOCIATE MEMBERS:
Terry FAKE of West Pennant Hills
Peter R B McRAE of Forster
Kevin ASHFORD of Auburn

Applications for Membership since the end of January 1997 now stands at 89.

We trust that these new members will have a long and happy association with the VK2 Division.

--Eric Fossey VK2EFY.

These new members of course go into the next monthly draw for Fluke 12B Digital Multimeter. Everyone who joins the WIA during 1997 is in with a chance to win.

Existing members who renew their membership during 1997 go into the draw for a Kenwood TM-733A VHF/UHF FM/packet rig worth $1255. Life members and those on a current three year membership are automatically entered into the draw.

Good luck to all those who join the WIA or renew their membership.

STOP PRESS!

A limited number of copies of Fred Swainston's "Radio Theory Handbook for Radio Amateurs" now available at the VK2 Divisional Bookshop. Cost is $45.00 per copy plus $6.00 postage & handling.

--Submitted by Eric Fossey VK2EFY,
Divisional Secretary & Bookshop Officer

DURAL COMMITTEE MEETING.

Dural Committee Members are reminded that the next committee meeting will be held on Sunday the 24th August at VK2WI after the morning broadcast.

--73 Tim VK2ZTM - for the Dural Committee.

CHANGE OF ADDRESS

No, the VK2 Division is not leaving Parramatta. The address in question is the Division's Internet email address. From now on, please address email correspondence to us at this address:

vk2wi@ozemail.com.au

The current Dialix address will be phased out of use over the next few weeks. If you didn't catch the address, don't worry - just go to the VK2 Divisional home page, and you'll find the details at bottom of the page.

REMEMBRANCE DAY WEEKEND

A reminder that the Remembrance Day Contest will be next weekend - Saturday the 16th and Sunday the 17th August. The R D opening address is conducted just before 6 pm Saturday and is combined with a special broadcast which commences at 5.30 pm.

This broadcast replaces the Sunday morning broadcast.

The Sunday evening broadcast is as normal at 7.30 pm.

Your Support of the Remembrance Day Contest is invited, even if you only end up making a few contacts. Its your operation and submitted log which will help VK2. We need your score!

You'll find the contest rules in the July issue of Amateur Radio magazine, also on Internet; just go to the VK2 Division home page at

http://marconi.mpce.mq.edu.au/wia/

and follow the links in the "What's New" section

WICEN NEWS

Although WICEN was not activated for the Thredbo disaster (there being no problems with communications), it is worth mentioning that several members are also in the SES and Cave Rescue, and perhaps other squads, all of whom helped in some way.

As this bulletin was composed before Saturday's AGM, we cannot tell you the outcome; full details will be on next week's broadcast. In the meantime, we would like to thank those brave souls who woke up before dawn this morning, to provide communications assistance for the City to Surf Fun Run, especially Eric VK2KUR, who took over the organising at the last minute.

A new event on the WICEN calendar is the "Cycle Sydney 50km Bike Ride", to be held next month, on Sunday 21st September; the contact for this event is Alan VK2YYJ.

Central Coast WICEN would like to invite interested members to the Shahzada Horse Endurance Ride, over August 25-29th. This is the premier event on the Endurance Riders calendar, and is a 400km, 5 day horse endurance test conducted in the area around St Albans, north-west of Sydney. To provide effective communications for this event, we require generally fit people, with a car, camping gear and radio equipment. If there are sufficient numbers, then the job of Co-ordinator will be rotated on a daily basis, providing excellent training and building both personal skills and team development. It is ideal for anyone wishing to improve their WICEN skills, and non-WICEN people are also welcome. Comprehensive briefing notes will be made available for those interested. At the moment, we have just two confirmed starters, and confirmation of participants must be given two weeks in advance for logistical purposes.

Even if you can help out for just one day, please contact the organiser, Ian Rosser VK2XB, on the Heathcote or Gosford repeaters, at home on (043) 74-1077 after hours, or mobile on 018-295-545. Ian says, half-jokingly, that anyone who owes him favours should assist, if they want to stay in his good book.

There are several events next month, including the Central Coast meeting on 12th September; the aforementioned Cycle Sydney 50km Bike Ride, on 21st September; and the VRA AGM at Randwick on the weekend of 27th-28th September.

If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on 015-097-217.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

DX REPORT

SPRATLY ISLANDS - . Bob N2OO, and Bob N0RN will be active from August 14 to 18 as either 9M0OO or 9M6OO. Pekka OH2YY will be active August 19 to 22. Call sign unknown at this time. Check SSB on 40, 20, 15

and 10 meters, and possibly the newer bands.

CAMBODIA - Mike XU6WV and Harv XU2FB continue to be active on 20 meters. Look for them between 1130 and 1430z on 14192, 14195 and 14226.5 kHz.

MACQUARIE ISLAND - Tom VK0TS has become increasingly active over the last few days. Watch for him on 14222 kHz starting around 0400z and 3799 or 7075 kHz around 1100z.

PAKISTAN - JA1EZM will be active August 9 to 17 as AP2AP from Karachi.

TRISTAN DA CUNHA - Ian ZD9IL can be found on most bands.
MALAWI - Eli IN3VZE will be active until August 25 as 7Q7CE. Operations will be on SSB on 20, 15 and 10 meters.

WESTERN SAMOA - Perry WH6XY is active as 5W1PC until November and can be found mostly weekends operating SSB on 15, 17 and 20 meters.

WALLIS AND FUTUNA ISLANDS - Paul FW5IW will be active until August 14th. Reports state he will be active on CW only on 15, 20, 40 and 80 meters.

GUAM - Ray WH6ASW will sign WH6AW/KH2 from mid August until December.

BENIN - Sigi DJ4IJ will be active until September 10 as TY1IJ, mainly on 160, 80 and 30 meters.

NORFOLK ISLAND - Kevin VK9NX is here for about 2 weeks. He has been heard most days on 80 meters between 1000 and 1200z.

CHINA - BT1IARU will be operated by IARU Region 3 Conference participants from September 4 to 16.

--ARRL DX Bulletin 34, dated 7 August, 199

JOTA 97

John Gibling, VK2EKG, is looking for assistance in running a JOTA station on the 18th and 19th of October this year at GUNNAMATTA PARK, CRONULLA.

He is planning to operate between 10am Saturday to 10am on the Sunday, EST.

Tents and equipment are already being provided and he only needs assistance with operating.

If anyone can assist for one to two hour or more, either Licensed or Unlicensed, could they please contact John on:-

Phone 02 9524 9457 or drop him a line to 36 BEAUFORD AVENUE CARINGBAH NSW.

--JK GIBLING VK2EK

CLUB NEWS

WAVERLEY AMATEUR RADIO SOCIETY

Many of you listening to this broadcast would be familiar with the Heard Island DX-pedition earlier this year and I am sure would have liked to have taken part. The next best thing is to come along to our next meeting where David Muller, VK2JDM, who was the only VK expedition member, will give a presentation.

Those who have heard David's talk and seen his video and slides say that this is something not to be missed and that it will appeal to anyone with an interest in the Antarctic. So make a note in your diary for 7:30 pm

on Wednesday, the 20th of August. Anyone interested is welcome to come along.

Our clubhouse is next door to the Rose Bay RSL Club in Vickery Avenue, Rose Bay, off New South Head Road.

--Simon Buxton, VK2EII, President

PARRAMATTA AMATEUR RADIO CLUB

Parramatta Amateur Radio Club's meeting nights are the first and third Thursdays of the month. The club also runs a 2 meter net on the Thursday evenings that are not meeting nights. The net is found on the club repeater, 146.750 Mhz, commencing at 8pm local time.

The format of the meetings include discussions on topics of interest, some of the past topics have included:- demonstrations of PC software of interest to Ham's, antenna design, propagation and Dxing, VK0IR Heard Island Talk and practical nights.

The meetings will commence at 7.30PM and is open to members and guests.

The clubs meeting rooms are located at Parramatta RSL Club, Macquarie St Parramatta.

Hope to see you there.

--David - VK2JDM PARC Secretary

AUSTRALIAN AMATEUR TELEVISION CLUB

THE NEXT MEETING OF THE A.A.T.C. Inc WILL BE HELD ON AUGUST 10TH - IN 2 HOURS TIME

A TECHNICAL OVER VIEW ABOUT HOWL ROUND PHASE SHIFTER WILL BE GIVEN BY VK2XOF MARK + NEWLETTER + TECHNICAL PROBLEM ABOUT AERIAL SITING FOR THE MEMBERS TO SOLVE + GENERAL RAG CHEW

NEW - AATC NETT DETAILS, RE TIMINGS TO BE ANNOUNCED AT TODAYS GENERAL MEETING BY VK2TBF WAYNE

THIS MEETING IS AS USUAL OPEN TO ALL MEMBERS AND ANYONE INTERESTED IN AMATEUR OR SATELLITE TELEVISION ON THE AIR OR THE INTERNET.

NEW SAT. RX BOARDS AVAILABLE TODAY - SEE VK2GIO DAVE FOR MORE INFORMATION ABOUT ATV. CONTACT BOB THE PUBLICITY OFFICER ON (02) 9587-3491 DURING NORMAL CIVILISED TIMES.

--A.A.T.C. Inc. Publicity Officer Bob Barnes

VHF DX GROUP

THE VHF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR GENEROUS ALLOCATIONS IN THE VHF SPECTRUM AND ABOVE.

EVERY SUNDAY THE GROUP HOLDS AN INFORMAL NET ON TWO METRES FM AT 11 AM. THE PURPOSE OF THE NET IS TO ALLOW FM-ONLY OPERATORS THE OPPORTUNITY TO CONTACT PEOPLE NOT NORMALLY ACTIVE ON FM AND TO FIND OUT ABOUT ACTIVITIES ELSWHERE ON THE BAND.

TO MAKE THE EXERCISE EASIER FOR ALL CONCERNED, THE NET HAS MOVED FROM ITS OLD SIMPLEX FREQUENCY TO THE BLUE MOUNTAINS REPEATER ON 147.05 MHZ. THE FACILITY HAS KINDLY BEEN MADE AVAILABLE BY THE BLUE MOUNTAINS RADIO CLUB, CALL SIGN VK2HZ - THE CALL FORMERLY HELD BY THE LATE BILL MOORE, ONE OF THE ORIGINAL VHF PIONEERS IN VK2.

ANYBODY IS WELCOME TO CALL IN AND JOIN THE DISCUSSION. FIND OUT WHAT GOES ON BELOW 144.600 MHZ! NET STARTING TIME IS 11 AM SUNDAYS.

OUR THANKS TO THE BLUE MOUNBTAINS RADIO CLUB.

--SUBMITTED ON BEHALF OF RICHARD SOULIE, VK2ARS

THE HORNSBY & DISTRICT ARC. INC.

Our next meeting is the imformal get together, at 8:00 pm. in the Mount Colah Community Centre. Pierre Close Mount Colah. (near the eastern entrance to the railway station.) on Tuesday the 12-8-1997. Our next formal meeting is on the 26th. August at which our quest speaker will be Keith VK2ZZO the talk will be on ATV and a little on what goes on behind the scene to bring the test transmissions, from VK2TVG, the technology station to the viewers. Don't forget the Remembrance Day contest, we have some members that have pledged their service, but a few more, would be appreciated. (There has been no response as yet remember it is next Saturday & Sunday the contact number is 9807 2490 VK2WRT. John.)

Training Classes. For more informatio contact Tony VK2BTL by phone on 9487 3383 once more 9487 3383.

The Club holds a Net each Monday night at 8:00 pm. on VK2RNS, with a frequency of 147.250 with a positive offset. Do join in if you have a licence, if you are a listener set your reciever to 147.250. We would like to
hear from you, or better still we would like to meet you at one of our meetings, you will be made quite welcome.

If you would like more information about the Club, write to HADARC., Post Office Box 362., Hornsby 2077., or phone John VK2WRT on 9807 2490.

--Submitted by John. W. Turner VK2WRT Publicity Officer.

FISHER'S GHOST AMATEUR RADIO CLUB

Classes are held in Basic Electronic Theory and Morse Code every Wednesday Evening from 7:00 pm at the Campbelltown High School, Chamberlain St. Campbelltown

Also every Third Tuesday of the Month from 7:30 pm, at the Campbelltown High School, is the General Meeting night with lectures on popular subjects.

A new series of Theory classes will start on Wednesday 13 August. Jamboree-of-the-Air is on the weekend of the 18th and 19th of October, Operators and helpers arerequired to make this weekend a success. Could members who are able to help on these days contact John VK2TJE or Les VK2TJ.

The Club would like to send a "Get Well Soon" greeting to two of our members, Mary Murphy VK2KHY, and Frank Barsanti VK2FDB.

This month's lecture is on the 19 th of August and is about High Speed Packet.

The September lecture is being presented by the Blue Mountains ARC and will be about "Fox Hunting".

Upcoming Events are:

August 19: High Speed Packet
September 16: Fox Hunt Information Night presented by Blue Mountains ARC
October 18/19: JOTA
October 21: Home Brew Competition

--Publicity Officer: Chris VK2ZCJ Ph.: (046) 81 9365 (Home)

GLADESVILLE NEWS.

Members and visitor& are reminded that the August monthly meeting will be tomorrow night Monday, the 11 th, at 7.30 pm. Parking is available opposite in the public car park.

The August Newsletter was posted a couple of days ago.

For contact with the Gladesville Amateur Radio Club Incorporated you can ring the club phone - (02) 9427 0530 [repeat] or write to P. O. Box 49 Gladesville 2 111.

--73 Keith VK2ZZO President / TV Co-ordinator

THE NEXT MEETING OF ACCA LTD. WILL BE HELD ON MONDAY THE 18 OF AUGUST 1997 AT 7:30PM AT THE CROWS NEST CLUB, LOCATED AT HAYBERRY STREET, CROWS NEST. THIS IS ACCESSED FROM WEST STREET AND THERE IS USUALLY PARKING SPACE AVAILABLE IN THE STREET AND UNDER THE BUILDING.

SOME OF THE MEMBERS WILL BE ARRIVING AT THE CLUB BEFORE THE MAIN MEETING FOR A MEAL. SOMEONE IS USUALLY THERE TO USE THE BARBEQUE BY ABOUT 6:30PM.

THE SPEAKER FOR THIS MEETING WILL BE RICHARD MURNANE VK2SKY. VISITORS WILL BE VERY WELCOME TO ATTEND.

Members of the Wireless Institute of Australia and other radio amateurs in New South Wales will probably know Richard Murnane VK2SKY, as the current Broadcast Officer for the weekly broadcast from Dural.

However, quite apart from such valuable efforts for the propagation of information to radio amateurs, Richard has been responsible for setting up, not only the Web page on the Internet for the New South Wales, Division of the WIA but has performed the same service for the Federal body. Apart from these activities, Richard has carried out the same service for a number of other communications organisations with a Federal form of membership. He has provided both a home and the effort required to establish Web pages for these organizations which include AAPRA, WAHRA and ACCA Ltd.

Richard will be talking about his involvement with Internet and in particular what is involved in establishing and maintaining Web pages. It should be a very interesting presentation.

--Peter Jensen VK2AQJ, President

CENTRAL COAST AMATEUR RADIO CLUB

The Central Coast Amateur Radio Club will be hosting a Ladies Night lecture next Friday 15 August 1997.

Peter Rysdyk VK2FFA has recently returned from crossing the Atlantic and touring the Caribbean by yacht. He will be describing his travels and showing you slides about his 16,500 Km trip.

Members and visitors are invited to attend and to bring their ladies and friends. The clubhouse is heated. Coffee, tea and biscuits wiII be available.

The lecture will commence at 8.00 pm next Friday Friday 15 August 1997 and will be held in the Central Coast Amateur Radio Club Clubrooms,

Dandaloo St, Kariong.

Enquiries may be directed to 043 402500.

BROADCAST ROSTER

Next weekend, 16th & 17th August 1997

Saturday evening:
Announcer: Tim VK2ZTM
Engineer: Jeff VK2BYY

*** NOTE - NO SUNDAY MORNING BROADCAST ***

Sunday Evening:
Announcer: Bernard VK2IDS
Engineer: Colin VK2HCT

If you would like to submit a news item for inclusion in the VK2 Divisional

broadcast, please send it to us by one of the following means:

by post to PO Box 1066, Parramatta, New South Wales 2124
by fax to (02) 9633-1525
by packet radio to BCAST@VK2WI.NSW.AUS.OC
by Internet email to vk2wi@ozemail.com.au (NB new address)

The deadline for submissions is 2pm on the Friday preceding the broadcast; if sending by packet or Internet, please allow for forwarding delays in the network.

If you want your news item to run for several weeks, please submit separate copies for each week, and vary the text of your news items, so the listeners don't get bored hearing the same thing over and over... and of course check your news items for clarity. The more care you take with your news item, the better the announcer will read it.

I think you would find that a lot of the folks you QSO'ed with didn't have a clue what your /AG meant. They probably thought it was some exotic portable designation.

I am a Japanese and staying in IL . I have a permit of an alien
amateur radio license in USA. Is it possible for me to join Maryland-DC
QSO Party ? I would like somebody to give me more information about the
contest content and its rules. My call sign is W9/JA4EOC. Thank you
very much.
My son-in-law`s email address is listed below.
[golmsted@ice.net]

2441. Herman a graduate assistant in his fifties!!!!

For everyone who the idiot herman has lied to about his position at the University of Hawaii, he is no more than a Graduate Assistant. He looks totally clueless with his 50 year old likeness on a page of 22 year old kids. I sure hope you get your Masters before you hit Social Security age moron. Oh, and Curtis bite me.

We were considering this for our club call also until my wife pointed
it out. Got W0TEX instead.

OK, what happens when you're having trouble separating code from the ringing in your ears due to hearing damage acquired during military service? I have tried numerous times to learn code so I can upgrade me tech license, but always get the same thing - noise!

From: David HM Spector <spector@zeitgeist.com>
Message-ID: <33ED291D.BAF49560@zeitgeist.com>
Source record: 192162

Yup. Just what the subject says. Way back in 1979 when I got my ticket there was a company called "The Colorado Silver Co." that would make custom belt buckles with your callsign on them.... I'm wearing mine right now.

It just occurred to me that I will need a new one if I am lucky enough to get one of the calls I have requested since gate 3 has opened...

Unfortunately, the aforementioned company seems to be no more (*sigh*).... does anyone know of anyone who can still make such items..?

please respond via email, I'll summarize to the newsgroup if there are any useful responses.

I do it all the time Burt, and you know it's funny I've enjoyed
conversations about many different subjects on the air, some with people
who have said "My first personal is..." Amazing isnt it? That I might
actually enjoy a conversation with someone who speaks like that?

I guess Im not as socially advanced as you Burt, but I try to enjoy
amateur radio for what it is and try not to get so wrapped up in talking
or behaving a certain way on the air. Too bad for you, Im sure there
have been many that could have shared much with you, unfortunatly they
didn't act or speak like Burt Fisher expected them to so you didn't
bother with them.

Yes, saying "The first personal here is..." or the "handle here is..."
may sound silly but Im not ready to consider someone a JERK as you say
just because they say that. Instead I'll respond "Hello my name is Tim"
if he chooses to follow my format fine, if not who's to say Im right and
he's wrong?
You must find it very difficult to communicate with others, it doesn't
seem like ANYONE is qualified to talk with you on the air.

Too bad for you. The rest of us are having such a good time.
I love the new phrase the high school kids are throwing around,
I think I'll pass it along.
"Sucks to be you Burt!"

8. "The RAIN Dial-up" from Chicago
9. Weekly Propagation Forecast
10. RSGB's "D-I-Y" Magazine Ceases Publication
11. Special Event Station Calendar
12. "Tower Climbing Safety" with Greg Stoddard, KF9MP
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
audio is available each Sunday in 8-bit .WAV file format, sampled at
11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm
through the courtesy of the Blue Ridge Video and Digital Society of
Roanoke, VA. A separate "RealAudio" file is also available at this
site. The service is carried on VHF/UHF repeaters throughout North
America and by WA0RCR on 160 meters at 1860 kHz. Contact your local
amateur radio club or repeater operator if "This Week in Amateur
Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at

There is a way around that.

There are, as I remember two types of front end converters. The
first has a fixed LO that, you could say, converts a whole band (like 49
metres for example) and you tune along your dial to hear the stations, even
though strong local AMBC station have been known to get into the works and
leave their signals at various spots.

The other way is to have a VFO (Variable Frequency Osc.) mix it's
output with the incoming RF. You would leave your radio dial on a quiet
spot and tune by the VFO and NOT the radio dial.

I made a post some time ago about the theory behind this. If people
are itnerested, I will re-write it and repost it.

2454. Re: Station Identification

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-09 00:00:00 UTC
From: ke4zv@bellsouth.net
Message-ID: <33ec9b36.9182174@news.atl.bellsouth.net>
Source record: 192171

On 8 Aug 1997 15:18:46 GMT, legere@pantheon.yale.edu (Ronald Legere)
wrote:
> I have a quick and easy question:
> When you are using someone else's station, what call do you use for
>identification??? Your call or the owners? Or both? I just dont get
>the dual licsense thing yet :)

Ok, this can get convoluted. If someone *loans* you their
equipment (even informally for a few seconds), you operate it
under *your* station license's call sign. This is no different than
if you had purchased equipment. It doesn't matter where the
equipment is located (in the US), as long as you have legal
possession and control of it. It is (however temporarily) your
station.

Now if you operate someone else's station *under his direct
supervision*, then the station uses *his* station call sign and
your operation is third party operation, no different than if you
were an unlicensed person. All third party restrictions apply.

Ok, that's pretty simple. Now here's where it becomes convoluted.

If you operate another person's station *as designated control
operator*, then you operate under *his* call sign, but are limited
to *your* operator's license privileges while doing so. If you operate
within both his and your operating privileges, there is no problem.
It becomes more complex if your privileges are greater than his.
In that case, you have to use *both* call signs to show that your
operating privileges allow you to use his station in that manner.

There's very little reason for this latter situation to occur. Normally,
you'll either outright borrow the equipment and operate it under your
station call sign, or you'll operate as a guest of the other operator as
a third party (in which case it doesn't matter if you have a license at
all).

1512 MORNING TERRACE DRIVE
CHINO HILLS, CA 91709

Let's also say that the mailing only receives a 0.5% response. That comes out to 10 orders a day X $5.00 per order. That's $50 in additional income a day for 5 minutes of work. Imagine, that comes out to an additional $18,250 a year. Can you use an extra $18,250 a year for 5 minutes of work?

BUT what would happen if you sent out 100,000 emails? At the same tiny response rate of 0.5%, YOU WILL EARN $77,500.00 OF SPENDABLE CASH IN JUST ONE MONTH!

When you order from Success Masters, you get:
*The best methods for bulk e-mailing and obtaining e-mail lists.
*Step-by-step proven instructions on how you can start a lucrative business selling information & become financially successful.
*Our BEST-SELLING reports on a convenient PC Disk or CD ROM.

There are hundreds of people making this kind of money. AND YOU CAN TOO! Take charge and MAKE THINGS HAPPEN for you. You too can be making $50,000 + a month - living the life those other people could only dream of. Just Click Here
and order today!

Our last testimonial -"I thought it wouldn't work for me either. I held off for 4 months, but I was curious. Then I thought all these people can't all be lying. I had to try it. Since then, I quit my job as a manager of a video store and I currently make over $100,000 a month."-James Cobb from Fort Worth, TX.

For being our first 50 customers, you will receive 5 FREE BONUS REPORTS to help you start making money right away. (Mention Coupon #100)

WHAT ARE YOU WAITING FOR? Order from:
www.successmasters.com

Type in SMARTDATA INC., RCP# 444-444 & Coupon#100, we will rush deliver your disk of Special Reports so that you can START MAKING MONEY NOW!

(When you order, remember to reference six-digit RCP# 444-444 & Coupon# 100. There will be a slight delay in processing & you cannot receive your FREE Bonus Special Reports without this information. Thank you.)

//

If you received this electronic mailing by mistake, please pardon our intrusion.

Dear Friend,

Are you or somebody that you know experiencing credit problems? If your answer is yes, I think you will be very interested in our special offer. No longer will you have to live like a second class citizen due to a bad credit report. Bad credit is caused by a variety of reasons: Health, divorce, termination of employment, loss of income and dozens of other reasons. The bottom line is that bad credit can happen to anybody. There is no specific profile of a person with credit problems. It can happen to doc
tors, lawyers, accountants, the mail man, truck drivers, housekeepers and salesmen. As a matter of fact, one in three Americans live with some form of bad credit. Fortunately, the United States Government has passed many laws under the Fair Credit Reporting Act, all of which protect your rights as a consumer. Our manuals will show you how to use these Federal laws to your advantage and repair or obtain a new credit report.

***** THE FRESH START PROGRAM (TM) *****

Have you seen your credit bureau report lately? Have you recently been denied credit because of a bad cedit report? If you have answered yes, then you need to take advantage of THE FRESH START PROGRAM (TM). THE FRESH START PROGRAM (TM) will guide you through the process of obtaining a BRAND NEW credit bureau report. Our easy-to-follow manual will put you on the fast track to obtaining your new credit bureau report and can be accomplished within 24 hours! Regardless of your credit rating, you can NOW obtai
n a brand new, fresh credit bureau report free of:

* ANY bad credit
* Bankruptcies
* Judgements
* Foreclosures
* Charge-Off's
* Tax Lien's
* Repossessions
* Late pays
* Garnishments
* Inquiries

NOW, you can have a 'Clean Slate' and a 'FRESH START' with a brand new, credit bureau report.

//

***** THE COMPLETE CREDIT REPAIR KIT (TM) *****

Good credit empowers you to qualify for personal loans, business loans, auto loans, credit cards, home loans and other types of credit you may apply for, at the best possible interest rate. As you know, if you don't have excellent credit, lenders will NEVER extend credit to you! The Fair Credit Reporting Act will allow you to legally and permanently ERASE the negative information on your credit bureau file. Anything that is damaging to your credit rating, may be removed:
Inquiries, Foreclosures, Repossessions, Charge-Off's, Late Payments
Student Loans, Bankruptcies and Judgements

The 'Credit Repair' companies located in every city will charge from $500.00 and up to do what our easy-to-follow manual will teach you. Now, in the privacy of your own home, you can repair your own credit at your own pace.

\\\

***** PROOF *****

"Having bad credit was the one thing holding me back from starting my own business. After working your program, I qualified for a $45,000 Small Business Loan. My business is making me more money than I've ever made. Your program is truly priceless!"
George S. - Fresno, CA.

"Thank you, thank you, thank you! Before, my credit was totally trashed. After using your Fresh Start Program and using The Complete Credit Repair Kit, my wife and I qualified to purchase our first home with no down payment. These programs are worth thousands of dollars!"
Kenneth T. - Ithica, NY

"After being laid off, my creditors were not very understanding when I couldn't pay my bills and as a result, my credit was very badly damaged. Once I started working again, I couldn't qualify for any type of credit. After using the manuals, I qualified to buy a new car, with no down payment."
Mr. Fred C. - Tampa, FL

"After my divorce, I was forced to file bankruptcy. I was told my credit would be ruined for 10 years. After using the your manuals, I have great credit again. I even receive pre-approved credit cards in the mail. Thank you so much for your amazing program. I don't know what I could have done without it. I highly recommend your program to anyone who has credit problems."
Ms. Anna S. - Tacoma, WA

2457. Yagi antenna-horizontal or vertical?????

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-09 00:00:00 UTC
From: yaesutom@aol.com
Message-ID: <19970809050401.BAA03476@ladder02.news.aol.com>
Source record: 192174

I might be getting a 3 element, 3 band (10,15,20) yagi antenna. I know that you are supposed to get the antenna at least a half or even a full wavelength above ground. What about mounting it vertically? Then I would think height wouldn't matter as long as you can get it above trees, houses, etc...

So does a vertically polarized yagi antenna work at any height?

2459. Re: Station Identification

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-09 00:00:00 UTC
From: n8blk@aol.com
Message-ID: <19970809001001.UAA12667@ladder02.news.aol.com>
Source record: 192231

In article <5sfdcm$lb3$1@news.ycc.yale.edu>, legere@pantheon.yale.edu
(Ronald Legere) writes:

> I have a quick and easy question:
> When you are using someone else's station, what call do you use for
>identification??? Your call or the owners? Or both? I just dont get
>the dual licsense thing yet :)

You can use your own callsign to identify if you are the control
operator of the station. The owner of the station is in effect
loaning you the use of his equipment for you to transmit. You
alone are responsible for proper operation because you are
the control operator, and the station licensee.

You can also operate as the control operator of the station in
question, and use the callsign normally associated with the
station equipment. Please note that both scenarios require
the permission of the equipment owner. The control operator
and the licensee are both responsible for any misbehavior by
the control operator, and for proper operation of the station.

At one time, one would have had to use the callsign of the
station if operating at the station location, but this apparently
is no longer true. Please note that if for example you are
an extra class licensee, and the station licensee is a general
class licensee, and you operate in a portion reserved for
advanced and extra licensees, you would have to indentify
as Station callsign with your callsign operating to fully comply
with the old rules. It's easier just to identify with your own
callsign in that situation except perhaps for special events
stations and the like. Also, please note that being a tech
as the control operator of a extra class licensee's station, you
still can only operate with tech privileges. Such is life in
the world. I also note that part 97, sections 101 et al
indicate that it is presumed that the station licensee is the
control operator except when otherwise documented, which
usually means a log.

Small + handy program, Address, can fill, read, and organise a
database. You can use it for any topics such as books, customers,
music, car, cd, parts, clients, etc... and makes as many different
databases as you like.
The extended search possibility of the program makes it suitable for
any application where many items need to be ordained and found in a
few seconds.
This program gives you the way to manage your collection of items
whatever their topic. This without the complication of big database
programs. You can start without any specific knowledge on the subject.
you just need a mouse... and visit:

http://www.xs4all.nl/~bernard/adhome_e.html

see you there,

2466. Calling CQ...oh please, oh please...

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-09 00:00:00 UTC
From: hmaxwell@netcom.com
Message-ID: <hmaxwellEEMyIt.KF2@netcom.com>
Source record: 192238

Immediately after obtaining my general license, and while still
required to use a temporary call sign identifier, I enjoyed a good
number of DX contacts using modest equipment (100 watts out of a vertical).

As soon as I stopped using the temporary identifier, responses to CQ calls
stopped almost completely. Yes, the radio still works, although I had
started to wonder. Yes, I've thought about pretending I was newly
licensed forever to solve the problem, but there must be a better solution.
I sure don't know what it is except more persistence than even the
marathon efforts I've made-- should I fake an accent to sound like
an exotic contact? (Just kidding) Thanks for any thoughts.

people> who have said "My first personal is..." Amazing isnt it? That I
might> actually enjoy a conversation with someone who speaks like that?

If some sounds like an ass it is possible they are not.
Why speak abnormally over the air and NOT in person?
Why would someone have a need to sound like that?

> I guess Im not as socially advanced as you Burt, but I try to enjoy
amateur radio for what it is and try not to get so wrapped up in talking
or behaving a certain way on the air.

Actually you are what you say you are not, You are into
behaving abnormally. You are into behaving DIFFERENT
than REAL people.

> Yes, saying "The first personal here is..." or the "handle here is..."
may sound silly but Im not ready to consider someone a JERK as you say
just because they say that.

Of course they MAY not be a jerk just as a person who
smells may not bathe but what are the probabilities?

I it very difficult to communicate with others, it doesn't
> seem like ANYONE is qualified to talk with you on the air.

But I do OK when I talk to REAL people.

> Too bad for you. The rest of us are having such a good time.
> I love the new phrase the high school kids are throwing around,
> I think I'll pass it along.
> "Sucks to be you Burt!"

Never heard that phrase, I guess because the high school kids
do NOT think that of me but I know why you hear it.
Does it make you feel better to put me down?

C O M P L E T E S T A T I O N

I am selling my entire station. See it, test it, buy it.

Icom 751 with CW filters, RC-10 keypad $800

Icom 2KL Solid state 5OO watt amplifier $1300

Icom AT-500 automatic tuner $350

Cushcraft A3 Beam $300

Alliance Ham rotor $100

40 foot crank up tower $300

The prices noted above are how I arrived at
the total, if you strongly disagree, tell me.

All messages answered. If you do not get an answer I did not either get
the message or you didn't.

2473. Re: One Ham's Prediction on Sunspots/Global Cooling

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-09 00:00:00 UTC
From: Mike Flaugher N9LLX <flaugher@thepoint.net>
Message-ID: <01bca4c2$cb19af00$d3a2f6ce@flaugher.thepoint.net>
Source record: 192245
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.misc

When I was in the Air Force, I used to tune receivers which had very wide IF filters. We'd tune with a spectrum analyzer and noise generator. Then, the first time I saw pictures of all 22 sunspot cycles together, I knew I'd seen those patterns before. By studying the diagrams one who had sone this type of electronics work can easilly see what looks for all the world like a multiple-stage filter being tuned. My guess is that there are three separate stimuli involved. But whether three or two, the solar signal which caused the warm-up before and after the Maunder Minimum, and from 1900 to present, is obviously one of the major players. So what I'm saying is based on my "eye" and my intiution, rather than a good statistical series.

By the way, everyone please excuse me for being a bit "outrageous" with my original article. I was just trying' to get somethin' goin'.

It impresses me that Earth has always been able to compensate through feedback mechanisms. What strikes me strange about these global cooling episodes however is that there is a strong correlation between cooling and ocean level drop. One would think the oceans would rise as more moisture is transfered out of the atmosphere. But it has also been found that during solar Minimums the ice fields begin a slow expansion. Surely this is a complex situation, but then I guess it's not out of line to think of more water being transferred into ice during such an episode. That system may be aided by the fact that cosmic ray intensities increase due to the calmer solar wind and inter-planetary magnetic field. Cosmic rays also directly affect cloud cover.

What a fascinating new corner of science this is.

2476. Corrected: A Better J-Pole

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-09 00:00:00 UTC
From: arrow146@aol.com
Message-ID: <19970809155201.LAA19842@ladder01.news.aol.com>
Source record: 192248

Hello to the Group.

Mike Melland, KB9QHU is building the Better J-Pole and
noticed an error I made in the construction plans I Posted.

The length of the angle bracket should be 5 1/2" NOT 5"
The spacing between the elements should be 4 1/2 inches.

Sorry about this mistake, here is the corrected plans......

Here are the instructions for the J-Pole.
Remember, the spacing is important, If you use any material
other than what is shown here, you may have to change the spacing
to get a low SWR.
Please e-mail me, and let me know how this works out.
and let me know if you have any questions.
You may want to print the page showing the J-Poles at....
<A HREF="http://members.aol.com/Arrow146/index.html">Arrow Antenna</A>
or
http://Members.aol.com/Arrow146/index.html

Construction Plans for the Model J146 2 Meter Solid Aluminum J-Pole

Parts Needed:

Radio Shack # 21-961 3/8-24/SO239 Mount (Mobile CB Antenna)
Radio Shack # 15-826 TV Mast U-Bolt Clamp Assembly
About 80 inches of 3/8 diameter Solid Aluminum Rod.
5 1/2 inch piece of strut angle Aluminum 1 1/2 X 1 1/2 X 3/16 Thick.
2 Stainless Jam Nuts 3/8-24 thread

Tools needed:

Drill Press with drill Bits up to 1/2.
Tap & Die for 3/8-24 thread.
Sander or file to de-burr the cut edges.
2 9/16 wrenches & a 3/4 wrench.
Vice-grips

Make sure the piece of angle Aluminum is exactly 5 1/2 inches long.
Drill 2 1/4 holes on one side, centered to fit the U-Bolt for mounting.
On the other surface of the angle
Measure in 1/2 in from each end and drill a 1/4 pilot hole.
This should give you 4 1/2 from center to center of the two holes.
Redrill one of the pilot holes to 11/32 Then tap the hole with a 3/8-24
Tap.
Redrill the other pilot hole to 1/2

Finish as required.

Cut a piece of the 3/8" Aluminum rod to about 59".
Attach a vice-grip to one end.
Using a 3/8-24 Die cut in about 8 threads in the other end.
Screw on the Coupling Nut that came with the SO239 Mount
Tighten as much as you can.
Measure the rod & coupling nut & cut to exactly 57 1/2"

Cut a piece of the 3/8" Aluminum rod to about 21"
Attach a vice-grip to one end.
Using a 3/8-24 Die cut in about 14 threads in the other end.
(If you don"t have jam nuts, cut enough threads for 2 nuts & the thickness
of the angle bracket.)
Screw on one of the Jam nuts & tighten as much as you can.
Measure from the bottom of the nut and cut the rod to exactly 19 1/4"
(Remember the nut must be included in the Measurement.)
(Put a small amount of grease on the threads)
Screw the element into the threaded hole of the angle bracket and tighten.
Screw on the other nut and tighten it.
Attach the 57 1/2" element in the 1/2" hole using the rest of the SO239
Mount.
Mount & test your new antenna. SWR should be < 1.2-1 at 146 MHz and
<1.4-1 at 144 &148 MHz.

This Model J146 is available from Arrow Antenna for only $ 35.
The J146/440 Dual Band with single SO239 feed is only $ 43.
Please add $ 6. Shipping & Handling per order (for US Funds).

Ed, always good to see you in print. I wonder what the statistics of clubs would show. My guess is that a substantial number of clubs are affiliated with the League. You might also look at the number of hamfests organized each year to see how many are sponsored by League affliliated clubs.

My guess is that the most active hams, those that participate in amateur activities, whether on the air or through organizations are well represented in the League. Other hams, non-active in one way or another, are not well represented.

On a slightly different note, I believe the League seeks to gather information from member and non-member alike when ever policy decisions are being formed. Too vote you have to be a member. But you don't have to be a member to be heard, or express your opinion.

I have sat through numerous League Forums. Never have I seen or heard it said that you had to be a League member to express yourself, or have your voice heard.

From where I sit, the League makes a tremendous effort to in fact represent the largest possible faction of hams, whether member or not.

Cheers, Terry

Clark,

Ooops. Forgot to address the main point. :-)

I am not sure I agree that the League is not open to new opinions; rather I think that they get them all the time, and most of them would require more than just a quick "lets do it this way" note to the board and executive committee to implement.

What I mean by that is there are, just like in the "real world" the folks who do the work, and the folks who kibbitz (Yiddish for "to meddle" or offer ad-hoc opinions). The membership, by and large just goes along and rarely, if ever, makes a substantive move to effect change (it's "just" a hobby after all). Every now and then someone not only comes up with an idea, but says: "Here's my idea, and here's a plan to implement it, and I'll take the reins in making it a reality if everyone else will stand behind me." When folks come up with ideas that have well-thought-out implementation plans behind them I think that the League Board listens and acts on them promptly. The VEC program is a good example, even though it was sort of shoved down the Amateur Radio community's throat by the Congressional de-funding of the FCC.

Again, this comes down to involvement. For folks who feel that Amateur Radio is more than just a hobby, there will be a greater involvment, including dedicating some serious non-recoverable personal time. Unfortunatly there's usually more than heat than light in proposals to change the state of the Amateur world.

'Sorry if I sound jaded -- I worked for many years on Wall St. in various capacities before I started my own business. As a VP at a really big Money Center Bank where I ran a very successful advanced technology group (if you search the 'net a bit you'll probably find some articles about me & my work) I discovered that THAT old and rather stodgy organization was slow to change anything, even though everyone complained incessantly about the need for the world to be fixed. The problem? Everyone wanted change, but wanted someone ELSE to make it happen. When I decided to take on the establishment with an idea, a plan, and took the project(s) on myself, the world was my oyster. Among the results were the first firm on Wall St. (in fact the first financial services firm ever!) connected to the Internet, Netscape (I helped fund the development of Mosaic at UofI) and the large-scale commercial use of the Internet we have today. All it takes is time and hard work.

Hi Noah,

You have two possible avenues open to you:

1.) Have a doctor sign a disability waiver on a form 610. You then need not complete the CW portion of testing in order to advance.

2.) Many hams with a hearing impairment build a device which converts the CW pulses to light - you then can copy the code via light flashes. It means learning to copy CW by eye rather than ear. Any ARRL VE group (and I believe the same is true of a W5FYI group) must accomodate your needs during testing, but you need to let them know they will be expected to have a visual - based CW test position for you BEFORE you attend a test session.

Best Regards, and good luck, whichever route you take!

You can use YOURS IF you operate within YOUR license privledges...
IF you wish, you CAN use the station's call...BUT if you operate
outside the STATION OPERATOR's privledges (IE: your ticket is higher
class than theirs) you MUST ID as THEIR CALL/YOUR CALL as in 97.119(d).
If you operate their station outside YOUR license privledge but within
theirs, you MUST use their call AND the operator MUST be present as
control operator...

Clark,

I have never seen any published list of salaries, but they're pretty easy to infer from published material. All one has to do is: 1) look at the job postings on the ARRL web site and see the base salaries being offered; one recent posting for a technical serivces driector to run all the Leagues IS systems was in the mid-20s as I recall. 2)Then, look at the League's budget numbers that are published as past of the executive committee minutes both on the web and in QST.

If the League has ~175,000 members and the annual dues are $34/year, that would be about $5.95MM per year in operating funds. Unfortunately, from an operating cash perspective, some percentage of those members are (like me) Life Members; so they're just a one-time cash hit so the actual annual operating cash inflow is substantially less. But for the sake of discussion, lets assume all of the ALL League members pay annual dues.

The League says that 50% of dues go toward the publication of QST; the rest is for all other League activities. The remaining $2.9MM would then be presumably used for the rest of the League staff, telephones, electricity (including running W1AW for sceduled bulletins at reasonable power output 83 times/week), publications, equipment, insurance, running contests, QSL bureaus, the Web site, running an office in Washington, DC to remind our elected representitives that we are still around and worth the spectrum we're granted, etc., etc.

When you come down to it they do a lot with very little. According to the published board minutes they have also run a deficit for quite a while too. Now, of course, there are other places the League gets funding: Many of its educational programs are supplimented financially by many hams who contribute to various parts of the ARRL Foundation -- but those are mostly directed grants and are not used for day to day operations. There are also some hams who donate directly to the League to support its operations, but that's not a reliable way to fund an operation...

Not necessarily true. I don't know for sure how the League handles
life membership dues, but normally most organizations charge roughly
25x the base membership rate, which, if invested even at 4% annually,
yields annual interest equal to the base membership rate. So, it is entirely
possible the League invests Life member dues, extracts the interest
annually to provide an equal cash flow, and provides a windfall when the
member drops dead (since they never have to touch the principal.)

Thank goodness the "tough requirements" and "accountability" prevent
the horrible interesting types from getting a license. If we were to
lighten up we might end up with something like 14.313.

Dave S.
I have a call sign but why in the world would I use it on the Internet.

2487. Re: 800 MHz Flight Telephones

I'll add some more indecision to the topic:

I don't know if it is applicable or not; but here goes.....

On OSCAR satellites, (amateur radio communications type)
all modes could be used; according to the schedule of the bird
and what mode it was in at the time. The secret was to keep a
set receive frequency and adjust the transmit to offset for doppler
as the bird passed through the communications range determined
by the horizon and your proximity to the angle of the pass.

There are devices made for ham use that not only control the az and el
of tracking antennas, but could also tune the operating frequency to
offset the doppler effect. I am unsure if the altitude of flight is
sufficient
to cause doppler effect sufficient to make straight communications
unreadable.

Don't know if this sheds any light, or widens the gap......

True. It's also a little low for SSB activity (here mostly 28.4-28.5 MHz). However, I'd still say that you'd have better chance of success on phone than CW on that frequency. You could add a 741 mic amp, a NE602 balanced modulator and 3 or 4 transistors to get QRP DSB on 10m.

However, bear in mind that with QRP, crystal control has a similar effect to putting a 20dB attenuator in line as regards the number of QSOs you'll have. With frequency agility you can at least call other stations calling CQ, with crystal control you're stuck to calling yourself, hoping that someone else will hear you. I have some more thoughts on crystal control Vs freq agility on my home page (URL below).

They are AM with very weird channel spacing. I only heard one once and
had to hang out by the airport to do so. I didn't find it worth the
effort. [You don't see anybody using those phones on the plane, do
you?] If anybody wants the freqs, do a follow up post to request
them and I'l dig them up.

First of all, I want to thank everyone that visited my Mars Pathfinder Site, at http://dhcom.com/astronomy/pathfinder.htm. This site continues to do very well, and is updated at least once a day.

We are approaching September 12, 1997, which will mark the next Mars Mission, the Mars Global Surveyor will enter orbit around the red planet. We have posted a site dedicated to this next mission, which you can find at http://dhcom.com/mars. In the next coming weeks, we will begin to update this site with the very latest news, information and photos.

Thanks again for all your visits, and please, let me know what you think of the new site!

Hi all, I have a Kenwood TH-78A dual band Handi talkie that I'd like
to trade. It has 3 battery packs. One is 12 volts at 800ma, one is
12 volt at 700ma and the last is 7.2 volts at 800ma. ALL the packs
are in very good condition, the 12@800 and 7.2@800 are not even a year
old. The radio is an 8 out of 10. It is in excellent working
condition. It has the mods done. It also comes with the manual
and a W&W charging CUP, NO CHARGER. When I bought the radio it had
no charger. I use the W&W charger for another radio.

I'd like to trade for an older 2 meter all mode rig with 25 watts, a
digital display and PL. It should be in good working order and
in nice shape.
A base unit would be great but a mobile is OK.
I will pay cash to balance the deal if needed.
What do you have??

PLEASE READ BELOW
--

NOTE If you want to E-mail me, you MUST REMOVE the NO.JUNKMAIL
in my address. I'm trying to stop the unwanted Junk Mail.
SORRY for the inconvenience but it's getting out of hand.

Always Available through Technology..... UNLESS SOMETHING BREAKS!!

> thing was just as big then as now. Same arguements about The League
> and how the decisions are made. Wanna go back further...? Get a copy
> of "200 Meters and Down" and read about power plays of the 19-teens...

So the ARRL has been screwed up and out of touch for decades ... now tell
me somthing I didn't realize over 20 years ago ...

> 3. To paraphrase Steve Mendelsohn, W2ML, (ARRL First Vice-President)
> who said at the 'Dayton Town-Hall Meeting':
>
> ...The ARRL is just a reflection of what the [ACTIVE] members
> tell the Section Managers, Directors and the Board to do...

Baloney ... the ARRL is a reflection of what the *BOD* wants to do ...
nothing more, nothing less ... they don't WANT to hear from anyone
who doesn't agree with or (heaven forbid) actively opposes their backward
party line ...

> Afterall, we have Cellphones, Satellites and the Internet, who needs
> those Hams when we can sell that spectrum for real $,$$$,$$$,$$$?]

And the ARRL's backward, stagnating, Luddite policies are setting us up
for EXACTLY that outcome ...

> If one doesn't like how the League works, then get involved!

The ARRL is like a corrupt dictatorship ... out of control and yet
with all the power of control (and money from its publishing empire)
... the only viable way to save ham radio is to overthrow the ARRL
and kick them out as the "representative" of ham radio to the FCC ...
given a chance, they'll do the wrong thing practically every time, it seems
..

> The folks who work for League HQ (at salarys that are **FAR** less than
> they could get in the open market)

I'm sorry, but based on the level of technical expertise shown in ARRL
publications and the dismal financial performance of the ARRL over the
recent past, I have to conclude that most of these folks couldn't *get* or

keep a decent job in the private sector because they're not worth those higher salaries ... (this is NOT meant to apply to Ed Hare, who appears to be more of an exception to this rule) ... but many of the "revered experts"
of ARRL publishing "fame" never appeared impressive in the least and were quite consistent in producing articles and designs that were about 20 years behind the times, yet were billed as being rather "wiz-bang high-tech."

SB DX @ WW $OPDX.317P
Ohio/Penn DX Bulletin No. 317

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 317 (Packet, DX Reflector and UseNet Version)
BID: $OPDX.317P
August 11, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N1BB, N1SP, WF1B, KA2D, KC2X, W2UD, WB2YQH & WB2RAJ THE 59(9) DXReport, N3AF, WB3LHD, WA4JQS, AC7DX, EA5RD, G3XTT, G4BUE & DX News Sheet, GJ4ICD, PA3ERC and VE2CND for the following DX information.

9M0, SPRATLY ISLANDS. (The complete news release will be sent to all OPDX InterNet Subscribers as an additional bulletin!) With the activity of two groups being active from here this month, a third group has announced that they will also be active from here. A multi-national group of DXpeditioners, primarily members of the UK's CDXC (Chiltern DX Club), the UK DX Foundation, will operate from Layang Layang Island in the Spratlys in February, 1998. Exact dates will be announced later, but the intention is to operate soon after the island re-opens to visitors following the typhoon season in order to maximize the opportunities for good LF propagation. It is also hoped that sunspot numbers will by then have started to increase, and that the expedition will enjoy favorable HF propagation.
The team is expected to include: G3NUG, G3OZF, G3WGV, G3XTT, G4JVG, G0OPB, K5VT, VK2BEX, 9M2OM/G3NOM and 9M6SU. It is planned to keep four stations on the air round the clock to maximize band openings. All HF bands will be activated on SSB, CW and RTTY. The group will also have equipment for 6 meters. The team will use a wide selection of monoband and multiband antennas including phased verticals for both 40 and 80 meters. The callsign 9M0C has been provisionally allocated. A Web page is available at http://members.aol.com/spratly98 with up-to-the-minute expedition news. G3SWH will be QSL manager, and QSLs will be available through the bureau or direct.

AP, PAKISTAN. Hiro, JA1EZM, is reportedly here until August 19th. He has applied for his own callsign AP2AP. Another JA operator, possibly JA8WPP, may be with him. Most of the activity will be on 160, 80/75, 40 and 30 meters, but if conditions are good, look for them on 20, 17, 15 and 12

meters. Main frequencies also mentioned are 10105 kHz and 7005 kHz. QSL to JA1EZM: Hiro Tabuchi, 242 Kumagawa, Fussa City 197, Tokyo, Japan. Meanwhile, AP2JZD has been active on the 14226 DX net around 1500z.

CARIBBEAN TOUR. Peter/PA3BBP, Rob/PA3ERC and Ronald/PA3EWP will be active from Cap Estate on St. Lucia (J6), from August 21-30th, as J6/PA3BBP, J6/PA3ERC and J6/PA3EWP. They might be active as J68BP, J68RC and J68WP, but they haven't received a confirmation yet. From August 30th through September 11th, they will be active from Pigeon Point on Tobago (9Y4) as 9Y4/PA3BBP, 9Y4/PA3ERC and 9Y4/PA3EWP. They will have 2 stations on the air with activity on 160-10 meters with operations on CW, SSB and RTTY. They will also try to work some Satellite RS-12. Their focus will be mainly on the WARC bands and the low bands for Europe during their grayline. Both locations will have an excellent take off to the US and Europe. A special InterNet Web Page will be setup at the URL: http://www.igr.nl/users/pa3dmh/tour1997.html
This page will contain daily uploaded logs and digital images of the expedition. Special wishes can be sent to Alex, PA3DMH, the Webmaster of this page. They like to make as much contacts as possible, however, THEY DO NOT ENCOURAGE PEOPLE TO WORK THEM DOUBLE! QSLs for all the above callsigns go to PA3ERC, via the bureau or direct to: Rob Snieder, Van Leeuwenstraat 137, 2273 VS, Voorburg, The Netherlands

CY0NCD, SABLE ISLAND (UPDATE). Due to some transportation problems and adjustments, the CY0NCD operation had to start earlier than expected, and by the time you read this the operation will probably be winding down (August 12th). QSL via VA3NCD (bureau or direct and PLEASE consider QSL bureau delays - up to 18 months to receive some cards.) Film materials and pictures will be available upon request to anybody who might wish to see them. (For video, both NTSC and PAL will be available). Inquiries can be sent to Jarek's, VA3CND, E-mail address: jpawlega@perle.com

DOCUMENT #30. OPDX InterNet Subscribers will receive a copy of this document which contains the DXCC 2000 AD HOC Committee Interim Report and Recommendations that were presented at the ARRL's Board of Directors meeting which took place July 20th.

EA9, CEUTA. Frank, EA5RD, and Kim, EA5ND, will be active from Northern Africa September 6-7th. During their activities, they will sign EA9/homecall. They plan to have two stations active on CW/SSB/RTTY on 80-10 meters (in the usual DX-windows). Contacts made with these stations will be valid for the "Spanish Castles Awards", with the reference number CCE-049 and the location will be the Muralla Real. A special color QSL card will be available. QSL via the bureau or direct to homecall signs.

FG, GUADELOUPE. John, EA3CB, is currently staying on Guadeloupe Island (NA-102) and plans to go to Les Saintes Island (NA-114) next. Look for John to be active as FG/EA3CB until August 14th on Guadeloupe and Les Saintes August 15-17th. Activity will be on CW/SSB/RTTY with operations on 40-10 meters (WARCs included). QSL via EA3CB.

FP, ST. PIERRE & MIQUELON. Rich, K2RW, of the North Jersey DX Association is planning a RTTY operation from St. Pierre starting August 14th through 18th as FP5AA. He will be active in the SARTG RTTY Contest August 16-17th. QSL via his home call K2RW.

JD, MINAMI TORISHIMA. "The 59(9) DXReport" states JD1/JG8NQJ will QRT in late September, one month earlier than expected . He is can be found active on 7010, 10103 and 14027 kHz. QSL via JA8CJY.

LIGHTHOUSE ACTIVITY. Look for members of the Great South Bay ARC, Islip ARES and Long Island DX Association to operate from the Fire Island Lighthouse (ref #670, IOTA NA-026, USIA NY-013-S), August 16th and 17th, between 1400-2200z signing W2GSB/p. SSB activity will be on the usual IOTA frequencies, CW will be announced. A special color QSL certificate will be available. QSL via AC2P CBA, #10 SASE please.

MORE 6M BEACON NEWS.....
Steve, KC2X, states the KC4XX beacon on 50.077 MHz is located in Orlando, Florida (EL-98), and is running 2 watts.

Another new beacon was announced in the USA. It is on 50.0628 MHz with the callsign KB6BKN. The beacon is running 30 watts using a 3 element beam pointed at the east.

GB3IOJ/IN89 on 50.065 MHz has just had a new antenna fitted. The beacon now uses the new Alinco "V" antenna.

P4, ARUBA, Ray, WF1B, be active from here September 24-30th and will operate in the 1997 CQWW RTTY Contest this September. He will be operating some SSB before and after the RTTY contest. He has be issued the callsign P40TT. No CW or 160 meters operation is planned.

QSL INFO AND NEWS.....
Ron, WB3LHD, states he has been waiting for a QSL from PY2AEI since Novemeber, 1995. After 3 requests, Ron received a reply from PY2AEI's wife saying that Julio had passed away in 1989. It would appear that the November 1995 operation was a PIRATE.

Les, WF5E, received a letter recently from Abubaker Alzway, the operator at 5A1A, stating that the 5A1A is the only station in Libya working SSB since July, 1995. Any other operation is a pirate operation and they have no permission to operate. Abubaker has returned some 5A0A QSLs as they are no good. He also states any operation from Joe from the Czech Embassy in Tripoli is no good because he has no permission to operate as of this date. He also mentions that he has returned some QSLs from his 5A27 operation where he was the op in September, 1996 (this was in celebration for their 27th Anniversary of the Alfath September Revolution). Les states he is not the QSL Manager for 5A1A, although he might be able to obtain your QSL if you worked Abubaker as 5A1A. Les's E-mail address is: wf5e@startwo.apex2000.net

7Q7EH QSLS. The W1 QSL Bureau is receiving quite a number of cards for 7Q7EH via W1EH. The W1 Bureau states they cannnot contact W1EH and he does not subscribe to their bureau. The GO List shows AA9HD as QSL

Manager, and their sorter has attempted to contact AA9HD, but has failed to elicit any reply. The W1 Bureau cannot handle cards for 7Q7EH. Some list somewhere is in error. To those who sent via W1EH; resend trying AA9HD.

Ron, AC7DX, informs OPDX that he is now the new QSL Manager for contest station ZZ2Z (Cesar py2yp). QSL to: Ron Lago AC7DX, POB 25426, Eugene, Oregon 97402.

T32Z QSLS. Ron, N3AF, informs OPDX that after sending several SASEs, he made a phone call to Janice, N7YL, QSL Manager for T32Z. Janice told Ron she has not received any logs from T32Z in over a year. She told Ron that as soon as she gets some logs she can begin to respond to everyone's QSL requests.

S2, BANGLADESH. The "DX News Sheet" states that Jim, VK9NS, may be active October/November as S21ZA.

SPECIAL EVENT STATION. Look for W4MT to be active on September 6th between 1300-2100z on 20 and 10 meters. The station's activity are in celebration of the U.S. Air Force's 50th Anniversary. Special QSL's will be available via KE4WMG.

SSIDXG NEWS. Tony DePrato, WA4JQS, Director of Operations for the South Sandwich Island Dx Group, released the following: Mark Parrin, N7MQ (ex-N7MCA), legal advisor for SSIDXG, announces that SSIDXG is now Incorporated as a non-profit DX group and all donations are non taxble. SSIDXG would also like to welcome our newest member of the team DR. Frank Weigelt, N0DX. Frank is with the University of Iowa, College of Medicine, Department of Radiology. He will be assisting Jerry, AA6BB/7, in the fund raising operations for the upcoming Bouvet oeration until it is time for his departure as a team member of the DXpedition. With the new tax status of SSIDXG, all donations can now go directly to Jerry, AA6BB/7, and have a positive tax implication for our supporters.
The current Board of Directors of SSIDXG is made up of the following members:
Luis Chartarifsky, XE1L, Mexico City ,DF
Terry Dubson, K6JL (ex W6MKB), Escondido, Calif.
Gary Jones, W5FI (ex W5VSZ), Hattiesburg. MS.
Sam Brown, WA4IUM, Knoxville, Tenn.
Tony DePrato, WA4JQS, Ferguson, Ky.
Jerry Branson, AA6BB/7, Junction City, Org.

Any suggestions on what to use instead of CQ?? Over the years I have tryed
to stay away from the use of the Q codes on phone. I used QRT a lot in the
early days but now it is (call) leaving the air. Seems to work ok...got
away from QTH and just say "location is #####. Never got in the habit of
QSL...I hated that from
my first day on phone...but what can you do to rid my own use of
CQ...Suggestion?? I know , work 100% CW and not worry about it..

Until recently the life membership fee has been amazingly low. When I
became a 'lifer' the
rate was < $500 (I think its $750 now), and the annual dues were $30.
Even at that rate, you're right, the multipler is high (> 15) which is
can be a lot if invested.
Not knowing the intimate financial details of the League budget I am not
knowlegable enuf' to
speculate how much they may or may not make on their investment of such
funds...
but I think with the rate of member increase that seems to be below that
of the increase in
the Amateur population, I still hold to my easlier assertion that they
are doing an awful lot with relatively little...

73,
David

Gee Carl,

You seem very sanguine. I would suggest that if you are *really* upset with the way things run that you carve out some time and try to become a part of the process. If you can get enough of your local hams to agree with you, you could be a section manager and have input at the director's level. If you get even more folks on your side, you could become the next director for your division. It would be hard for the board to ignore you then... get more people still and you could be ON the board, or evtually president of the ARRL.

> > If one doesn't like how the League works, then get involved!

Might I ask what you would replace them with..? I might suggest you start small, there's a lot of work and travel involved in such an enterprise. Are you experienced in public speaking? Have you ever spoken with your congress-person about the value of your hobby..? Have you ever done so just before some representitives of a Satellite TV company or a Cell Phone lobbying group goes in to see that congress-person..?

How exactly would you organize such a national and international group..? What credibility would they bring to the table with which to

discuss why Amateur Radio should even continue to exist with world governments? Would it have relationshiops with similar organizations in over 100 countries around the world? How would it be vetted with the ITU? What kind of programs would it sponsor to ensure the continued growth of our hobby? Would you continue to try to get kids involved in communications..? How would your new organization handle the convergence of communications and computer technologies and their relevance to Amateur Radio?

If you have a credible and well thought out alternative to the ARRL, there may be a market for your ideas. I would suggest though, that that particular fight was over a long, long time ago. YOUR PERSONAL INVOLVEMENT is what is now required if there is something rotten in Denmark (or Newington, as the case may be).

I am confused about this "publishing empire" you speak of. How many copies of the the ARRL handbook do you think they sell each year? The attacks on the league's publishing of information that is useful to Amateurs (including YOU, I presume) seems like sniping. If the content is so bad, feel free to write some better stuff...

Unless you personally actually know the people you are talking about and their qualifications, your comments about the competence or qualifications of the staff or the board are nothing more than a cheap-shot at people who work for a living. That's not fair in this discussion or any other. Attach some hard facts to this argument or back away from it -- it makes your arguements sound petty.

Regarding the quality of the articles: Do you have some better article ideas..? Can you write? CQ, CQvhf and QST are ALWAYS looking for good technical articles from Amateurs who would like to share their ideas with others. If you check out the writer's guide at the ARRL web site or contact CQ publications, I'm sure that the technical editors and all of those publications would *love* to hear from you.

2510. The Real Amateurs Code

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-10 00:00:00 UTC
From: burt2@rocketmail.com
Message-ID: <871262698.23135@dejanews.com>
Source record: 192132
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

The Real Amateurs Code

1) The Amateur is inconsiderate...he knowingly uses the air in such a way as to increase his pleasure at the expense of others.

2) The Amateur is selfish...he takes as much as he can from his fellow radio amateurs, his
local club, hams at flea markets and to the American Radio Relay League, through which
Amateur Radio is represented.

3) The Amateur is stagnant...he uses money to keep his station abreast of science.
It is well built and efficient, the best that his money can buy, even if his family has to go
without. His operating practice is repetitive, never doing anything original.

4) The Amateur is Friendly...slow and patient sending when requested, friendly advice and counsel to the beginner, kindly assistance, cooperation and consideration for the interests of others; these are the marks of the amateur spirit.

5) The Amateur is Balanced...radio is his hobby. He never allows it to interfere with any of the duties he owes to his home, his job, his school, or his community.

6) The Amateur is self involved...his knowledge and his station are always ready to win the latest contest and rarely is involved in the service of his country and
community.

>repetitively chant the
>old mantras and rub mud on the patient. That's the difference between my
>perception of the
>"real world" and yours ...

Why is so much research being done concerning plants that have been
used for centuries as traditionalist medicines and treatments. The
herbs, roots and barks that have been used by tribal 'pejuta wicasa'
(Lakota Sioux for healer) are being found to have much medicinal
value.

The term 'witchdoctor' was coined by the 'technologically-advanced'
who scorned the shamans and medicinemen as being in "the backward
world of superstition". Native American medicinemen praised 'Wakan
Tanka' (the Great Spirit) for providing their ancestors the knowledge
that was passed from generation to generation. The power of Wakan
Tanka was thought to travel through the pejuta wicasa and through his
altar and medicine bundle to help others.

That "backward world of superstition" has provided many remedies that
are in use today. A couple of examples:

Native Americans chewed white willow bark (salix alba as it is named
using a long dead language) to relieve oral discomfort. Have you ever
taken aspirin for pain relief or a heart-related condition?

The purple coneflower plant, Echinacea, was used in the "backward
world of supersition" as a remedy for snakebite, minor skin wounds,
toothaches and sore throats. It has now been found Echinacea prevents
the formation of a bacterial enzyme called hyaluronidase that destroys

the natural barrier between healthy tissue and unwanted pathogenic organisms. Over 180 brand-name pharmacuticals are based upon extracts of Echinacea.

For more information concerning the relationships between modern medicine and the "backward world of supersition" I suggest:

Native American Ethnobotony: Use of Plants by North American Indian People, by Daniel Moerman [Timber Press, Portland, Oregon 1996].

American Indian Medicine, by Virgil Vogel [University of Oklahoma Press, 1970; republished 1990].

Earth Medicine Earth Foods: Plant Remedies, Drugs, and Natural Foods of the North American Indians, by Michael Weiner [MacMillan Publishing, 1972].

Uses of Plants by the Indians of the Missouri River Region, by Melvin Gilmore [1977 University of Nebraska Press].

>
>Carl - wa6vse
>wa6vse@fast.net

The medicinal use of leeches fell out of favor in the early nineteenth century. Now as we are poised to enter the twenty-first century leeches are again being used for medicinal purposes. Ain't technology grand! Your perception of the "real world" appears to be canted based upon the applicability you wish to see and believe, whether its amateur radio or the world of medicine or ...?

"They called us savages, but we have never willingly nor mindlessly destroyed the earth we lived on." - unknown native American

OK, so I'm not an amateur... yet... but I do have an interest, and I do some DXing, and I'd like to know what the appropriate offsets are for most normally-set-up amateur repeaters... 2 meter, 220 MHz, and 440 MHz bands. I think I have the 2 meter band figured out, either up or down 600 KHz depending on whether the output frequency is above or below 147.000 MHz... right? What about the others? Thanks for your kind response.

Hi,

I am interested in learning about the HAM activities in India,
Can somebody help me?

Thanx,

nikhil goel

2517. What do You Think of Radio Shack?

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-10 00:00:00 UTC
From: ny2v_fred@juno.COM
Message-ID: <19970809.215431.14318.0.ny2v_fred@juno.com>
Source record: 192139

I think this was mentioned once before, but maybe from what I read it bears repeating. The original Radio Shack store was in Boston, Mass., and was an independent store. I dealt at that time with Allied Radio because it had a much bigger selection. In any event, right after I moved to Syracuse in 1962, the second Radio Shack store in the nation moved in at Erie Blvd.E. and Thompson Rd. I recall looking at some radio equipment there, but was unimpressed. Parts seemed okay.

The store lasted there only a short time, and LaFayette moved in and did a pretty good number on them, especially selling CB gear at that time. At some point, the Tandy Corp., which was originally Tandy Leather Corp., bought the Radio Shacks and created the chain of stores we know as "Radio Shack" today. You may dislike Radio Shack, but don't you wish you had bought Tandy stock back then???

As a rule, but not exclusively, the pay at Radio Shack is very low. If you want to be a manager, and make it, you will have to move wherever they need you, or, as a rule, you are outa there. If you are lucky (and if the employee is unlucky and can only get a job there after a layoff from an electronics or computer firm), you will find a knowledgable salesperson in a Radio Shack. Most of them know almost nothing about the products -- at least not what we wish they knew. They also charge more for their products than do the stores who sell the nearly-identical items but which, in the hinterlands, may be far less convenient to reach. Here, we have a huge choice, and I can get any part I want from a radio/electronics vendor who caters to repair firms. For all but a few items like 2M rigs, I must mail-order for everything, sight unseen unless I visit a hamfest where a big vendor appears with a truckload of gear.

Those who rail against Radio Shack amaze me. If you do not like the place, or what it sells, or who works there, or how little the latter know, then buy your stuff somewhere else. In this day and age, you may well have to do some driving to reach any of the few remaining stores which handle most every part or device.

Ane observation, which I verified to be true, is that they sell only telephones that resist RFI. See if you can get that kind of equipment elsewhere and have any confidence in the product. I own two R/S 2.5 amp supplies that have literally lasted beyond all reason. I own a 2m mobile from them, and the first one worked only a few days. They sent it for repair, and I was shipped a brand new unit via the store. I have no complaints about their service, and only recently disposed of my very first computers, a Model 1 and a Model 3 converted to a Model 4. I still have a 4P and plan to keep it -it will not die, and makes a pretty decent terminal and also has a good word processor I got for it.

Enough. If you are unlucky enough to have to wear a suit to work and earn the wages a R/S employee does, and never know where they will move you next within their district, which could mean either moving or commuting perhaps 100 miles, good luck in your job search, because I guarantee you will want to search for something more rewarding.

Company: Simmons Corporation
Desk of: Carla Thomas
Subject: phone/fax/online check payment system

Business Owner:

You should consider accepting your customer's check by fax , phone, or E-mail. New banking laws has made this possible.

The same manner in which you accept credit cards by Phone, Fax, and E-mail, you can now accept checks. Instead of asking for the credit card numbers ,you ask for the banking numbers(all the numbers on the bottom of the check).

All it takes is TurboDraft Software, blank checks, a computer and printer.

Only 3 Cents per transaction as opposed to a percentage of the sale when using credit cards.

For complete information and cost, hit reply and type "Checks by Fax"

Carla Thomas

Then you actually have in a sense accepted Radio Shack for what they are, a
convenience store. I have never met anyone in my many trips to RS that
pretended the store was anything else. Then why the vendetta??
> >
> >As for Tandy going after usage of the word "Shack" with regards to
amateur
> >clubs/organizations/operators using it in conjunction with the hobby,
>
> Did I say there were?

I believe you insinuated that they would. I myself find it hard to believe
that they would make such a blatantly hostile stink towards a large segment
of their customers. They were going after a self titled 'smut shack', not
'Ham Shack' --these are not exactly tow of the same. The people at Tandy
didn't become rich by being idiots--I find your paranoia a bit premature.
>
> >Do I believe that Tandy

Well, at least we agree on something.

In a non-legal sense, I have a problem with this.

I'm still not exactly sure why, but that's your business, of course.
>
> >Also, your assertion that Radio Shack does not in anyway market to

amateur
> >radio is completely baseless & devoid of fact.
>
> This is a recent development, Mr. KC0. You havn't been a ham very
> long.

Ahhh, the favorite fall back position of the jaded & cynical amateur operator! Of course, you realize that your assertion here means absolutely nothing & contributes very little to the validity of your contentions....

For your information, Mr. Hradilek, I have been very active in SWL for many years, and I have been in their store enough & received enough of their catalogs to know that they indeed have been marketing to amateurs for quite some time. The big hamfest in town always seems to have a Radio Shack booth, right along with the rest of them. I think perhaps you may have dismissed their amateur efforts out of hand for reasons you have made very apparent in this post & the previous one.

They are merely trying to cash in on the recent boom in amateur
> activity as they did with CB in the 70's.

I'd like to think that's what businesses are supposed to do, take advantage of opportunity when it knocks.

Tandy helped make CB what it
> became, and would love to do it again.

If there was that kind of $$$ in it again, so you & I!! These last statements make it appear that you are more jealous of the Tandy success story (like them or not, you must admit they've done very well for themselves) than anything else.
>
> >Please carry on your personal crusade without invoking the name of the
> >amateur community as being representative of your views.
>
> I do strongly feel that most of the amateur community has a negative
> opinion of Radio Shack.

I & most others view them for what they are, not what we wish they would be. I have heard some of the old time amateurs & SWLers gripe & bitch about RS, yet I always seem to bump into them when I'm there, which leads me to the assumption that they also have come to grips with what the store really is. Therefore, I disagree with this statement as being rooted in extremely unrealistic expectations.

This may have changed with all the new
> Technician licensees, but I have never worked one and therefore don't
> know.

Again, I fail to see the relevance of this & why it changes anything.

My right to post an inquiry on this forum is absolute, because
> this is the Internet. It is the Spammer's that don't belong here.

Ahh, well, we agree on two things here. Yes you do have the right to post in this forum for discussion. yes, we both have the right to carry on a little back & forth on this topic. Yes, spammers should die in a pool of molten lead.

However, please state your opinions as your own, because that's what they are (just as my opinions are mine & mine alone, & I do not pretend to speak for anyone else.)

73 & Good DX,

Sean

2526. Re: More ARRL power grab ... (was Re: ARLB039 ARRL Board ...)

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-10 00:00:00 UTC
From: David HM Spector <spector@zeitgeist.com>
Message-ID: <33ED3FF4.4FECB49A@zeitgeist.com>
Source record: 192182

Ah! What's old is new again. It's amazing how the world goes in great big circles ...decade, after decade, after decade.... ad infinitum.

I just re-organized a lot of my ham radio collection, in particular my copies of QST from the 1920's and 1930's. The whole member representation
thing was just as big then as now. Same arguements about The League and how the decisions are made. Wanna go back further...? Get a copy of "200 Meters and Down" and read about power plays of the 19-teens...

These comments are NOT directed at ANYONE in particular, but perhaps some
food for thought...

1. It's often said that Amateur Radio is "just" a hobby.
2. Those that feel strongly enough about an issue will get involved to effect change with regard to that issue; those that feel less strongly
will not.
3. To paraphrase Steve Mendelsohn, W2ML, (ARRL First Vice-President) who said at the 'Dayton Town-Hall Meeting':

...The ARRL is just a reflection of what the [ACTIVE] members tell the Section Managers, Directors and the Board to do...

There are far fewer active members than INactive ones, and *unfortunately* far fewer League members overall than the total number
of Amateurs in the US.
4. The ARRL is the de-facto voce of Amateur Radio Operators in the US. It has been since 1914. There is no "power" to grab! Whether or not one likes individual decisions of the ARRL, without the ARRL, Amateur

Radio would have been LEGISLATED OUT OF EXISTANCE after WWI (to say nothing of WWII, and during the cold war!)... [And don't think it hasn't been attempted since -- there are several members of the so called new-right who would have the FCC delete Part 97 in a heartbeat.
Afterall, we have Cellphones, Satellites and the Internet, who needs those Hams when we can sell that spectrum for real $,$$$,$$$,$$$?]

If one doesn't like how the League works, then get involved! Show that Amateur Radio isn't "just" a hobby to you and that you're willing to dedicate more than the time it takes to fire off a posting to a newsgroup
or kvetch about the ARRL on the air.

The folks who work for League HQ (at salarys that are **FAR** less than
they could get in the open market) in Newington think this is more than
"just" a hobby. The Section Managers and Directors who dedicate a LOT
of
their personal time do. The RACES and ARES members who spent this
spring shoulder-deep in the North Dakota, Oregon and Iowa floods do;
ditto for the Hams in Jarrell, Tx.

Do you?

73,
David
PS: Yes, *I* do. I'm involved in ARES, and soon RACES; I am writing
some interesting technical articles that (I hope) will appear in QST,
and dedicating a large chunk of me scarce free time to helping bring in
new active prospective hams, and other efforts to ensure that this thing

that is "just" a hobby will help more people not only have fun on the
air,
but help them open their minds and maybe expand their opportunities a
little too... (like it did for me.)

Is your packet radio TNC GATHERING DUST? Then dust it off and try APRS!

Automatic Position Reporting System
Tracking and Data Relay
for Public Service

Welcome to APRS. We hope that you will find this brochure helpful in learning about APRS! Other local users are always available to assist you by answering questions, helping set up equipment and help you find the best applications for your needs!

APRS is a Shareware program authored by Bob Bruninga, WB4APR. No charge is made for use of the software, however a one-time registration fee gets you a validation number, giving you the ability to store an automatic start-up configuration so you don't have to sign-on each time you start the software. In addition, a validated copy will be able to hold six pages of position reports and beacons versus two pages for unregistered copies.

The information contained in this brochure will give you, the potential user, an overview of the capabilities of APRS and will, hopefully, encourage you to join us in the SouthEastern APRS network!

APRS in Western North Carolina
(and surrounding areas)
Local Frequency 145.79 MHz
HF Gateway Frequencies
10.151 MHz LSB

What exactly is APRS?

In a nutshell, APRS is a graphical means of disseminating real-time position information in a "broadcast" format using standard Unnumbered Information (UI) packet frames in an "unconnected" mode. By sending latitude and longitude or grid-square location information, stations are placed on a high-detail map. In addition to actual location, course, speed and altitude can also be included and the object may be tracked by "dead-reckoning" by the program until an updated position is received.

What is APRS used for?

Locally, APRS is used for several purposes: Among them are Weather reporting, tracking mobile stations, and Radio Direction Finding.

There are several automatic weather stations operating and you can set one up yourself for less than $200.00! You can almost always see vehicle mounted stations on the move in our area too.

APRS is used to support numerous events throughout the country. One of these is the March Of Dimes WalkAmerica in Atlanta. GPS Tracker Units are placed on critical resources (Ambulance, buses, Police cars, water truck) and displayed on monitors in various locations for emergency personnel. We'd love to support more events, too!

APRS was used throughout the 1996 Summer Olympics to track TV broadcast camera equipped helicopters and motorcycles. (Please contact N4NEQ for more details on this event)

What area is covered?

Our Regional APRS network covers most of Western North Carolina, North West South Carolina, Western Tennessee and portions of Virginia. The HF gateway on 30 meters allows us to see stations as far away as Haiti and California. Even Hawaii and South America have been seen on occassion. There are numerous Live APRS sites to be seen on the Internet by accessing the following address:

http://www.aprs.net

Do I need any special equipment to use APRS?

NO! The only equipment necessary is standard packet radio equipment (a computer with CGA graphics, a TNC a radio and an antenna!).

Somebody said that I had to have a GPS unit to use this software! Is that true?

NO! While a GPS unit MAY be used, the detail of the maps visible on your monitor is such that any can place himself, or any other object, on the network by merely selecting a spot on the map and using the INPUT MY POSITION command. If you plan to use a GPS unit mobile with a laptop and TNC, you'll need an optional GPS registration number.

Do I need a hard-drive?

NO. A working, MINIMAL, system can be configured that can be run off of a single 720K diskette.

What can I expect to see on APRS?

Once you have logged on to the network, your software will request other APRS stations active at that time to beacon their position sometime in the next two minutes. Objects should begin appearing on your screen fairly quickly. You will see stations with various symbols displayed. Most home stations will appear as a small house, digipeaters will show up as a star (green indicates a WIDE-area digipeater), weather stations will appear as blue dots with white wind barbs.

Can I communicate with others on the frequency?

APRS offers both one-line, automatically acknowledged, messages and a direct station-to-station connect using a built-in terminal emulator..

How does GPS come into play with APRS?

Any GPS receiver capable of outputting its data in standard NMEA-0183 format can be connected into your APRS system directly and the position information indicated by the GPS to the computer will automatically place you on your map. A second method of GPS tracking is also being used: direct interface of a GPS unit to the serial port of your TNC. This creates what is known as a "stand-alone" tracker and enables the user to be tracked without need for a computer or operator intervention! No GPS registration number is required for this sort of use.

What kind of software support is available?

The author, Bob Bruninga (WB4APR), is constantly working to improve the APRS software. Upgrades are released often and once you register your software you merely re-enter your validation number as necessary to save a new configuration. Program upgrade files are available on many amateur radio bulletin boards or through the Internet.

Where is the APRS info found on the Internet?

TAPR (Tucson Amateur Packet Radio) sponsors a Special Interest mailing list called APRSSIG. It works through Email and is free. To sign up, visit TAPR's Web page at http://www.tapr.org. There will be a section allowing you to sign up. Once on the SIG, please monitor the traffic for a few days before posting anything. The folks on the SIG welcome newcomers but would rather you try to solve your problem locally before alerting the whole World.

How do I get on APRS RIGHT NOW??

It's simple! Just pick up a disk here at the hamfest or download the software from a landline BBS or the Internet. Load it into your computer, print off the README files, read and follow them and you should be able to be up and running in short order!!!

How much does it cost?

APRS is shareware. You may use the program without charge, however to realize the full capabilities of the system you should register your software. The registration fee of $29.00 gets you a validation number which will allow you to save a your configuration and eliminates the logon procedure as well as allowing you to plot 6 pages of stations instead of only two. To add a Weather Station, GPS, or Direction Finding system, the additional registration fees are $9.00 each when registered at the same time as APRS.

Welcome to APRS!!! Load it, try it. You'll like it!!! For your copy, ask at the hamfest display or at the end of the presentation!!!

Please direct inquiries, comments or questions regarding WIDE-area digipeaters, nodes and so forth to:

Thank you for reading this,

I have just recently installed Vocaltec 4 and I wish to use my camcorder for video conferencing on Iphone.

Could any users please give me some advise or recommend which video tv card would be suitable for my needs.

I understand Wintv by Hauppauge is recommended but do I need an accelerator card to go with this ?.

What I need is info on the complete package if anyone would be kind enough to help.

Subject: Re: CB
To: HAM-L@VM.EGE.EDU.TR

This "Ham Radio Discussion" is a example of what would happen to Ham Radio
if we lightened up the requirements to be a Ham. Look what happens when
"anomonous" Hams (No call signs seen here) can "operate" on public
frequencys without going through the tough requirements and accountablity
that ham radio testing (code and and theory) affords.
Don HS0ZBG

Burt says:

In other words ham rradio would be interesting?

Frequently I hear hams say, THE name HERE is_____.
How often do you say when you meet someone (assuming your name
is Charlie), THE name HERE is Charlie? You never do that right? After
to do so is so impersonal and asinine that you would not want
to seem like a fool-then why do it on the air? Just because you
are a ham is no excuse not to be personal. Of course you could
really sound like THE jerk of the year by saying, THE first
personal here is Charlie (at least if you are not personal-you are
using the word-albeit it in an extremely impersonal way).
Also why say "here", is your name any different when you are "there?"

Finally why do so many hams have the same last name?
I have heard "Brad By-the-Way", Steve By-the-Way", Fred Steve By-the-Way",
and many more of the "By-the-Way" family.

73 from we here (not there) at K1OIK where THE name are Burt.

To Burt Fisher:

Hello Burt. I'm not a ham but have been following this thread
with some interest, as I have been a SWL since 68 and a CB
/ GMRS op since '74. Have listened to some HF ham stuff and
I understand that arrl is not the only game in town. Unless I'm
wrong is there not an exam group in Texas and another in Belmede
Lakes, Me who does testing?

As to your ongoing comments about H.R. I concur with much of you
observations, as I enjoy a unique perspective of being involved in E.E.
thus knowing the technology, but also not holding a ham licence, so
thus I can provide an "unbiased" observation(s) both live and during SWL
activities of the ham RF spectrum.(s)

Been to a few hamfests and a local ham club meeting. Their sort of like
going to a Unification Church or Scientology meeting. All these curious
people speaking to me about the ham radio hobby like it's something
akin to the Second Coming. One particular guy I chance'd meet at a ham
fest
in Maryland was so glub-damm pushy about ham radio being the best thing
since sliced
bread that he could've also been right at home handing out flowers and/or
Tracts in BWI Airport for Lyndon Larouche or Revrend Moon. Was trying to
speak with other folks and this short geek with 3 radios on his belt and
his
callsign on a stupid hat he was wearing wouldn't shut up or let others get
a
word in edgewise. (his yappin reminded me of a pekeneise puppy on
speed...Yip..Yip..Yip...Yip..!!) Why does ham radio seem to be a natural
magnet for screw-balls Burt? An honest question as I'm dumbfounded here.

Oh well, gettin off the topic. One final comment, you mentioned your
problems
with arrl management and your comments about the R. Palm and L. Hurder
"story". It is my understanding, from ham sources which seem somewhat
reliable, that the outcome between the 2 personages you mentioned was a
result of a 20 meter SSB issue which has been allegedly going on for a
number of
Years. I was told that this situation was becomming an "official
embarasment" to the
arrl and ham radio, and someone had to take the "fall" to save face. For
whatever
is worth. Truth or bs, who knows? I've SWL'd up there myself and will

concur that
it is pretty bad, worse than some parts of CB radio in comparason.

Keep up the postings Burt, there are many more people reading them (and
the
replies) with much amusement.

2536. What real men think of me

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-10 00:00:00 UTC
From: burt2@rocketmail.com
Message-ID: <871221636.24898@dejanews.com>
Source record: 192192
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Lets see....the question is "Would you want Burt Fisher to (be)
teaching your child". Well, I have visited his web page, and read
many of his postings. Burt seems to be a progressive-minded
individual, who is not afraid to raise questions about various
topics and issues, related to the radio hobby and others.
I don't know about you, but some of the better teachers of which
I had the pleasure of being instructed by all had the common
trait of not being afraid to leap beyond the stale material within
our tax-dollar-purchased-to-give-the-publishing-house-a-BIG-kickback
textbooks, and instead taught us how to THINK independently.
One Professor I very much remember would take a current news story
from the local paper and ask our opinions about it, then challenge us to
prove to him, each other and ourselves that what was printed was
indeed the truth, or just another opinion from someone else who
does not have a clue either. In about 80% of the cases, our research
proved that much of what was posted as news, was instead greatly
expounded upon by the writer of the article from the actual events.
Lessons taught: Do not be afraid to ask questions as much of what is
out there is pure bull---t. I see Burt in the same role as my former
Prof.
He seems to not be afraid to raise a question or gore a "sacred-cow"
within the stuffy and stodgy realms of the hobby called ham radio.
It's a darn shame there aren't more people like Burt as far as I'm
concerned, and not only would I welcome him teaching my kids, but
I feel he is qualified to hold a position on the Board of Directors of an
Ivy League university as well. Anyone who would ask questions or
challenge the status-quo in order to attempt to advance the field of
endeavor or study, and teach people to do the same, is a real teacher.

>Ah! What's old is new again. It's amazing how the world goes in great
>big circles ...decade, after decade, after decade.... ad infinitum.

(lots of stuff historical in nature deleted.....)

Very well said! You have a good point. It probably addresses the
original thread very well. The thread had turned in a direction
about the League actually trying to find out what the opinions of
the majority of hams were (regardless of membership, and not just
informal in nature), and that has not been addressed here. It is
in the power of the League, but it does not attempt to do it except
in a very informal way as far as I have seen. So, the legitimacy
of the League as the one "voice" of amateur radio is not really
assured, though it may be the only voice with a certain amount
of, shall we say, power. It is quite an institution as you point
out!

>4. The ARRL is the de-facto voce of Amateur Radio Operators in the US.
> It has been since 1914. There is no "power" to grab! Whether or not
> one likes individual decisions of the ARRL, without the ARRL, Amateur

Well taken point here.

>If one doesn't like how the League works, then get involved! Show that
>Amateur Radio isn't "just" a hobby to you and that you're willing to

This depends on the openness of the League bureacracy to new ideas.
This is something to address, I do not dismiss those who question
the League on this point as lunatics. Many are, no doubt, but many
are not. It is something that could use some discussion.

>The folks who work for League HQ (at salarys that are **FAR** less than
>they could get in the open market) in Newington think this is more than

Wow. Are these salaries published? I had not seen it, and would like
to know about it. If this is true, it would mean something to me.

I don't know about the american amateur radio licencing sytem, but, in
Canada we have a thing called medical discharge. That means that if
you have a medical condition which is preventing you from doing some
part of the exam, eg sever hearing disorder, then the doctor can write
a note to the radio inspector giving you a legitament reason for not
being about to learn the code. However, to be fair to the rest of us,
I believe they, at least, want you to know what the code sysbols are
for each letter etc.
In terms of the use of the code, I don't believe that cw has no
benefit. If you listen to the cw portion on the hf bands you will
find that there is lots of code activity.

I will grant you that there are some amateurs that have no interest in using the code but you should still have the knowledge of it.
In Canada to pass the radio exam you must know the basic principles of packet radio, whether you have the desire to use it or not. Packet has become a part of amateur radio, like cw, and it principles should be known.
cw does offer amateurs an aspect that the other modes don't. I expect that most certificate hunters use cw rather than voice.

In short, if you have a legitament medical reason for not being able to copy cw that is one thing but if you are just can see the point in cw that is another thing.

> > seems
> > ..etc, etc, etc.........

..So here may be some food for thought, or at least a new viewpoint -

I've seen lots of facts and figures presented about how bad the ARRL is, how few actual members they represent, and so forth.

Here's one for you to ponder - In Japan, virtually every amateur belongs to the Japanease equivalent of our ARRL. Look at the numbers - last I saw, it was in the high 90% bracket.

Since I got these figures from ARRL (which means they're as aware of them as anyone), someone tell me this: just what exactly is the Japanease Relay League doing that the ARRL is not? Anything? Or is the ARRL doing more for US amateurs than their Japanease counterpart, with less membership?

As I've followed this thread, I keep thinking about the above - maybe instead of blaming the Newington crowd for all the problems in Amateur Radio, we should look a little closer to home - like in our mirrors. And this is not a flame - I'm as guilty as anyone here. I just can't help wondering what the ARRL would be like with the support of 90% of US Hams - even for a year or two.

- I might have to re-think letting my membership lapse.

73 my friends,

CONGRATULATIONS! I recommend the Radio Shack HTX-202 HT. They are a VERY sturdy, intermod free radio. I'll also recommend you get a 2 meter Ringo Ranger antenna on your roof for much further contacts. Radio Shack always has sales so check with them when it will go on sale. The Ringo new is about $60, around $30 used.

Again CONGRATS!

Kenwood TH-78A with regular charger, 5 watt battery, long life battery, and regular battery. Also included is a 12 volt DC cord, a speaker and mic which make the talkie into a base station. This is a later version of the TH-78A. Book and box included. The radio is in good working order and very clean condition. Frequency expansion has been done for MARS, CAP and beyond. Asking $250 plus shipping included. Contact Anthony at wb5tty@vvm.com . 73 de WB5TTY

> sources tells me that these phones only use either AM or AM/SSB.

The system originally used AM or AM/SSB, but most major installations
are now digital. Note that the ground site(s) are regional and are most
likely not on an airport. In most cases you'll only hear the airborne
frequencies, i.e. an aircraft at cruising altitude (and then only if the
airline is still using AM).

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

800 MHz Air to Ground Telephone [22.1107]

- - Airborne - -
Blk Ch 1 - Ch 29

10 894.0055 - 894.1735
9 894.2055 - 894.3735
8 894.4055 - 894.5735 Guard Band -
7 894.6055 - 894.7735 .x765-.x797
6 894.8055 - 894.9735
5 895.0055 - 895.1735 Control Channels -
4 895.2055 - 895.3735 .x813-.x973
3 895.4055 - 895.5735
2 895.6055 - 895.7735
1 895.8055 - 895.9735

Transmissions are AM (or AM/SSB), and converting to digital.
Channels are spaced 6 kHz apart. A specific block of 29 channels
is assigned to each geographical area. Ground frequencies are 45
MHz lower and do not echo the airborne half of the conversation.
Service is used on passenger airlines.

2549. RF Sniffer Modifications

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-11 00:00:00 UTC
From: Robert Lay <w9dmk@crosslink.net>
Message-ID: <01bca5f9$fb6e97a0$f641f6ce@w9dmk.crosslink.net>
Source record: 192052

In a recent posting I described an RF Sniffer constructed from a few simple components (Telephone modular plug, germanium diode, capacitor) and a Radio Shack Auto Range Digital Multimeter. Since then I have made a small circuit improvement which I would like to describe.

The previous circuit was subject to some fluctuations in the readings for some reason. It was also relatively insensitive to a transmitted voice modulated signal using SSB Mode. I decided that a capacitor and resistor added to the circuit would provide the necessary integration of the signal to give more consistent and easy to read signals and might improve the Sniffer for use with voice modulated signals.

The Circuit as reported in a previous article was as follows:
Positive terminal of meter connects to anode of Germanium diode (such as 1N34) and to a .02mfd capacitor.
Negative terminal of meter connects to green wire of telephone circuit and to the cathode of the above diode.
The red wire of the telephone circuit connects to the other side of the capacitor.

Added circuit elements are a resistor of 1000 ohms and a capacitor of 1000 MF in series with each other and directly across the two meter terminals. Obviously the negative side of the polarized capacitor connects to the negative terminal of the meter.

The red and green telephone circuit wires go to a telephone company modular plug, in order that the Sniffer circuit can be readily connected to any ordinary telephone jack. Length of wires is not critical up to a few feet. I am using a cable of under 2' from the circuit to the modular plug.

I do not have any other measurement data to report at this time but I am still interested in any comments from others who are chasing telephone RFI.

No reason not to. It definitely comes closer to my definition
of what should be posted in an amateur radio newsgroup than
posts attacking other posters.

Well, I hope I am not a heretic for suggesting that the code remain in place....and not because it is just a historic part of the hobby.

First off, it is valuable in times where QRM is so bad, only code can break through. Second, it is valuable for quickly passing health and welfare traffic when the bands aren't "just right". Third, and most importantly, it is a way to "earn" the upgrade.

Now, before I start getting hate mail from those who have the unfortunate problem of not being able to a.) hear the code to begin with, or b.) those with a valid medical condition, I firmly believe in medical intervention. You should not be stuck in the lower levels of our hobby because of this. That being said, we must also take care to watch for hucksters, looking for the easy way out. I am a Technician, studying for the upgrade and I look for-
ward to the challenge of learning the code. It's kinda like the Boyscouts....if we all were advanced to the Eagle, where would the challenge be????

For your consideration,
7-3, Jim KB8TNQ

2554. Re: HELP What is our problem?

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-11 00:00:00 UTC
From: Cathi J <cajjen@access.mountain.net>
Message-ID: <33EED432.58D09FAC@access.mountain.net>
Source record: 192057

Thank all of you that responded for the helpful input regarding
husband's
radio/linear interference with our TV's & VCRs. Sorry I didn't
get back sooner (kid's 4-H livestock at county fair for 10 days).
I enjoyed the input & learned a good bit about interference causes
& cures. In the end, the husband moved his antenna out into the field
about
100' from the house & maybe 20' feet higher than it was on the roof.
This
alleviated the problem with the TVs & VCRs (one TV did blow the power
supply
...luckily the small TV); made the husband feel clever at having "solved
the
problem & now I can talk when I want & not bother you & the kids"; shut
me
up about blowing up the electronics; and made the kids feel a little
sheepish
about not believing Dad knew anything about his radio--"Wow, Dad, moving
the
antenna really did work."
HOWEVER, I saved all of your suggestions & comments for the husband's
future reference, because when the kids hear him talking on _their_ rock
&
country radio stations early in the morning; and hear him talking during
their
phone conversations, I suspect there will be some more complaints...

Thanks again for all your help.

> response.
>
> edarnold@one.net

Lets hope this isnt for the purpose of causeing interferance. Here
goes.

2 Meters <147.00 Shift Down 600 Khz
>147.00 Shift up 600 Khz

70 Centimeters Shift up 5.00 Mhz

220 I'm not real sure about this but I think its down 1.6 Mhz

Sounds to me that you should listen for and reply to CQ's. Folks did
it for you so you can return the favor - and make contacts, too.

COLS COLUMN

DO YOU LIKE TUNING THROUGH THE BANDS LISTENING FOR RTTY SIGNALS?...
I FOUND THIS INTERNET FILE ON THE ARRL WEB SITE, IT MAY BE OF
INTEREST AND SAVE YOU A LITTLE BIT OF SEARCHING.

THIS FILE LISTS THE FREQUENCIES AND TIMES ON WHICH THE ARRL TRANSMITS
ITS BULLETINS. 2300Z AND 0500Z ARE THE MOST LIKELY TIMES YOU WILL
COPY THEM. UNLESS YOU DON'T SLEEP, THEN TRY 1600Z.

THE BULLETINS ARE ALSO TRANSMITTED ON CW, WITH A DIFFERENT TIME
SCHEDULE. IF ANYONE IS KEEN TO COPY THEM CW, SEND ME A MESSAGE AND
I WILL GET THE TIMES AND FREQUENCIES FROM THE ARRL WEB SITE AND
INCLUDE THEM IN A LATER CAST.

73S FOR NOW DE COL VK2CTD.

Bulletins are sent first on Baudot, 45 bauds LSB, followed by 100 baud AMTOR FEC Mode B, and finally 110 baud ASCII, but only if time allows.

UNQUOTE.

RTTY - HOW IT BEGAN - PART 8
BY VK3KF ERIC FERGUSON

In the mid 1960's I was away from home a great deal of the time, including a stint in Europe learning something about what was termed 'telegraph on radio', the forerunner to AMTOR as we know it today, but what a difference in those early valve units as compared to the solid state devices of today. The original TOR complex was housed in two standard seven foot racks, when, today one can pack the whole works into a small suitcase.
O
This meant no involvement in the amateur sphere for about two years, during which time more and more transistorised devices appeared in amateur items. Among those in the forefront of the hard work involved was K8KDC, later to become W6FFC. His earlier version of the 'Mainline' and TTL demodulators had become the accepted standard of valve operated devices, but in the 1979's his ST-3,4, 5 and 6 solid state versions gained worldwide acclaim and was, or should I say 'is' looked upon as the 'ultimate' amateur demodulator, otherwise, why are so many VK3 amateurs hard at work building the ST-6 at the time of writing this. Perhaps it is because they have not heard about the TU9-7 ? Any way, the TUS-7 was never published and the only unit in captivity is in the shack of VX3KF.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(01 AUGUST - 07 AUGUST)

ISSUED 08 AUGUST 1997

SUMMARY
Date 01 02 03 04 05 06 07
10cm 71 71 72 73 75 77 78
A 11 6 14 10 6 5 (5 EXPECTED)
T 15 12 10 20 15 18 13

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH (W.A.) WAS QUIET 1ST TO 2ND, AND 5TH TO 7TH AUGUST; UNSETTLED TO ACTIVE ON 3RD, DECREASING TO QUIET TO UNSETTLED ON 4TH.

MAXIMUM USABLE FREQUENCIES WERE NEAR PREDICTED MONTHLY VALUES
THROUGHOUT THE PERIOD. SPREAD F WAS OBSERVED DURING LOCAL
NIGHT ON 4TH AND 6TH AUGUST.

COMMENT:
THERE WAS A DISTURBANCE OBSERVED ON 3RD AUGUST DUE TO A
CORONAL MASS EJECTION ON 30 JULY. THE DISTURBANCE WAS STRONGER
IN THE NORTHERN HEMISPHERE

FORECAST (08 AUGUST - 14 AUGUST)

SOLAR: LOW. THERE ARE TWO SOLAR REGIONS CURRENTLY
CAPABLE OF ISOLATED LOW LEVEL FLARING.

GEOMAGNETIC: QUIET TO UNSETTLED.

FREQUENCIES: MOSTLY NEAR PREDICTED MONTHLY VALUES. CHANCE FOR
ISOLATED SHORT WAVE FADEOUTS ON DAYLIGHT CIRCUITS.

COURTESY OF IPS RADIO AND SPACE SERVICES

Thursday 31
The calm after the storm, no reports.

NOTES OF INTEREST:

INDIA, VU. Special Event, Pai, VU2PAI, will be active using the callsign VU2PAI/50 until 31 September to commemorate the 50 years of India's independence. QSL Box 730, Mangalore 575003,

INDIA. Pai is an avid stamp collector, any (new/old) stamps are welcome to his collection.

KUWAIT, 9K. 9K6POW will be a special event station in remembrance of the 'Kuwaiti's POWs' during the Iraqi occupation of Kuwait. They will be on the air from 1-3 August. Possibility for RTTY. This will be the first time 9K6 prefix will be on the air, maybe the last. QSL 9K2RA.

PAKISTAN, AP. Stations in Pakistan to begin using the special prefix AP50 to celebrate their 50th anniversary of independence. Special certificate will be available.

SPRATLY, 9M6. Before his DXpeditions to Spratly and East Malaysia, Bob, N2OO, will be in St. Croix with his XYL Beth, KF2BQ, until 31 July. Bob/N2OO, Bob/N0RN and others will be using the special callsign 9M6HIL to celebrate the grand opening of the Hillview Gardens Resort (5-24 August). Activity 40-10 including WARC bands, CW/SSB and RTTY! During their stay (14-18 August), N2OO and N0RN will be going to Layang-Layang Island (Spratly) for a sidetrip with 2 rigs, 2 beams and antenna for 40 meters. RTTY is planned. Call will be 9M0OO or 9M6OO. QSL 9M6HIL, 9M6AAC and 9M?OO via N2OO.

UGANDA, 5X. Mats, SM7PKK, currently active as 5X1Z, states that many continue to QSL to his old address from the CallBook. This address is wrong. QSL only to: Mats Persson, Zenithgatan

24 nr5, SE-212 14 Malmoe, Sweden.

The VK2SG RTTY DX Notes can also be found on the Internet
at reflector digital-dx at st.rim.or.jp and the OH2BUA
Webcluster at URL http://www.clinet.fi/(tilde)jukka/rtty.html

ARLD033 DX news

This week's bulletin was made possible with info provided by
The 599Rpt, Tedd, KB8NW, the OPDX Bulletin, The Daily DX, the
DXNL, 425 DXnews and Contest Corral from QST. Thanks to all.

MALAWI, 7Q. Eli, IN3VZE, will be QRV as 7Q7CE on 20, 15 and
10 meters from August 2 to 25. QSL to home call.

OMAN, A4. A45XL is active from Masirah Island, IOTA AS-014.
QSL via G4VUO.

GRENADA, J3. IV3ZJR, with IV3NVN and IV3TMV are QRV as J38AH
and J38AI, respectively, until August 21. They will put
emphasis on the newer bands. QSL via IV3TMV.

SVALBARD, JW. Jack, JW0M, is QRV from the Polish Academy of
Science. QSL to PO Box 35, 80-325 Gdansk 37, Poland.

MIDWAY ISLAND, KH4. Ted, NH4/NH6YK, is QRV on 10 and 6
meters. He will be here until August 20. QSL to home call.

EASTERN KIRIBATI, T32. T32Z is QRV and has been found on 15
meters around 0230z. QSL via N7YL.

ZIMBABWE, Z2. Cedric, N9YXA, is part of a communications
convoy here and will be QRV as Z2/N9YXA from August 3 to 21.
He can be found on 40 to 10 meters. Some RTTY operation is
planned as well. QSL to home call.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065
Australia, for such matters as membership and general
enquiries. Enquiries can also be made by packet to the
President (Col) VK2CTD at VK2WI, or the Secretary (Pat) VK2JPA
at VK2WI.

2565. AP2AP is Slim

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-11 00:00:00 UTC
From: K0HB@usa.net
Message-ID: <871327786.3726@dejanews.com>
Source record: 192068
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.misc,rec.radio.amateur.info

The following is transplanted from the internet DX reflector

- - - - - - - -

The Pakistan Amateur Radio Society (PARS) advises all radio
amateurs that the call "AP2AP" being used by JA8WPP
and/or JA1EZM is a fake. No such call has been issued
by the licensing authorities to anyone and these "Amateurs"
have no permission to operate in AP temporary or otherwise.
There has been no change in local licensing regulations.

PARS requests all amateurs to discourage this type of piracy
by not responding to CQs or QSO requests from this fake call.
Such activity can only be detrimental to the genuine hams in AP.
The operator should also be advised that it is known that he is a pirate.

ARRL & JARL are also being informed by copy of this notification
so that QSL cards from this station are not accepted for any awards.
This is in addition to any legal or punitive action the local authorities
may take against the operator/s for illegal operation of a transmitting
station under the relevant laws.

Sent on behalf of PARS
by Tariq/AP2TJ.

>on route to Kourou for launch?
> Ken K5MBV
>

Unfortunately Ken, Phase 3D is not going anywhere anytime soon. It is still under construction in Orlando. The ESA wanted Phase 3D in Kourou August 10th, but that didn't happen. So now, in place of our satellite, the ESA wants us to ship them the Phase 3D mass simulator (a concrete block), and they will launch that into space in place of our satellite.
What this all means is that AMSAT paid the ESA over a MILLION dollars to put a block of concrete in orbit. If you donated any money to the Phase 3D project, then you got screwed by the ESA (just like the rest of us.) The truth is that we don't know when P3D is going to be launched or even what rocket it will be riding on. If I sound pissed... you're right.

73 de KB7ADL
Vince

P.S. There is still a possibility that Phase 3D could be launched on 502, but that possibility looks remote at this time.

2567. International Reply Coupons (IRC)

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-11 00:00:00 UTC
From: cfmyers@aol.com
Message-ID: <19970811213501.RAA10734@ladder01.news.aol.com>
Source record: 192070

Here are a couple of questions that I hope somebody will know the answer to:

1. In the USA, I can redeem an International Reply Coupon (IRC) for US$0.60 in stamps which is good for an airmail letter to anywhere in the world. I have heard that this does not work the same in all countries because some countries have "graduated" postage rates. I suspect this means the country has a different airmail rate for nearby countries and a higher rate to far-away countries, and that they redeem the IRC at the lower rate. Is this correct?

2. If #1 is true, doesn't the Universal Postal Union (UPU) frown on this practice? I thought an IRC was supposed to be good from any UPU-member country to any other UPU-member country.

3. Again, if #1 is true, is there a list somewhere which shows all of the countries where one IRC is not enough to cover postage.

Thanks for any information.

Hi Vern,

There is no fee for amateur radio license renewals.

Obtain FCC Form 610 and submit in accordance with the instructions.

2569. -Emmetsburg IA Tech Help Please

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-11 00:00:00 UTC
From: jim@rst-engr.com
Message-ID: <33ef6483.3515871@news.gv.net>
Source record: 192072

On 26 July, a tornado ripped through the little airport at Emmetsburg IA (EGQ) taking out a hangar, four wonderful airplanes, and the unicom antenna.

RST can't do much about the hangar or the airplanes, but we volunteered to give Keith and Bev (the airport manager / owners) one of our unicom antennas. It needs somebody on the other end to put it together and help install it. I also need some idea what kinds of connectors and lengths of coax cable to send along. The place was in sort of a shambles when I went through there last week and I didn't get a chance to scope out the cable requirements.

Any volunteers would be surely appreciated. Please post or email your address and I'll be happy to get back to you. This message is also going to be crossposted to rec.aviation.*.

Jim

Of course this all depends on where you are. There are a lot of places where the band plan has -5MHz offst for 440 repeaters. And there a number of 2M repeaters in this area below 147 MHz the use -600KHz.

And I would HOPE that he is asking because he is trying to learn about the stuff. If this guy had claimed to be an licensed there would have been a number of people here saying, "How'd you get your license without learning that?" And since if not licensed the same people would likely say things like, "We aren't going to tell you since you are probably bootleging or something."

I am not surprised that the FCC received several el applications from individual amateurs. I noticed that when I sent my electronic app that the server would slow way down and it did not look like it was sent, no confirmation received, that kind of thing. I worked for about an hour in

between netscape lock ups and crashes to try to get the app sent. Finally, I received a confirmation number after the 4th try, but I wonder how mayn of the 4 apps the FCC actually got. DId anyone else have problems with sending it?

2580. Surplus accesories going cheap!!

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-11 00:00:00 UTC
From: zs6hz@global.co.za
Message-ID: <33ef258d.19668380@news.global.co.za>
Source record: 192083

I have the following surplus stock available for immediate shipping
from our store in Johannesburg, South Africa:

Part Indiv.
price

Alinco:
18 x EJ-7U Tone squelch unit @ $ 25-00
4 x EJ-15U 200 memory unit @ $ 15-00
5 x EJ-20U Tone squelch unit @ $ 25-00
14 x EJ-17U CTCSS unit @ $ 25-00

Daiwa:
3 x U66H HF remote sensor for NS-663 meter @ $ 25-00
6 x U66V VHF remote sensor for NS-660 meter @ $ 25-00

Hy-Gain
1 x QK-710 30/40m add-on for Explorer-14 @ $ 100-00

Kenwood:
1 x AT-450 Internal ATU for TS-450s @ $ 180-00
20 x BT-8 battery case for TH-28/78 etc. @ $ 7-50
1 x CK-18 WARC bands coil kit @ $ 10-00
1 x FC-10 frequency controller @ $ 5-00
1 x IF-10A interface for TS-711/811 etc. @ $ 15-00
1 x IF-10B interface for TS-940 etc. @ $ 15-00
1 x IF-10C interface for TS-140 etc. @ $ 15-00
2 x SWC-4 remote coupler for SW-200 meter @ $ 20-00
10 x TSU-3 CTCSS unit @ $ 15-00
5 x TSU-4 CTCSS unit @ $ 20-00
1 x TU-7 Tone unit for TR-751 etc. @ $ 30-00
1 x TU-8 Tone unit @ $ 30-00

All equipment is surplus stock from our store, and is unused, in
original packaging, and undamaged.

All of the above prices are individual prices, and they do not include
postage, freight charges etc. Prices are in US Dollars. Payment can be
made by Visa or Mastercard, personal cheque, or wire transfer. The
total value of the above list is $ 2060-00. I am willing to accept an
offer of $1800-00 for the whole list of equipment.

Please e-mail queries to:
zs6hz@global.co.za
or fax at +27 11 444-0459

All of us who donated to P3D knew, or should have known, that we were supporting the development of a very high risk project. I think that it will eventually be launched. But will it work as planned. Again a high risk. If it doesn't there will be lots of people who will say we should have done something else that they just KNEW would work. Second guessing.

Vince, you have made your point so many times. Your attitude is not helpful and if I may say so is kind of immature.

It is a pretty good rig for the money (usually less than $600 used) I have
used mine for about 4 years both at home and as a mobile. You can expect
to get more power output than specified (mine runs in the 125 - 140 watt
class on most bands) I chose the 250 cycle CW filter for mine and it
works great, but in retrospect I wish I had the 500 cycle filter and
sometimes the 250 is too narrow. I have had zero problems with mine. Like
Ron, I got this a few years after haveing the 735. Unlike Ron, I wish I
had the passband tuning and and notch filter (hi). I think that the
receiver on the 725 is a bit better than the 735 overall though and seems
to be more sensitive in the 10 meter area. I do not know if you can still
buy the AM/FM board for it.
All in all a nice little (literally) radio.

Hello all,

I am looking to purchase a Uniden HR2510 or HR2600. Must be in VERY good condition and have a manual.

I am also searching for a manual for a Realistic HTX100 transceiver, or at the very least the pinouts for the microphone plug.

Thanks for reading & 73,
Tim

Assuming you filed Day 1 of Gate 3, it won't be until the 16 of August
until the FCC processes the apps.

Hamradio (in my case, SWL'ing the ham bands) is very interesting and
fun Burt. When I'm servicing a VCR, Com-puter or Industrial PLC on the
benchtop in the evening, I'll set my reliable little Drake SW-8 to LSB and
check out the ongoing radio war(s) between 3.894.5 3.898 and 3.910 MhZ.
(frequencies subject to change of course, dependent upon the blood/alcohol
content of the main participants) Another fun spot is 3.950 MhZ LSB where
one may hear general talk from a somewhat "right-of-center" perspective.
This activity invariably draws in all kinds of curious comments from other
stations
apparently located in the western half of the Country, most of which are
peppered with eloquent speeches, and classic Anglo-Saxon vocabulary used
by the common man to describe the various acts of sexual procreation
between humans, non-humans and visa-versa, in bothe the conventional and
esoteric genere. (parents...don't let the kids near any radio tuned to
3950)
There is one chap on there who has a penchant for playing old style Sousa

marching tunes. I'll say this for him, whoever he is, he has one heck of a signal with the best audio fidelity i've ever SWL's on a single sideband. This guy should be working for a broadcast station in their engineering department.
Finally, for you late nite engineers and insomniacs, there's 3.853 MhZ. A classic collection of Southern good ole boys who, in all sincerity, are quite
amusing and witty to listen to. Sort of like going to the old barber shop on the
corner for a haircut and some good conversation on anything and everything. They have their "fleas" also, one being some guy in East Tx who likes to get
ass-slap drunken on the air, who sometimes uses the most amazing collection of the Seven Deadly Words in a slurred and slobbering succession which is really incredible. You can almost smell the stale beer and sloe gin vapors from
the speaker. So you see Burt, ham radio does have some "interesting" spots on the dial, if one knows where to look.

Hi Charlie,

-I don't currently have any IRC's to check, but yes, essentially you got
it right. The "fine print" on the back of the IRC says something about
it's equal to "one unit of postage". And that's why there is no kick from
anywhere - every country has a right to levy their own postal rates. Some
countries need the equivilent of 2 or 3 IRC's to cover their airmail
rates.

I don't believe this is the rip-off it might at first appear to be.
Technologically unadvanced countries may have a tough time getting
flights in and out of the country, etc.

Anyway, there are several sources of info re: how many IRC's to send for
each country. I use the "N6JR's SECOND OP" card, which tells (by call
prefix) the location, continent, country, beam headings, and postage
rates (and # IRC's) for each country. They also make the N6JR ELECTRONIC

2nd OP for the PC.

Try contacting Radio Amateur Callbook Inc. 925 Sherwood Drive, Box 247,
Lake Bluff, IL 60044.

73, DE N1RUI Jim

I'm looking for suggestions on where to have my new QSL's Printed. The last person I used for cards was "Brownie", I believe they are located in Allentown, Pa I'm looking for a fiarly simple card calls on one side, info on the other, but I wanted it printed on very high quality gloss stock (none of that flimsy paper).
Any suggestions on who to contact would be appreciated.
Also, is Brownie still in business?
Who sends samples?
Thanks,
Jack

If you have a vanity call, then it will be $50.00 U.S., or whatever price the cost of such a call is when you renew. If you have a systematically assigned callsign, then the cost is thirty two cents for the stamp to put on the envelope to mail in the form to 1270 Fairfield Avenue, Gettysburg, PA

Clear Case 1952 Hallicrafters Radio:

This rare and unusual radio is pictured on the cover and on page 170 of Chuck Dachis&#65533; book &#65533;Radios by Hallicrafters&#65533;. The clear case was used to show customers the new printed circuit board being used in the ATCL series of radios. Chuck Dachis assigned the model number CPCR-1 since it was not a production model. This particular radio came from a dealer in Portland, Oregon and the original pamphlet is still with the set. It is in extremely fine physical and working condition. Send your purchase bid to: Rog42@aol.com.

>CQ...Suggestion?? I know , work 100% CW and not worry about it..

The voice equivalent to CQ is "Hello All Stations" (honest!). If you tune
across the maritime HF SSB frequencies, that's exactly what you'll hear.
Or, listen to channel 16 in the VHF marine band - your local coastal
station (usually a USCG facility) will say it.

Sometime in the late 70s while I was still in the Coast Guard, the ITU
made the change from "All Stations" to "Hello All Stations"; no one
liked saying that - sounded kind of corny, but ITU dictated everything
we said over the air. (Other changes they made were for the Urgent and
Safety preambles: Old Urgent was "Pan Pan Pan, All Stations, This is ...",
New Urgent became "Pan-Pan Pan-Pan Pan-Pan, Hello All Stations, This is ...",
Old Safety was: "Security Security Security, All Station ...", New Safety
became "Securitee Securitee Securitee...")

Attention Arizona Hams!

AzHam is a mailing list (reflector) open to all radio amateurs residing in Arizona (or just interested) for the purpose of enhancing communication throughout the state.

AzHam is NOT allied with any club or organization, but is open to members of any/all such clubs (not required).

News (like Arizona Science Center updates or other) of local interest is welcome:

* Hamfests
* Upcoming Meetings
* Gossip
* Elmering
* Coordination
* Emergencies, assistance
* Hams, Experimenters
* Newbies, Wannabees

We will tolerate some amount of sell/swap, but that is not the intention.

The mailing list is provided by Al Waller K3TKJ at no cost and I (K7ON) do the administrivia (grunt work, and ever so humbly I might add).

To join, send email as follows:

TO: majordomo@qth.net
SUBJECT:
BODY: subscribe azham

Please direct any questions to: k7on@qsl.net or k7on@qth.net

Please spread the word to as many folks as you can!

The following is a QST

Ham radio searches to two missing girls and Milwaukee hams face a new restrictive tower ordinance. This, because the city council can't tell the difference between Amateur Radio and CB. These stories and more on Newsline report number 1043 coming your way right now.

(*****

OHIO MISSING CHILDREN SEARCH

Ham radio has been assisting in the search for two missing children in southern Ohio.

On Wednesday, July 9th four year old Cody and eleven year old India Smith were playing in the yard of the family farm house south of Urbana, Champagne County, Ohio.

The children's father looked out the window about 1:15 PM and saw them playing. That was the last time the two children were seen.

A bit later, when the children's father went out to summon them inside, they were gone. A hasty search of the grounds reveled nothing. At 4:30 PM a call was placed to the Champagne County Sheriffs Office. A search was begun immediately with no results.

The search area widened over the next two days and neighbors, volunteers, local law enforcement officials and even the FBI were involved.

On Friday, July 11th the Ohio District 3 Amateur Radio Emergency Services Coordinator was contacted to provide amateur communications. The search teams were spread out over an area of ten square miles. And teams could be out of touch for up to two hours at a time.

For the next three days, approximately 45 amateurs from Montgomery, Miami, Champagne and Clark Counties provide voice and ATV communications assistance.

The Dayton Amateur Radio Association communications van was used several times as a restricted access conference center for law enforcement officials. And the Miami County Amateur Radio Club communications van was used as a media center for announcements to tv stations from Dayton, Columbus, Cincinnati and to the national media.

Over the three day search, teams roved on foot up to four miles from the family farm house. The American Red Cross handed out over 2500 bottles of water to volunteers as they scoured the area in the summer heat.

When the search area was laid out on a map, every building, farm field, creek, river, railroad track, and woods in a ten square mile area had been searched by humans and tracking dogs.

The disappearance of Cody and India Smith has been reported nationally on television and in the newspapers. As we go to air, the two little girls have still not been found.

HAM FOILS PRISON ESCAPE

Thomas Sorrow, KE4ITN, of Cleveland, Alabama, has been recognized by the Alabama Department of Corrections for confiscating electronic parts and schematics for a transceiver from an inmate. The inmate, serving a life without parole sentence for capital murder, was plotting to escape from the maximum security St. Clair Correctional Facility at Springville, Alabama. Sorrow, an Extra Class licensee and correctional officer employed at St Clair, credits his hobby for his being able to identify the contraband and to assist in foiling the inmate's escape.

CB MIXUP GETS HAMS STUNG BY NEW MILWAUKEE ANTENNA ORDINANCE

Milwaukee, Wisconsin hams are on their way to having to live with a new and highly restrictive antenna ordinance because the city council cannot tell the difference between CBers and hams. This according to Scott Frakes, KB9PRG who tells Newsline that on July 25th, the City of Milwaukee Common Council passed the restrictive measure aimed in part at taking 11 meter Class D CB operators off the air and sent it on to the Mayor for signing.

The new law will require a Special Use Permit, and a hearing before the Board of Zoning Appeals for a tower to be erected. The law will cover any tower and antenna that is over the maximum height limit of 40 feet.

The ordinance also increases setback requirements, that would in many cases preclude even getting a Special Use permit. It also has provisions that the proposed tower must not be a deterrent to the area. There are other provisions, many aimed at commercial towers.

But here is the CB related kicker. As said, the new law was not only aimed at limiting the number of commercial towers in the city. The council also wants to put an end to CB interference to consumer electronic equipment.

In years past, amateur radio towers were specifically exempted in Milwaukee. However, the committee that this ordinance came out of was also talking about interference problems with CB radio operators, and made reference to the fact that this might get rid of CBers as well. So they took out the exemption for amateur radio, thinking that this was for CB radio.

What hams in Milwaukee will be able to do to educate their legislators at this late date remains to be seen. Its also not known if existing towers and antennas will be grand fathered under this new Milwaukee tower law.

(Via KB9PRG, others)

(*****

WATCH YOUR TOWER LEASES!

Meantime, if you have a repeater at a commercial or broadcast site, listen up. The July 21st edition of Broadcasting & Cable features an article entitled 'The DTV Push Is On for 1998." In it, Ira Goldstone, the Vice President of Engineering and Technology for Tribune Broadcasting was asked about tower space issues in terms of locating the newly required DTV antennas. Goldstone says that Tribune "will lighten tower loads as leases run out."

The implication is that FM stations and probably most other sub-letters -- including ham radio repeaters may find themselves without suitable tower space so that tower owners can accommodate the needs of Digital TV.

As previously reported, tower space at all commercial sites will soon be at a premium. This as broadcasters have to more than double their transmitter facilities to accommodate Digital Television while also maintaining their old analog signal for years to come.

AMSAT-NA PRESIDENT SPEAKS OUT ON LATEST P3D DELAY

AMSAT President Bill Tynan, W3XO, has spoken out on the latest delay in the launch of the Phase 3D ham satellite. As reported last week, the European Space Agency has informed AMSAT that it will have to increase the structural integrity of the new ham satellite to be certain it survives launch. This last minute notification has brought cries of righteous indignation from a growing number of AMSAT North America members. Members who say that it was wrong of AMSAT to pin its hopes for a launch with one agency.

But in a letter to Bruce Paige, KK5DO, and posted to the AMSAT North America Bulletin Board, Tynan takes the offensive. He says that last minute adjustment in requirements such as those made by ESA are not unusual in the space and missile industry. He says that he encountered many such changes in his thirty-six years as a guided missile engineer.

Tynan adds: "It is not a matter of poor engineering, or bad faith, on their part. It's merely that sometimes these things happen when the state of the art is being pushed."

As to when Phase 3D will be launched. Tynan will not comment to a specific date. Instead he says that at this juncture everything is only speculation which he will not enter into. Instead he notes that all negotiations with ESA are in the hands of Dr. Karl Meinzer, DJ4ZC. Meinzer is the P3D Project Leader.

Tynan says -- and we quote -- "We can only hope that Dr. Meinzer will be successful in arranging something suitable for a launch if we are not able to go on 502."

In closing, Bill Tynan, W3XO adds simple prayer. He says: "Keep the faith!"

NO BANKRUPTCY DELAYS

Outgoing FCC Chairman Reed Hundt has taken a slap at the legal profession. Hundt has urged Congress to make it crystal clear to those he calls "even the most ingenious, pettifogging, persevering lawyers" that provisions of the Bankruptcy Code "are not applicable to any FCC license for which a payment obligation is owed. As such, declaring bankruptcy does not relieve any licensee from payment obligations, and does not affect the Commission's authority to revoke cancel, transfer, or assign its licenses." So says Reed Hundt of the FCC.

PACKET COURSE OFFERED IN TROY

The Troy, New York Amateur Radio Association will host a new "Introduction to Packet Radio" course on Saturday and Sunday, September 27 and 28. Both sessions of this course are free and will cover the basics of packet operation, including station setup, basic commands, TNC parameters, node networks, bulletin boards, computers, software, and operating courtesy. A working station will demonstrate packet's capabilities and limitations.

All students will receive free copies of IBM compatible packet software along with the course workbook. For more information or to register, contact Stephen Anderman, WA3RKB, evenings after 8:30 PM Eastern time at (518) 664-6809.

AMATEUR RADIO AND THE INTERNET

More repeaters are adding linking worldwide on the Internet. One of the latest is Washington, DC's Green Mountain Repeater Association. Green Mountain is not only connecting their repeaters 146.61 and 146.88 MHZ to other repeaters around the country but to hams worldwide as well.

According to Murray Green, K3BEQ, the linking of amateur radio to the computer world is a slow process that will take time for some of our amateurs to accept. He says that the repeater to internet connection may not be as revolutionary as the explosion of repeaters in the 70s. It is however quickly becoming another method of extending the range of repeater transmissions. This, for amateurs to explore, use and enjoy in the best interests of amateur radio and public service.

(Via K3BEQ)

IRC ARES/RACES CHAT NET

The ARES and RACES Internet Relay Chat Net is held every Sunday morning at 10:00 hours Pacific Daylight Time. Anyone can log onto it from most any Internet Service Providers, worldwide. For more information go to the net web page at:

www.kennerla.com/ares

(Via Press Release)

(*****

ARRL WANTS YOU

If you have a project that you would like to share, then QST magazine wants to hear from you. The League publication is looking for project articles ranging from the simple to the complex, covering every aspect of Amateur Radio. To submit an article for consideration, simply send it to:

Paul Pagel
ARRL
225 Main Street
Newington, CT 06111

(Via ARRL)

(*****

ARRL TO HELP RECRUIT KID HAMS

The ARRL Board will soon be introducing a program to coordinate enlisting local volunteers from League affiliated and special service clubs to introduce young people to technology through Amateur Radio and to

potential careers in technology. In creating the program, the ARRL Board cited the increasing importance of technological literacy and President Clinton's call for greater volunteer efforts on behalf of youth as reasons for the project.

(Via ARRL)

(*****

EQUIPMENT THEFT

A Canadian ham club has been robbed of its station. On the morning of June 26th at about 3 AM the emergency command post of the COBRA Radio Club, of the Niagara region was broken into by thieves who made off with a good portion of the clubs equipment. These radios were used for A.R.E.S and CANWARN communications work. If you have any information about the equipment please contact the Hamilton Region police.

(Via RAC)

(*****

DX

In DX, CO2OJ reports that winds in excess of 120 kilometers per hour have taken down his six and two meter yagi antennas. Oscar says that he also has a damaged mast but hopes to have his antenna system back up and working as soon as he can.

(Via CO2OJ)

And the ARRL is looking for signal reports of its 20 meter W1AW Bulletin Service. A change has been made to the W1AW 20 meter bulletin antennas. W1AW needs signal reports from amateurs who listen to its 20 meter transmissions. Please note your QTH, the time of reception, mode, signal strength and quality. Use the standard RST system if you can. Mail your reports on a postcard to:

W1AW
225 Main St
Newington, CT
06111

You can also e-mail them to:

w1aw@arrl.org

(Via ARRL)

And Hawaii has been heard and worked from California on 2 meters. Gordon West, WB6NOA, describes the contact:

"KH6HME, our Hawaii contact in Hawaii on Mauna Loa, drove up to the top of the 8500 foot operating station. Turned off the beacon, and came on the air. About 50 hams throughout southern California were able to work Paul

direct on 2 meters on 144.170 MHz. And we even heard some Hawaii repeaters coming through on FM as well."

Gordon adds that SSB appears to provide the most reliable communication for Southern California to Hawaii 2 meter DXing.

(Via WB6NOA)

(*****

DELETE THIS REALLY HOT NUMBER

Bob Gonsett's CGC Communicator tells the story of a lady in Bloomington, California who called the fire department to obtain earthquake information. She was given a California Office of Emergency Services 800 number to call, but what she got was not exactly what she was expecting.

It seems that the California State OES once had an earthquake hot line at its temporary Pasadena Disaster Center. It was discontinued about 1 << years ago. And since telephone numbers are in short supply, the telephone company reassigned the number to what only can be described as a truly HOT line!

(Via CGC Communicator)

: >to the Japanease equivalent of our ARRL. Look at the numbers - last I
: >saw, it was in the high 90% bracket.

Actually, the numbers are very different than what you described above.
These are the latest figures I have seen from the JARL.

Year # Amateurs Licensed members of JARL

1995 1,325,527 186,310

1996 1,350,127 166,602

1997 ? 158,208

From this data, it seems that ARRL is doing a much better job of
attracting and keeping members than JARL is. As a matter of fact,
out of Japan, Germany, England and the U.S., ARRL is the only
society that is growing and keeping membership.

I am selling a brand new Radio Shack 2M Mobile unit, model HTX-242, cat#
19-1126. This unit only been turned on to be sure everything is fully
function. I anticipated getting my Tech License but have been unable to
motivate myself to do so. My attention is being focused on SWL. The price
is $200.00 and I will pay all shipping cost. I will accept Money Orders,
Bank Check, or sned COD if you prefer.

The fallacy is that in Japan, there are something like
a few hundred thousand hams. People can apparently hold multiple
callsigns, and don't have to renew - they hold them until
they die.

Can someone confirm this?

It recently came to be that I needed a keypad, a power supply and a relay for a simple door entry system. So I went to Radio Shack and commented that the parts deparment was looking a bit skimpy. The sales drone replied that they carried alot of parts. Yeah, if you want to order it from national. I told him that I consider an item carried if I see it on the shelf, otherwise it doesn't exist.

WE need to find out the real situation here. Lets look into this and
find out what mode they really are using now, and what the output power
is.
I have scanned the range many times and have never found an active
frequency.

What is the mode of in-flight phones?

What is the spacing?

What is the power level from the plane?

Are the frequencies still the same?

From: wy491@freenet.Victoria.BC.CA
Message-ID: <EEs2K8.G5I@freenet.victoria.bc.ca>
Source record: 191967

TRANSCRYPT INTERNATIONAL INC signed a letter of intent to acquire E.F.JOHNSON COMPANY, a privately held company with 1996 revenues of $79.3 million. Transcrypt went public in January 1997 and had 1996 revenues of $13.8 million. The letter of intent contemplates the acquisition of substantially all assets and the assumption of certain liabilities of EFJ for total consideration of $34 million. Among other terms, the proposed acquisition calls for total consideration of about $34 million to be paid in cash or debt assumed at closing. However, in connection with the letter of intent, Transcrypt and EFJ have entered into arrangements that include Transcrypt providing a $2 million letter of credit and EFJ entering into a licensing agreement providing Transcrypt with certain intellectual properties of EFJ as the first step toward acquiring substantially all of EFJ's assets.

As with most acquisitions, approximately 20% of the acquired company's employees will be handed pink slips by the acquiring company.

As most of us already know, EFJ has not been active in the ham radio arena for years. This, I guess, is the final nail in the coffin for them.

You must of operated in Korea...Let's see...What call do you want? Ah it's not been used for a few years...Let go try it out on the radio...Well the DX'ers like it so if you want it ...It's yours...Take the paper work and fill it out when you get to your new unit...Have fun with you new call and license....It was great operating in Korea.
Now as far as getting your vanity call goes...Guess it all depends on how much money the FCC has to spend on it's employees that day....Vanity calls are like QSL cards ,we want it right now, but we all know we have to wait and wait and then wait some more...Have fun

> value.

My analogy was, perhaps, poorly chosen ... while it is possible that many
"traditional" remedies may, in fact, turn out to have some measurable
medicinal
value, it can be clearly and conclusively proven that modern methods are
far more
efficient and robust than the ancient ways of the beepers ... Morse Myths
and
mantras notwithstanding ...

Since you brought up the American Indian analogy ... despite their respect
for the land
and traditional ways, the Indians were certainly quick to pick up on the
concept that
guns beat the hell out of bows and arrows and tomahawks ... right??? It's
too bad
that the beepers can't see get past their quasi-religious hang-ups and

recognize the
similar superiority of modern methods and devices ...

> spoken with your congress-person about the value of your hobby..?

Actually I have ... I've also been on a first-name, have lunch when I was
in
town, basis with several FCC bureau chiefs in the past ... what's your
point?

> How exactly would you organize such a national and international
> group..?

It would not be up to me to unilaterally make those decisions ... I think a
new group should be formed via something akin to the Constitutional
Congress,
not by an individual or some small clique of "good old boys" ...

> What credibility would they bring to the table with which to
> discuss why Amateur Radio should even continue to exist with world
> governments?

Its credibility would have to come from membership numbers and giving
true representation to those members, not the sort of back-room good old
boy politics that the ARRL BOD dishes out ... like when they tried to
hood wink all the local and regional frequency coordination groups into
believing that the *FCC* was insisting on a "single point of contact" and
they just happened to be in the process of negotiating an agreement with
for a power grab with a "national frequency coordinating body" ... such a
screw job ... the BOD climbed into bed with a bunch of long-time frequency
coordination egomaniacs and to hell with everyone else ... Mr. Haller of
the
FCC denied that it was the FCC's initiative ... it was Newington's ...

[snipped a few more details that anyone with an ounce of sense
knows would have to be addressed ...]

> I am confused about this "publishing empire" you speak of. How many
> copies of the the ARRL handbook do you think they sell each year?

Lots ... but the handbook is probably small potatoes compared to all the
licensing guides, and just the advertising income from QST ... it's a BIG
business ...

> The
> attacks on the league's publishing of information that is useful to
> Amateurs (including YOU, I presume) seems like sniping. If the content
> is so bad, feel free to write some better stuff...

I am not impressed with the content or quality of the League's publications
..
even QEX, which is *supposed* to be the technical journal, is generally
lousy
and ridiculously elementary ...

> > > The folks who work for League HQ (at salarys that are **FAR** less
> > than
> > > they could get in the open market)
> > I'm sorry, but based on the level of technical expertise shown in ARRL

>
> Unless you personally actually know the people you are talking about and
> their qualifications, your comments about the competence or
> qualifications of the staff or the board are nothing more than a
> cheap-shot at people who work for a living. That's not fair in this
> discussion or any other. Attach some hard facts to this argument or
> back away from it -- it makes your arguements sound petty.

I'm talking about visible performance ... the publications are poor, the
content is elementary (even when it's *supposedly* "highly technical")
and the organization is apparently in financial troubles (losses the last
2 years, I believe ...) that's not a cheap shot ... those are publicly
visible
facts ...

> Regarding the quality of the articles: Do you have some better article
> ideas..? Can you write?

I spent a period of time as Managing and Technical Editor of a nationally
circulated, BPA-audited technical magazine ... during my tenure, we were
nominated for a WPA "Maggie" award in the category "Most Improved
Technical Trade Journal" ... yes, I think it's safe to assume that I can

write ...

> CQ, CQvhf and QST are ALWAYS looking for good
> technical articles from Amateurs who would like to share their ideas
> with others. If you check out the writer's guide at the ARRL web site
> or contact CQ publications, I'm sure that the technical editors and all
> of those publications would *love* to hear from you.

Yeah, right ... QST turns away anything that's "too technical" for it's
appliance
operating, contesting, wallpaper-chasing audience ... the ARRL is so
"committed"
to technical things that QEX wasn't even published for 6 months or so ...

I'm sorry ... the ARRL has ZERO credibility and virtually zero competence
as
far as I am concerned ... we desperately need something new, better, and
workable ... care to participate in a Constitutional Congress??? I can't,
won't,
and wouldn't presume to do it on my own, but I'll participate ... will
you???

Jeff,

This guy O'brien makes me want to puke everytime I read one of his ignorant redneck postings. I am glad that we have the time-distance thing going for us here. Gives us all time to cool off a bit before getting physical. I bet that he wouldn't be acting this way in public, because some other redneck would end up killing him! Jail is full of folks who have proved this time and again. People like O'Brien feel that they have nothing to lose, only to find out that they have everything to lose

Remember the stories from the 70s where one redneck tracked down and killed another after getting some sort of argument started on CB. Well, what are newsgroups except the CB of the 90s? I certainly do not wish that sort of thing on O'brien, but stranger things have certainly happened. James, please be careful in your postings, because there are some folks out here that are bigger, badder, and crazier than you, and they may not practice the same level of self-restraint that the rest of us do.

With all that said, do you think that this whole stupid thread will ever end? I guess not, with us feeding in to it all the time!

Folks,
I performed two mods on my FT50.

1) removed the solder blob
2) removed the resistor.

I believe these are two separate mod in that one is MARS/CAP and one is freeband or somesuch.

Does the hex editor mod accomplish both (e.g. open up transmit across more bands (like marine) and enable things in the 800Mhz range? Is the software mod and the two mods I mentioned above identical?

If so, where are the instructions for the software mods? I may need to modify another radio.

I have a question. I haven't been active in ham radio for about the last 5 years but I'm still interested in renewing my license (it expires in 1999). Will the FCC give me any advance notice that my license is about to expire or will I have to take the initiative myself? Can I renew right now or do I have to wait until 1999? Where do I get FCC form 610?

I had the opportunity to be present in a ground site once, and it was ACSB (amplitude compandered sideband). If a tech wanted to check an off air signal with limited receiving equipment, as being he totally forgot almost everything from the shop, he would best do it in AM. Hope this helps.

Dale

Hi,

My company sends me to business trip to Austria (Wien) and Germany (Munchen, Munster and maybe Nurnberg), and I would like to use this opportunity to buy an handheld ICOM IC-T7A (or european version T7E).

But, I don't have any fresh copy of CQ-DL or some other ham-radio magazine, so I am not so familiar with the current pricing od this radio, and where it could be found for less money.

By this message I would like to ask, most kindly, if someone could take a look at ham-radio advertisements, and send me by mail some price information of that radio (in DM) as well as address (fax nr.) of ham-radio store where it could be bought.

Thank You very much in advance!

Slobodan, YT1RVS

2637. Digest of Articles - QST May 97 (Long - 36k)

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-12 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <5spph6$1qd@news1.infinet.com>
Source record: 192018
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the May, 1997 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub/hamradio/arrl/infoserv/digests
(in Europe) ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:A Skyhook for the '90s
Author>Daso, Don - K4ZA
Source>QST May 97, pp. 31-33
Abstract>Baloons made for advertising uses make excellent supports for LF antennas in Field Day, or other temporary installations.

Digest>Balloons, shaped like small blimps, are in relatively common use for advertising purposes. Such a blimp, of 10- to 12-foot (3.3- to 3.7-m.) length and 3- to 4-foot (0.9- to 1.2-m.) diameter can easily be used to support a vertical antenna for temporary use, such as in Field Days. K4ZA has successfully used them, and in this article, offers the benefit of his experiences for others who might want to follow his example.

A balloon of such size, when filled with helium, will provide a lift of about two pounds, ample for a quarter-wavelength wire on the 160-meter band. The balloon should be tethered in the center of an open space of such size that the perimeter is at least as far in all directions from the tether as the length of the antenna. For safety and good results, one should select an area of relatively flat ground with no buildings, towers, trees, fences, or overhead wires within it.

The balloons are commonly made of polyurethane film of 2- or 3-mil (50- to 75-micron) thickness. The film is relatively strong but must be protected from puncture. The author suggests laying a 20- by 20-foot (6- by 6-m.) tarpaulin around the tether where the blimp will be inflated, to protect it from twigs or sharp weeds.

The tethering line should be 100-pound test fishing line or 1/8-inch (3-mm.) nylon rope. Stranded wire or aluminum welding wire is light and amply strong for the radiator. A good quality ball-bearing swivel should be used to attach the tether to the balloon's halter, since the wind will cause it to turn, pitch, and roll in all directions. Gloves should always be worn when the blimp is being launched and retrieved. In all cases, one should avoid dangerous situations, such as operating near power lines, in wet or stormy weather, or near airports or areas congested with people. Do not attempt to use heights greater than a simple quarter-wave monopole. Finally, remember that an adequate ground system is at least as important as the antenna; use either four elevated, or up to 60 ground radials for best results.

Two suppliers of these inflatable blimps are: Toy-Tex Novelty Company, 7315 N. Linder, Skokie, IL 60077, tel (847) 673-6600; The Blimp Works, 156 Barnes Airship Drive, Statesville, NC 28677, tel (704) 876-6705; web www.msmall.com/blimp.

Title>TA2:An Ultra Simple W1AW Receiver
Author>Kitchin, Charles - N1TEV and Murphy, Mike - WB2UID
Source>QST May 97, pp. 34-35
Abstract>Describes a simple, single-frequency regenerative receiver for reception of W1AW broadcasts.

Digest>W1AW, the ARRL station, broadcasts code-practice, as well as news bulletins of interest to radio amateurs, via CW at 3.5815-mHz. daily. This article describes a simple and inexpensive single-purpose receiver for use in receiving those broadcasts.

The receiver is a simple regenerative circuit, reminiscent of the earliest days of amateur radio, converted to modern components. Its active elements are transistors, a germanium signal diode, and an IC audio amplifier.

The construction project is suitable for a beginner. The total cost of parts is of the order of $10, or less. Alignment adjustments are simple and require no measuring instruments.

A schematic diagram, complete parts list including suggested sources, and photographs, are included.

Title>TA3:A PIC-Based Digital Frequency Display
Author>Heckt, Neil
Source>QST May 97, pp. 36-38
Abstract>Construction information for a digital frequency counter useful with almost any radio receiver. Uses a new IC chip containing counters and a frequency-offset circuit for superheterodynes.

Digest>Practically all modern commercially-available receivers and transceivers contain digital frequency counters and display. Integrated circuit components for building digital counters are also inexpensive and commonly available, but adapting them for use with older radios or for new construction by amateurs has been difficult because of the problem of frequency-offsets in superheterodyne systems. Now an inexpensive microcontroller, Model PIC16C71, is available that can be combined with a digital LCD module and a level converter module to form a counter and display system with adjustable frequency offset. The combination forms a digital frequency display (DFD) that can be adapted to practically any radio.

Complete construction information is presented in a schematic diagram, parts list, and instructions. Only about a dozen passive components are required in addition to the three ICs. Adjustment is straightforward.

A complete kit of parts, including the etched and drilled PC-board, programed controller chip, and crystal are available from: Almost All Digital Electronics, 1412 Elm St. SE, Auburn, WA 98092, tel (206) 351-9316, e-mail:neil@aade.com for $52.95, including domestic shipping. Payment can be made by Visa or MasterCard.

Title>TA4:High-Efficiency Class-E Power Amplifiers - Part 1
Author>Lau, Eileen - KE6VWU; Chiu, Kai-Wai - KF6GHS; Qin, Jeff - KF6GHY; Davis, John - KF6EDB; Potter, Kent - KC6OKH; and
Rutledge, David - KN6EK
Source>QST May 97, pp. 39-42
Abstract>Describes construction of a high-power Class-E RF amplifier. It uses cheap switching transistors and gets very high power-conversion efficiency; usable for CW, FM and digital modes, but not AM or SSB.

Digest>The Class E amplifier principle was invented about 25-years ago by Nathan Sokol - WA1HQC and Alan Sokol - WA1HQB, father and son. It is an exceptionally simple power amplifier that uses inexpensive switching transistors to produce high power output. Conversion efficiency from DC to RF is of the order of 90-percent, so high-power output requires relatively little heat dissipation in the transistor. A modest-size heat sink is adequate with no fan required.

The key concept in the operation is that the transistor operates in one of only two states: on and off. When it is off, no current flows; when

on, the internal resistance is only of the order of 1-ohm! Exciter power required is quite low, regardless of power output; the output is determined wholly by the power supply voltage, not the excitation.

From the principle of operation as described, it can be seen that the amplifier is limited to modulation modes that cause the carrier to be either full-on or full-off. Consequently, it is usable for CW, FSK, and FM, but not for SSB or AM transmission.

The article gives full construction details for building two amplifiers, one rated at 300-watts output and the other at 500-watts. Both amplifiers use the same circuit; the only differences are the transistors.

An equivalent circuit diagram in the article illustrates the principle. It contains an on-off switch to represent the transistor. A power supply is shown with an RF choke in the power lead. The switch shorts this to ground at the RF rate and an L-network couples the output to the unbalanced load, i.e. the antenna.

The actual schematic diagram is nearly as simple. The only additional complexity in the actual circuit, compared to the equivalent circuit, are three inductor/capacitor circuits for removing harmonics and spurious signals. No variable tuning capacitor is used; fixed capacitors and coils wound of No. 10 insulated wire are used.

The 300-watt amplifier uses an IRFP440 and the 500-watt unit, the IRFP450. The former sells for $8.00 each, the latter for $11.00. Both are made by International Rectifier Company and are the only ones recommended by the author.

A package of amplifier parts, including the PC-board, components, connectors, heat sink and chassis, is available from Puff Distribution, Dept. of Electrical Engineering, MS136-93, CalTech, Pasadena, CA 91125. The price for US orders is $50, for foreign orders, $60. For further information, contact Dale Yee by E-mail at: yee@systems.caltech.edu

In the next (June 97) issue of QST, Part 2 of the article will describe the power supply, keying and tune up.

PRODUCT REVIEW (PR)
Conductor: Rick Lindquist - N1RL
Sr. Asst. Technical Editor

Title>PR1:ICOM IC-756 MF/HF/VHF Transceiver
Author>Swanson, Glenn - KB1GW
Source>QST May 97, pp. 63-68
Abstract>Performance review of ICOM's new transceiver. Its performance is near to that of their best model, but at a significantly lower price.

Digest>The new IC-756 is not quite the high end of ICOM's line, but its performance is not far from it. It is a smaller package and uses, to advantage, a kind of front-panel LCD display screen to provide great flexibility, both in information readout and also control-button functions. The screen is about 2-inches high by 3-inches (51- by 76-mm.) wide, and a row of function buttons runs down the left side and across the bottom, adjacent to the screen. When operating modes are switched, the display screen changes accordingly, and each of the function buttons takes on a new task which is explained by the legend on the display.

The rig covers all bands from 160- to 6-meters. It includes such niceties as an automatic antenna tuner active on all bands. A very strong plus is the fact that the tuner is active in receiving as well as transmitting. The added selectivity that this provides greatly enhances the receiver performance, as measured by the ARRL Laboratory.

Other functions provided are: dual antenna ports, a connector for a separate receiving antenna, a built-in electronic keyer with memory, adjustable CW pitch control and tracking sidetone, twin passband tuning, more than 100 memories, alphanumeric memory naming, four types of scanning, a hand-mike with up- and down-buttons, digital signal processing (DSP), and many other features. Most of them have been available on the top-of-the-line IC-781 and are now available at a substantially lower price.

Most of the information that one could want about the operation of the transceiver is shown on the LCD screen, such as the frequency setting on each of the two VFOs, which of them is in use by the transmitter, memory number and stored frequency, which filter bandwidth is currently selected on each of the two IFs, and even a clock with 24-hour format. Received signal strength is shown by a separate analog S-meter.

Among the information displays available on the LCD screen is a "Spectrum Scope", which is a kind of spectrum-analyzer display showing the multiple signals across a significant portion of the band in use. The reviewers' opinions were mixed about its utility. Weak signals below about S-4 do not show, at all; only really strong signals show adequately. It is probably of little use in contest work, but may be handy in searching across a nearly inactive band.

Provision is made for optional IF filters in both the 9-mHz. and 455-kHz. IFs. Either SSB or CW filters can be provided, and switched in or out during operation, but both types cannot be installed in the rig at the same time.

In introducing the IC-756, ICOM has not repeated the specious claim the company made for an earlier model, that the presence of DSP makes IF filters unnecessary. They are properly treating DSP as an adjunct to, not a replacement for, IF filtering. The DSP system provided does an excellent job in noise reduction and in eliminating multiple carriers during SSB operation, but its performance in the "Audio Peak Filter" did not meet unanimous approval by the reviewers. The DSP system is also

used in transmitting and allows each operator to optimize the frequency response for their own voices.

The manufacturer's list price for the IC-756 is $2760. The PS-85 DC power supply adds $325, and the optional IF filters range from $106 to $199, each.

In addition to this review article, the ARRL Laboratory offers a comprehensive test report on the IC-756. Copies are priced at $7.50 for ARRL members, $12.50 for non-members.

Title>PR2:Japan Radio Co. NRD-535D HF Receiver
Author>Wolfgang, Larry - WR1B
Source>QST May 96, pp. 68-71
Abstract>Review of a high-performance receiver designed for short-wave listeners (SWLs).

Digest>The NRD-535D is a high-performance receiver designed for the Short Wave Listener (SWL), or for monitoring purposes. It is the fourth generation of such receivers made by Japan Radio.

It contains many of the features common to modern transceivers: triple conversion; AM, FM, SSB, and CW reception; selectable AGC; IF bandwidth control; wide, (6-kHz.), "intermediate" (3-kHz.), and "narrow" (1-kHz.) IF filters; variable notch filter; noise blankers (2); memories; scanning; squelch; synthesized local oscillator; digital frequency display; and an RS-232 port for computer control. In addition, it offers "exalted carrier, selectable sideband" reception for AM. Optional CW filters with 300- or 500-kHz. bandwidth are available at extra cost.

The reviewers found the unit to be a pleasure to use for broadcast listening. It also would be a good backup receiver for amateur use. Its performance "compares favorably with some of the transceivers popular with DXers and contesters", according to one reviewer.

The manufacturer's list price for the NRD-535D is $2029.

TECHNICAL CORRESPONDENCE (TC)

Title>TC1:Modifying the "Slant-Wire Special" for More Gain
Author>Christman, Al - K3LC (ex-KB8I)
Source>QST May 97, pp. 74-75
Abstract>How to add parasitic elements to a ground-mounted MF vertical monopole antenna, thereby converting it to a switchable-direction 3-element beam.

Digest>K3LC authored an article in Vol. 4 of the ARRL Antenna Compendium under the title "The Slant-Wire Special". In it, he showed a simple way to add four parasitic reflectors to a ground-mounted vertical monopole antenna to form a directional array. Only one reflector was used at a time to aim the main lobe in the desired quadrant. The reflectors were selected by grounding the one in use at its base, leaving the others open circuited.

Now, the same author has discovered how to use any of the wires as either a director or a reflector, so the antenna becomes a 3-element beam. For operation on 160-meters, the length of each slant-wire parasitic element remains 133.5-feet (40.7-m), with the bottom end located 90-feet (27.4-m.) from the base of the monopole. When directly grounded at the far end, the wire is a reflector; but if it is grounded through a capacitor of 2621-pF. (at an operating frequency of 1840-kHz.), the wire becomes a director.

Adjusting the value of the capacitor will affect the forward gain and the F/B ratio, in a trade-off manner. Tuning for maximum forward gain will provide about 6.5-dBi. at a take-off angle (TOA) of 22-degrees, but the F/B will only be about 11-dB. F/B can be maximized to about 15-dB., but that will reduce the forward gain by about 0.5-dB. The letter contains computer plots of the radiation pattern in both azimuth and elevation. A table showing gain, TOA, and F/B as a function of the capacitive reactance at the base of the director is also provided.

Title>HK1:Fast and Easy Printed Circuit Boards
Author>Link, Steve - KJ4UU
Source>QST May 97, pp. 72-73
Abstract>How to adapt an old HP plotter for drawing "resist" lines directly onto the foil of PC-boards for etching.

Digest>KJ4UU adapted an old Hewlett-Packard Model 7475A plotter to draw "resist" lines directly onto the copper foil of PC-boards in preparation for etching. Then he used a software CAD package, called EasyTrax, with his computer to create the layout.

Plotters were quite popular ten or twenty years ago, and are now often found for sale at hamfest flea markets for low prices. The EasyTrax package, which originally sold for $495, is now available for free downloading from its publisher: Protel Technology, Inc., at the World Wide Web address: www.protel.com/download.

The only modification required to the plotter is to adapt a Staedtler LumoColor 318 permanent-ink drafting pen to fit into the reservoir of a Hewlett-Packard plotter pen. He found that the outer diameter of the drafting pen fits snugly into the inner diameter of the plotter pen

reservoir so, after cutting both to the appropriate length, he pressed the one into the other and the combination worked well.

The author reports that he has made several boards using the system, and has gotten uniformly good, but not perfect, results. He points out that after the ink is dry, but before etching, it is easy to inspect the pattern and correct any mistakes by hand.

Title>HK2:Faster Packet with the Uniden HR-2600 Transceiver
Author>Wheeler, Tom - N0GSG
Source>QST May 97, p. 73
Abstract>How to adapt an HR-2600 transceiver for use in packet mode.

Digest>The Uniden HR-2600 is a popular transceiver for 10-meters, only. They are often available for relatively low prices at hamfests, and work well in most respects. However, for packet use, the receiver recovery time is too slow. N0GSG has discovered the modification necessary to reduce the delay time constant to make it usable.

In addition, it is necessary to readjust the receive- and transmit-frequencies so that they are precisely the same. In his letter, he includes step-by-step instructions of how to make the adjustments properly.

NEW HAM COMPANION (NHC)

Title>NHC1:The Doctor is IN
Author>Various
Source>QST May 97, pp. 52-53
Abstract>Questions and answers primarily of interest to newcomers to amateur radio.

Digest>Questions discussed in this issue include: working amateur satellites from boats at sea; operating mobile radios in very low temperatures; "cookies" on the World Wide Web; the Q-factor in tuned circuits; international travel on ocean freighters; encouraging new hams; and other matters.

Title>NHC2:Twister, a la Antenna!
Author>Taylor, Terry J. - W5JFM
Source>QST May 97, pp. 54-55
Abstract>Hints for selecting, installing and using antenna rotators.

Digest>In this article, W5JFM gives some general hints about antenna rotators; how to select them, install them and use them. Among the details discussed are how and when to use thrust bearings; the effects of wind loading; the need for brakes to prevent the antenna from moving in the wind; waterproofing any holes in the roof or sides of the building where the station is located; and other matters of a practical

nature.

Title>NHC3:The Bent Dipole
Author>Mullani, Nizar A. - K0NM
Source>QST May 97, pp. 56-57
Abstract>Shows that full-length antennas can be erected in space only half as long, with negligible loss of performance.

Digest>Many ham stations are located on plots of ground too small for full-size antennas on the lower bands. It is a well-known fact that a dipole can be strung in a straight line for part of its length, with the ends bent horizontally at right angles one or more times with little, if any, degradation of its effectiveness. In this article, K0NM addresses the question of bending the ends vertically downward until they nearly touch the ground.

Using computer analysis, he modeled a half-wave dipole with the center portion at one-half wavelength height. Different lengths of the wire at both ends are bent downward, and a graph is shown giving the reduction in antenna gain as a function of the length of the bent portions. It shows that the theoretical gain of a half-wavelength straight antenna is about 5.2-dBd. Reducing the flat top portion by half, with one-quarter bent downward at each end, reduces the gain by less than 1-dB. (by definition, an amount undetectable by ear).

A second graph shows the relationship between the feed-point impedance and the length bent. It shows that the input impedance of the straight wire is about 70-ohms; with the length of the flat top cut in half, the impedance drops to some 41-ohms, a good match for 50-ohm line.

Title>NHC4:The Mini-5 Beam
Author>Aurick, Lee - W1SE
Source>QST May 97, pp. 58-59
Abstract>Describes construction of a 5-element 2-meter beam antenna using quarter-wavelength elements.

Digest>W1SE addresses the common problem facing many amateurs who are not able to erect outdoor antennas. Attic antennas can often be made to perform well, but most attics are so cramped that, even on the VHF bands, rotary beams cannot be accommodated. But if the common half-wavelength elements could be cut in half, the limitation might be overcome. This article describes a 5-element 2-meter beam that works very well and uses quarter-wave, rather than half-wave, elements.

The antenna is made of five vertical quarter-wave elements: one driven, one a parasitic reflector, and three parasitic directors. The base of each is attached, both electrically and mechanically, to a 72-inch (2.20-m.) long boom made of 1-inch x 1-inch (2.5- x 2.5-cm.) square aluminum tubing. The boom acts as a ground and the elements behave as monopoles.

The driven element is made of quarter-inch (6-mm.) copper tubing, 19-inches (4.8-cm.) long. It is fed with a gamma rod, 10-inches (25.4-cm.) long. At the base of the rod is a 45-pF. variable capacitor attached to the center conductor of a coax connector. The directors are made of hard-drawn No. 10 aluminum wire. The boom is 72-inches long overall and all elements are spaced 18-inches (45.7-cm.) apart. The reflector is 20-inches (50.8-cm.) long, the driven element 19-inches (48.3-cm.), and the directors are all 18.5-inches (47.0-cm.) long.

The shorting bar on the gamma rod is adjusted up or down to achieve a minimum SWR; the variable capacitor must be readjusted to minimum each time the bar is shifted. The author achieved an indicated 1.0:1.0 SWR with the shorting bar 9.5-inches (24.1-cm.) from the base. He reports excellent results from the antenna on the band, with good forward gain and excellent F/B ratio.

Title>NHC5:Time on Your Side
Author>Cox, Donald - AA3EK
Source>QST May 97, pp. 61-62
Abstract>The US Government provides highly-precise time signals by VLF, MF, and microwave radio, as well as by telephone. Explains how to access and use them.

Digest>Amateur radio activities, especially those involving satellites, require accurate time. Crystal-controlled electronic clocks have excellent stability but still must be accurately reset at frequent intervals to provide the highest accuracy. Fortunately, high-precision time signals are available, free or for the cost of a telephone call, from many different government sources. This article describes most of the ones that are of interest to hams.

The ones most universally used, and probably the most convenient for hams, are the time signals from WWV, in Colorado, and WWVH, from Hawaii. They are operated by the National Institute of Science and Technology (NIST), formerly the Bureau of Standards. They broadcast continuously on 2.5-, 5-, 10-, 15-, and 20-mHz. Their signals can also be heard by telephone: the WWV phone number is: (303) 499-7111.

NIST also supports WWVB that broadcasts on Very Low Frequency (VLF) at 60-kHz. There are a number of clocks on the market that use WWVB signals to reset the time automatically, once every 24-hours.

Even higher precision can be obtained from the time standards carried by the GPS satellites. Their signals can be used to establish time to an accuracy of 100-nanoseconds, or better!

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Get Ready for Phase 3D! - Part 5
Author>Ford, Steve - WB8IMY and Lau, Zack - W1VT
Source>QST May 97, pp. 28-30

Abstract>This last installment describes the versatile digital transponder that can be used as repeaters for SSB, FM and digital modes, including graphics.

Digest>The final installment of this series of articles describes some lesser-known resources that will be available from the Phase 3D satellite, when it finally reaches orbit. The first one discussed is RUDAK, which is an acronym of a German phrase meaning: a digital transponder for amateur radio communication.

It is a highly-flexible digital system that can be reprogramed in space to perform a great many different functions and modes that AMSAT may decide that they want to activate in the future. It uses digital signal processing (DSP) technology and will have the ability to process SSB, digital modes, FM and graphics, at high data rates. At minimum, the RUDAK can function as a digital repeater with data rates up to at least 56-kilobaud.

One intriguing possibility is that RUDAK may be able to utilize some very sophisticated error-correcting codes that provide reliable communication with signals of much lower signal-to-noise ratios. A possible benefit of that would be that amateurs on earth might be able to use fixed antennas and low-power transmitters to access the satellite from any part of its orbit.

Another function that the "bird" will carry is GPS. The Phase 3D will know its precise position in space, at all times, and from that knowledge be able to calculate and download the Keplerian elements of its own orbit. This would greatly simplify matters for terrestial amateurs wanting to track the satellite precisely.

Finally, by courtesy of JAMSAT, the Japanese affiliate of AMSAT, the bird will carry a dual-color video system and will broadcast both wide-angle and narrow-angle views of earth and the planets, with high resolution.

Title>GI2:Once Again, a Ham Operator in Command
Author>Keene, Charles A.
Source>QST May 97, pp. 43-47
Abstract>The new commander of the US Strategic Command (successor to the Strategic Air Command - SAC) is a ham, Gen. Eugene Habiger - K6EWP, as was the first one, Gen. Curtis LeMay - W6EZV, in 1949.

Digest>Shortly after the end of World War 2, the first commander of the US Air Force Strategic Air Command (SAC) was the legendary Curtis E. LeMay, W6EZV. LeMay was very interested in HF radio communications and the possibilities of improving world-wide communications for his command. Through his amateur experience, he learned of the superiority of SSB over AM, which was then the standard in military equipment.

He was acquainted with Art Collins - W0CXX, whose Collins Radio Company was the most famous of the builders of amateur, as well as military and commercial HF radio equipment. Cooperation between Collins and military officers that LeMay assigned to work with him led to a number of innovations.

Now, some 50-years later, SAC has become the US Strategic Command (USSTRATCOM). Its commander alternates between an Air Force general and a Navy admiral. In 1997, the commander is General Eugene E. Habiger - K6EWP, who has held a ham license for more than 40-years. He apparently agrees with the statement that General LeMay made in 1954: "The President can make you a general, but only communications can make you a commander!"

2639. Digest of Articles - QST Jun 97 (Long - 35k)

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-12 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <5sppvv$1rk@news1.infinet.com>
Source record: 192020
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the June, 1997 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub/hamradio/arrl/infoserv/digests
(in Europe) ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:The Microwatter

Author>Bramwell, Denton - K7OWJ
Source>QST Jun 97, pp. 33-35
Abstract>Build a microwattmeter capable of accurate measurements of RF power from 10-nW. to 10-uW. to an accuracy within about 1-dB. from

500-kHz. to 148-mHz.

Digest>This article provides construction information for a microwattmeter that can measure RF power levels from 10-nW. to 10-uW. (-50 dBm. to -20 dBm.), with an accuracy within 1.0-dB. over a frequency range from 500-kHz. to the 2-meter band. At even higher frequencies, it is still capable of making relative power measurements. It can be used for direct, on-air checks of field strength and for measuring antenna patterns; combined with a signal generator, it can be used to characterize filters. It can further be used as a detector in all of the circuits shown by Wes Hayward - W7ZOI in his article: "Beyond the Dipper", in QST May 86.

The circuit requires two closely-matched signal diodes. To insure the close match, the author specifies that they be two of the hot-carrier diodes in a CA3039 diode array. Other critical components are a Burr-Brown 1NA2128P dual operational amplifier and a 0- to 1-milliamp meter.

A kit of a PC-board and one each of the critical ICs is available from FAR Circuits, 18N640 Field Ct., Dundee, IL 60118-9269, for $20.50, domestic shipping included. Two dozen, or more, common components, including diodes, resistors, capacitors, etc. are also required.

After construction, the meter must be calibrated using an oscilloscope, or a simple RF meter, as described in: Hayward and DeMaw: SOLID STATE DESIGN FOR THE RADIO AMATEUR, p. 147, a publication of the ARRL.

Title>TA2:High-Efficiency Class-E Power Amplifiers - Part 2
Author>Lau, Eileen - KE6VWU; Chiu, Kai-Wai - KF6GHS; Qin, Jeff - KF6GHY; Davis, John - KF6EDB; Potter, Kent - KC6OKH; and Rutledge, David - KN6EK
Source>QST Jun 97, pp. 39-42
Abstract>This final part of the two-part article describes the power supply and associated circuitry. It is substantially more complex than the amplifier, itself.

Digest>In this concluding installment of the two-part article, the author describes the power supply and associated circuitry required for the operation of the Class E amplifier described in the first installment. It is unusual that the power supply module is substantially more complex than the amplifier used with it.

It is characteristic of a Class E amplifier that the power output is relatively independent of the drive power, and is determined almost entirely by the DC supply voltage. Keying is done by interrupting the DC power. The power supply, itself, includes an isolation transformer, a variable auto-transformer, rectifier and filters to provide output from 0- to 120-volts DC. Associated circuitry includes a keyer, a pulse stretcher, a pulse shaper, and a diplexer. The diplexer is included in order to reduce harmonics and spurious outputs below -70-dBc.

The pulse stretcher and shaper circuits are required to overcome key clicks. Inherent in the operating principle of Class E amplifiers is the fact that the output is always either full-on or full-off. To avoid intolerable clicks, the power supply must be brought from zero to full voltage over several milliseconds at the beginning of each pulse, and in reverse at the end.

A schematic diagram and full parts list are presented in the article. Also included in the article are tune up instructions. Initial adjustments will require an oscilloscope.

In summary, the authors report that the operation of the amplifier in CW mode is excellent. The power can be varied from 1-watt to full output, smoothly. It requires no warm-up, no tune-up, and produces no fan or relay noise. Keying is fully adjustable in all respects.

Title>TA3:Try a Twelfth-Wave Transformer
Author>Emerson, Darrel - AA7FV, G3SYS
Source>QST Jun 97, pp. 43-44
Abstract>Describes a transmission-line transformer that is much easier to make than the more familiar quarter-wave type. It is made of pieces of the same two lines that are to be matched.

Digest>The use of a quarter-wavelength piece of transmission line as an impedance transformer is thoroughly explained in most amateur radio antenna publications. Although it is effective, it requires that the quarter-wave section have a characteristic impedance which is near the geometric mean between the impedances of the source and the load. Thus, to match a 50-ohm source to a 75-ohm load would require a quarter-wave transformer with a 61.2-ohm characteristic impedance. Such cable is not a standard item at Radio Shack!

A lesser-known type of transformer that is much easier to realize in practice is the twelfth-wave transformer. To match the 50-ohm source to the 75-ohm load in the preceding example with a twelfth-wave transformer would require only a short piece of 75-ohm cable and a short piece of 50-ohm cable. The circuit is simply this: starting at the 50-ohm source, a segment of 75-ohm cable is attached. Next, a segment of 50-ohm cable is spliced in; and the 75-ohm load is attached. That is all there is to it!

The two segments are approximately, but not exactly, one-twelfth of a wavelength at the operating frequency. The precise length is calculated by the following formula:

L = arctan(sqrt(b/(b^2+b+1)))/(2*pi)

in which b = the ratio of the impedance of the source to that of the load, and L = the electrical length of the line segments in wavelengths.

The article includes a graph showing the results of that equation. If the ratio is close to 1:1, the electrical length is .083 wavelengths; if it is about 2:1, the required length is about .079. At a ratio of 4:1,

the length drops to .066.

Likewise, the bandwidth of the match is a function of impedance ratio. When the ratios are small, the bandwidth is very wide, and vice versa. Graphs are also included to show the precise bandwidth in percent of center frequency vs. impedance ratios. The graphs show that the operating bandwidth for impedance ratios as great as 4:1 is still very wide: the SWR remains below 1.5:1 over a range of plus/minus 15-percent of the center frequency.

Title>TA4:The 12-Volt Pup - a DC Generator You Can Build
Author>Palis, Yaniko - VE2NYP
Source>QST Jun 97, pp. 45-48
Abstract>Construction of a DC motor-generator set from inexpensive components taken from lawn-mower and automobile parts.

Digest>VE2NYP recognized that lawn-mower engines and automobile alternators are both made in mass production and sell at relatively low cost. To take advantage of those facts, he combined one of each to form a DC motor/generator capable of supplying ample power at 14.5-volts to run Field Day or emergency radio stations, as well as for camping and other temporary uses.

The engine that he used is a 3.5-horsepower type that he removed from a "no-frills" mower that he bought new. He obtained his alternator from a company that rebuilds used alternators. It is rated at up to 50-amp output.

He paid $99 for the mower, and states that the rebuilt alternator should cost between $65 and $85. However, it is very likely that used parts could be obtained for substantially lower prices if one would shop garage sales and second-hand outlets.

He mounted the two units on a base made of plywood and steel angle brackets that are commonly used to support heavy-duty storage shelves. The brackets are punched with multiple holes for ease of use. To couple the drive from the engine to the alternator, he mounted standard vee-belt pulleys with a ratio of about 2:1, so that the alternator runs at double the engine RPMs.

The motor/generator is always used with a storage battery attached as a load. This is not only more efficient, but also eliminates the extreme voltage surges that would occur if the alternator were to drive electronic equipment directly.

The rectifier, filter and control circuits are simple and straightforward. A schematic diagram, parts list, and several detailed photographs show construction details.

PRODUCT REVIEW (PR)
Conductor: Rick Lindquist - N1RL

Sr. Asst. Technical Editor

Title>PR1:Ten-Tec Centaur Model 411 HF Linear Amplifier
Author>Lindquist, Rick - N1RL
Source>QST Jun 97, pp. 66-68
Abstract>Review of Ten-Tec's HF linear that uses three 811A triodes in grounded-grid. It is capable of QSK operation at full power.

Digest>The Centaur is a medium-power HF linear that provides up to 600-watts output on the HF bands. It uses three 811A triodes in parallel, grounded grid. Specifically, its maximum output is rated as 600-watts on SSB and CW, from 80- through 15-meters, 500-watts on 160-, 12-, and 10-meters, and 400-watts on all bands using FM, RTTY, or SSTV modes. It can also be operated using amplitude modulation (AM) with a maximum carrier output of 150-watts. Up to 100-watts of input power are required to drive the amplifier to rated output.

The unit can be operated on either 120- or 240-volts AC power. As delivered to US buyers, it does not tune above the 15-meter band. By supplying a copy of their licenses, buyers can obtain a free modification package comprised of a small circuit board that can be installed through the "inspection plate" access panel, to extend the tuning range to include the 12- and 10-meter bands.

The amplifier is conservatively designed and well built, with one important exclusive feature: it offers full break-in (QSK) operation with no external components required. In addition, it contains a powerful blower that maintains the tube temperatures significantly lower than in comparable competitive rigs, but the blower is so large and noisy that its noise level was found to be objectionable by some reviewers.

Two meters are mounted on the front panel. One reads either power output or grid current; the other reads either plate voltage or plate current. Since excessive grid current is the primary cause of tube failures, one should monitor it at all times during operation.

Title>PR2:AOR AR7030 Communications Receiver
Author>Danzer, Paul - N1II
Source>QST Jun 97, pp. 68-71
Abstract>Reviews a British communication receiver designed for SWLs but capable of respectable performance in amateur radio.

Digest>The AR7030 is a British-built, general-purpose communication receiver designed primarily for Short Wave Listeners (SWL) and monitoring purposes. However, its performance and features place it in a class with some of the best amateur radios on the market today. For example, its dynamic range measured slightly better than the Yaesu FT-1000ME, but not quite a good as the ICOM IC-756, and it incorporates most of the features of high-end amateur receivers, including dual VFOs,

100-memories, controllable filter bandwidths, passband tuning, VFO, IF- and RF-gain controls, attenuation up to 40-dB., AGC, squelch, scanning, and other advanced features. It uses dual IFs, at 45-mHz. and 455-kHz.

Two extra features are included. The first is an infra-red remote controller, similar to those used with modern TV sets. The second is a synchronous AM detector that eliminates most problems of selective fading for short-wave broadcast listening.

The receiver tested did not contain a noise blanker, but one is offered as an optional feature. Other optional items are narrow-band IF filters of various bandwidths, and an audio notch filter.

The manufacturer's list price is $1400. The audio notch and noise blanker, together, add $315.

Title>PR3:Radio Shack Model 21-527 Digital SWR/Power Meter
Author>Ford, Steve - WB8IMY
Source>QST Jun 97, p. 71
Abstract>Describes an inexpensive Radio Shack SWR/Power meter that provides good service, but is no longer available at stores.

Digest>The Model 21-527 is a wide-range SWR and power meter available at an attractive price. It measures over frequencies from 1.8- to 30-mHz. and power from 1- to 2000-watts. Over most of the wattage range, as well as frequency span, the accuracy is within 10-percent - usually much closer.

For rapid tuneup of a transmitter, the digital display is rather slow in response. To remedy this limitation, a bar-graph is displayed on the LCD that responds quickly, making it much easier to tune to a point of maximum power or minimum SWR. The sensor and the measurement/display modules are mounted in separate boxes that can be remote from each other.

Radio Shack's list price is $60, but the product is being phased out and may be no longer available at their stores.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Assoc. Technical Editor

Title>TC1:RF Chokes Choke Touch-Lamp RFI
Author>Davis, Rod - KM6SN
Source>QST Jun 97, p. 74
Abstract>How the author solved RFI from a neighbor's lamps.

Digest>KM6SN reports solving RFI from two of his neighbor's touch-control lamps. In both cases, he found a yellow wire that is attached to the lamp's metal frame and led to the electronic circuitry.

In each, he cut the wire and spliced in a 2.5-mH. RF choke, wrapped the splices with electrical tape, and reassembled the lamp. That completely eliminated the RFI.

Title>TC2:Checking Antenna Layouts
Author>Black, Guy - W4PSJ
Source>QST Jun 97, p. 74
Abstract>Using trigonometry to calculate the distance between two trees when it cannot be measured directly.

Digest>W4PSJ, in this letter, offers a lesson in mathematics to solve a problem that arose in erecting an antenna. The problem was that two trees were available to support both ends of a wire that would be stretched over the roof of a house. With the house in the way, the author was not able to measure directly the distance between the trees to determine whether it was enough to allow them to support the full length.

To solve the problem, he used elementary trigonometry to measure the distance between the trees. First, he established a sighting point from which both trees could be seen, and measured the angle of the lines of sight to each. Then he measured the distance from the sighting point to each. Knowing those three variables, he was able to calculate the distance by the following formula:

C = sqrt(A^2 + B^2 - (2 * A * B * cos(Theta)))

in which: A and B are the distances from the sighting point to each tree and Theta is the angle between the sights.

Title>TC3:Year 2000 Problem
Author>Sudranski, Charlie - W2XY
Source>QST Jun 97, p. 75
Abstract>The "Year 2000" problem is a serious problem for many main-frame computer installations, but trivial for most PC applications.

Digest>W2XY offers a correction to the item in "The Doctor is IN" in QST Mar 97 concerning the problem that will develop in many computers when the date changes from 1999 to 2000. In his letter, he essentially points out that the problem is a trivial one in most PCs and their software. The really serious and exorbitantly expensive problem exists in many main-frame computers that are still using software developed over a period of many years.

HINTS AND KINKS (HK)
Conductor: Bob Schetgen - KU7G
Asst. Technical Editor

Title>HK1:Build a Vacuum-Tube Product Detector
Author>Van Prooyen, L. - K8KWD
Source>QST Jun 97, pp. 72-73
Abstract>How to add a vacuum-tube product detector to antique receivers to enhance SSB reception.

Digest>K8KWD enjoys restoring and using antique radio gear. Since most of the receivers that he works on were built before single sideband (SSB) became popular in amateur radio, almost none contain product detectors, and their performance in receiving SSB falls far short of optimum. In this "hint", he offers a circuit for a single-tube product detector to be used in practically any vacuum-tube receiver to replace the vacuum-tube diode detector almost universally found in vintage receivers.

The circuit uses a 6BY6 or 6BE6 miniature glass tube, and mixes the output of the beat-frequency oscillator (BFO) with that from the IF to produce audio output. The author states that he has successfully used the circuit with a number of receivers, including a Collins 75A2, a 51J3, several National radios, and a Hammarlund HQ-140X.

Title>HK2:Extension Handles as Light Weight Antenna Supports
Author>Rolek, E. P. - K9SQG
Source>QST Jun 97, p. 73
Abstract>Paint stores sell extension handles for paint rollers that are handy as antenna poles for temporary use.

Digest>This letter points out that most paint stores currently sell extension handles for paint rollers that are usually made of light-weight tubing, either aluminum or fiberglass-reinforced plastic (FRP). They can easily be adapted for temporary use as antenna supports for Field Day, or other such use. K9SQG bought one made of FRP that extends to a length of 16-feet (4.9-m.), and easily supports a tubular ground-plane or beam antenna. The retail cost was $31.

Title>HK3:A Source for High Current Relays
Author>Rolek, E. P. - K9SQG
Source>QST Jun 97, p. 73
Abstract>WalMart stores' RV departments sell high-current relays and switches useful in installations of battery-powered rigs.

Digest>K9SQG points out that the sporting goods and RV department of WalMart stores sells high-current relays, switches, and fuse holders that handle up to 100-amps. They are very useful for battery-powered rigs and mobile installations.

NEW HAM COMPANION (NHC)

Title>NHC1:The Doctor is IN
Author>Various
Source>QST Jun 97, pp. 55-56
Abstract>Questions and answers on subjects primarily of interest to newcomers to amateur radio.

Digest>Questions discussed in this issue include: whether it is legal to send WAV audio files over the air; MMX computer processor technology; the Battle Creek Special antenna; whether a packet mailbox can operate without the computer being attached and active; identifying leads on power transformers; the operating frequencies of active ham satellites; the legal issues surrounding cross-band repeaters, and the rationale for the continued popularity of Baudot RTTY.

Title>NHC2:Let's Talk Transmission Lines
Author>Farmer, Edward J. - AA6ZM
Source>QST Jun 97, pp. 57-59
Abstract>A primer on transmission lines used by radio amateurs.

Digest>This article is a primer on transmission lines. It discusses antenna input impedance, transmission characteristic impedance, matching, and minimizing losses. Also discussed and illustrated are various kinds of coaxial and parallel-wire transmission lines.

Title>NHC3:Position Reporting with APRS
Author>Parry, Richard - W9IF
Source>QST Jun 97, pp. 60-63
Abstract>Describes the Automatic Packet Reporting System (APRS) which uses GPS to determine geographic locations of each member of a network, and amateur packet to broadcast the data to all.

Digest>In this article, W9IF describes the activity of the Automatic Packet Reporting System (APRS). This is a system and network consisting of amateur radio packet stations, both fixed and mobile. The mobile

stations are equipped with Global Positioning System (GPS) receivers and computer software that continuously reads their precise location in terms of Latitude and Longitude, and automatically broadcasts that information through the rest of the network. The fixed stations may or may not have GPS receivers, but they know their precise locations and transmit them, along with identifying data, periodically. The intent of this activity is to allow every computer attached to the network to plot maps showing the position of every other active station, in real time.

The APR System has been used to great advantage in managing group activities like cross-country bicycle races and amateur radio "Fox Hunts". Knowing the precise location of every participant at all times is valuable not only for management of the affair, but also for safety so that emergency aid can be dispatched immediately if it is needed.

The information on the APRS system is not limited to local areas. Although most of the traffic originates on VHF, there are gateway Digipeaters on the 30-meter band that disseminate the information over much of the United States. Also, summary information is available on the Internet and World Wide Web sites. The article lists many such sites that hams, even those who are not members of a system, can view the activities whenever they wish.

Title>NHC4:Tallyho 6 Meters!
Author>Ford, Steve - WB8IMY
Source>QST Jun 97, pp. 64-65
Abstract>Describes Sporadic-E propagation on the 6-meter band and how to take advantage of it.

Digest>The 6-meter band has many attractions. One of the most exciting is the availability of Sporadic-E propagation that allows contacts over distances of 500-miles or more, at times. The signal paths take advantage of clouds of ions that form in the "E-Layer" of the ionosphere, sporadically. There is no way to forecast when or where such clouds will develop, but it is known that the activity is much more frequent in summer than at other times. A smaller peak of activity also tends to occur in December and January.

WB8IMY, in this article, relates his first experience with the 6-meter band, during the January, 1997 ARRL VHF Sweepstakes. He worked ten stations in one afternoon in Michigan, Wisconsin, and Illinois from his Connecticut base using only 10-watts output and an attic dipole. He strongly recommends that hams with 6-meter equipment set their receivers on 50.125-mHz., crank up the volume, and increase the squelch until the noise stops. Then they should go about their business, confident in the knowledge that if a Sporadic E opening occurs, the cacophony of signals will immediately get their attention so that they can join the fun.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Broadbanding the Arecibo Dish
Author>Zimmerman, Robert K. - NP4B
Source>QST Jun 97, pp. 28-32
Abstract>A description of the Arecibo radio astronomy antenna in Puerto Rico, its history and the improvements that have been made through the years.

Digest>The world's biggest dish antenna is the one at Arecibo, Puerto Rico. It was originally built in 1962 for radio and radar astronomy, and is 1000-feet (305-m.) in diameter. The original reflecting surface was one-half inch (1.3-cm.) mesh hardware cloth. This worked well at 432-mHz., but as microwave apparatus became more powerful and with lower noise figures, it became desirable to extend the frequency range of the observatory.

In 1974, the installation received its first upgrade. The mesh was removed and replaced with smooth aluminum sheet that is speckled with 4-mm. (about 3/16-inch) holes that allow sunlight and water to reach the ground underneath, so as to maintain plant life.

The dish is a section of a sphere, not a paraboloid. The reason for this is that, with a sphere, one can shift the main antenna lobe by moving the focus. However, the focus is a line, rather than a point, so the original receiving aperture was a waveguide shaft with receiving slots spaced along its length. It was suspended from cables strung between towers around the periphery of the dish, and was moved by changing the relative lengths of the support cables.

In 1996, Arecibo received its second upgrade. A NASA scientist designed a pair of odd-shaped reflectors and showed that, by substituting them for the slotted wave guide, one could bring all received signals to a common focal point that would be independent of frequency. That upgrade is due for completion in June, 1997.

In the meantime, the installation has been making repeated astronomical discoveries of a wide variety. And, used as a radar transmitter and receiver, it has made highly accurate and detailed maps of Venus, Mars, and many asteroids. With every upgrade and every move to shorter and shorter wavelengths, the relative gain and the resolution of its views of the universe continue to improve. It is expected that the results of the third upgrade will add another quantum jump to the power of this great instrument.

Title>GI2:The Crash of ComAir Flight 3272
Author>Falls, Kathy - KB8ZZZ; Gomes, Gerald, Jr. - WB8RNY;
Karmol, Mike - N8KUF; and Lindner, Larry - KB8AIZ
Source>QST Jun 97, pp. 49-54
Abstract>How amateurs reacted to the crash of ComAir Flight 3272 near Detroit, and lessons that were learned from the experience.

Digest>On January 9, 1997, ComAir Flight 3272, a commuter plane from Cincinnati to Detroit, crashed into the frozen ground near Ida, Michigan, killing all 29 people aboard. The Wayne County, Michigan RACES and ARES immediately went into action in cooperation with the County Emergency Operations Center. Hams from Detroit and surrounding areas provided emergency communications for the next six days. In doing so, they provided vital services to their communities and, in the process, learned a number of lessons.

This article describes their activities and some of the lessons they learned. The first, and most important lesson is that for adequate emergency communications, multiple and simultaneous communication modes are absolutely required. Trained and experienced operators are necessary, not only in the heat of the initial emergency, but also subsequently, for many hours and days.

2640. Kenwood TM-741 info wanted

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-12 00:00:00 UTC
From: stealth@xmission.com
Message-ID: <33f010b0.69162652@news.xmission.com>
Source record: 192021

I've been forced to reset my Kenwood TM-741, and now have lost
a feature I hope someone can help me get back.

The PF key on the mic. can be used to enter frequency 'entry' mode
when in VFO mode. By pressing PF, then the digits of the freq.
can be entered via the DTMF keypad.

Can someone post or mail the procedure to get this feature back?

Thanks in advance!

>more for US amateurs than their Japanease counterpart, with less
>membership?

I don't think that the "JRRL's" membership has anything to do with what
they "do" and "don't" do for their members. I believe the answer is more
cultural than anything else. We must remember that Japan is a very
homogenious society. They also have a deep-seated sense of loyalty,
which is one reason why their people go to work for one company their
entire lives. Now, I'm not saying this is the case, but I wouldn't doubt
it if these same cultural ingrains permeate into their social relationships
as well.

--

I also seem to recall a while back that Japan has two license categories --
an "operator" license and a "station" license. If I remember correctly
station licenses were very expensive to get, and most Japanese amateurs
have "operator" licenses. To operate, they belong to local clubs which
have "station" licenses and own equipment. If these clubs have as a rule
of membership that the operator must also belong to the "JRRL", then that
also might explain a high membership rate.

2647. Selling Mercedes Unimog Radio Truck with Radios

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-12 00:00:00 UTC
From: Brad Beesley <beesley@primenet.com>
Message-ID: <33F0B53E.478@primenet.com>
Source record: 192028

Please forgive me if this if off topic - new to the group.

I am selling a very nice Belgian radio truck that has all the radio gear intact (less transmitter). The Mercedes-Benz Unimog is one of the world's most capable four wheel drive vehicles ever made. Unimogs are used by over 75 countries for their military operations...and are also used by cities and governments for various functions parts are plentiful and cheap. If you would like to find more about Unimogs, see my web page below.

This vehicle is a 1965 S404 Unimog (gasoline). The Radio shelter was replaced in 1982 and the vehicle underwent a complete rebuild by the Mercedes Factory in 1985. The Radio Box portion of the truck makes a superb all terrain camper and has a gasoline heater for those frigid arctic conditions, as well as a separate battery system to run the gear. It is designed to house three or four operators in addition to the driver and co-driver who remain in the cab. All the radio gear is said to be intact, and photos reveal all the cables, and perhaps even the original generator. I don't know anything about radio equipment, so won't be able to answer any questions until I make inspection of the vehicle (September). I would like to sell the vehicle and the radios as a complete unit, so not parting out the radios.

Contact me via e-mail for photos and prices if you are interested.
I can tell you all about Unimogs, but don't know about radios, sorry.

>guns beat the hell out of bows and arrows and tomahawks ... right???
The gun role is overplayed courtesy of Hollywood. Usually only the
tribal hierarchy possessed firearms. Gun powder was, for the most
part, unavailable to plains indian. Manifest Destiny and the sheer
numbers that followed led to the demise of a once proud people not the
introduction of the firearm.

The gun didn't change the method of the hunt. The same skills were
required. Killing Bambi's mother or a buffalo is much more than aim
and shoot. The introduction of the horse to America had a far greater
impact on the daily life of native Americans than the firearm.
> It's
>too bad
>that the beepers can't see get past their quasi-religious hang-ups and
>recognize the
>similar superiority of modern methods and devices ...
The crux of the hobby is the ability to communicate, the varying modes
are only means to that end. The status quo is that a demonstration of
telegraphy proficiency is required for HF access. Name calling will
not change that.

Using telegraphy ito communicate is indeed are very old method but it
is extremely efficient it terms of resources and equipment. I have
QSO'd JA from GA running less than 5 watts using both cw and pactor.
It costs me a dollar a day to power this box, 266 P^2/256 meg. The
hardware draws so much power that even with milliwatt power levels of

input to the final stage, there is not much efficiency.

Throughput shouldn't be an issue if we are talking real-time communications. I can use a T1 connection to send you 'War and Peace', how fast can you read? No matter at what speed data is passed the brain's response time is a finite property.

Machine-to-machine is networking not communications. Its not much of challenge for me, coding RPCs in a C/S environment is just a way to make a living. It doesn't matter if its for a MS-shop or not, I can write it in whatever language you want for whatever platform.

Bandwidth is one place more advanced digital modes are more efficient. Even so the number of active hams could treble and there would still be no overcrowding. There is even enough room for no-coders to play networking on HF. 'Our' portion of the spectrum is vastly under utilized.

Warning - quasi-religious statement ahead: Funny similarity tbetween 'our' spectrum and Manifest Destiny. The native Americans did not consider the land to be a possession. The Great Spirit was generous enough to allow them to live on it.

Error correction, what can I say. Its is good but it seems like some over-kill. Should I code a GUI app to do what a batch file can accomplish? GIGO still works on any platform errrrror-correction or not ;)

Like I stated a couple paragraphs up, there is room on HF for no-coders to play networking even though part 97 sez nil concerning machine-to-machine networks. The status quo does not allow that and perhaps it will change. All the name-calling in the world will not accomplish that, it doesn't matter who slung the first buffalo chip.

Time to robusticize some code....

>do I get FCC form 610?
>
>

You can call the following toll free number and request a form 610, or
you can go to the FCC ftp site, ftp.fcc.gov, and download a copy,
which you can print out and send in

1- 888-225-5322

You can't renew until 90 days before your license is due to expire in
1999, so you'll have to keep track of the expiration date unless you
have some service that reminds you. It's not a major deal either way.

Hello all,

I am taking a newly acquired TenTec Omni D camping with me
in the next week or so. I had planned on using a simple
40m dipole suspended between two trees at the camp site I
had planned on getting. However, that site was taken and
I have now reserved another that is MUCH less apealing from
an antenna standpoint.

What would be a good simple antenna to use that would hopefully
not require a tuner as well? The Omni is transistor output,
so is likely intolerant of SWR above 3:1 or so.

I will have a tree limb up about 20 feet. I was thinking of using
a sloping dipole - what
would be my best bet for feed impedance? As I recall, isn't
a sloper lower in feedpoint Z than a dipole?

A base-loaded vertical design might be useable, but radials
would be a problem, although certainly possible. (trip hazard)

I have a tuner I could take and just load a random wire, but
I am trying to keep this setup simple. Something broadbanded
and low Q would be preferred. Or narrow and high Q like a
hustler 40m resonator, if anyone has one. I would situate
it so that radials could be used. I'm easy. I just want
the Omni to be happy :)

Any one have a design they've tried that might be a good
option? (40 CW is my only interest).

Thanks for any advice

Dave WB7AWK

ps - anyone with a SUPER deal on a used OutBacker just feel
free to drop me a note :) That's why I posted to swap,
just on the outside chance.

2654. Radio Shack Weather Station (WARNING!)

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-12 00:00:00 UTC
From: arnoldr@mail.ralabs.com
Message-ID: <33f0de86.72008799@news.axess.net>
Source record: 192035

A warning to all prospective buyers of the Radio Shack WX-200 Weather Station -

After purchasing one on Sunday, August 10th, I called the Radio Shack tech support line to enquire about programming information for the 9 pin serial port used to send data to a PC. The station comes with Windows based software to do data collection on a PC.

I also called Accuweather (the folks that wrote the software). I was told by both companies that the programming information was confidential and could not be released. In fact, they pointed me at each other and said "good luck".

If you are considering the purchase of the station for a purpose that requires writing special software then DON'T BUY THIS UNIT. I'm certain that it works quite well with the software supplied and at $300 it's a good deal if all you want to do is collect weather data with their software.

If you want to ANYTHING else with the unit you'll need to try to capture the data and figure it out yourself. A pitty because Radio Shack could have sold hundreds or maybe thousands of these just to the "tinkerer" market alone.

I'm going to attempt to return mine to the store for a refund since I didn't even unpack the thing. I imagine that I "threw away" $300 dollars however.

You can voice your displeasure (if you were looking at this unit for other applications like I was) by using the information at these web sites:

Tandy (Radio Shack) -
http://www.radioshack.com/
or
http://www.tandy.com/

Accuweather -
http://www.accuweather.com/

By the way, as I write this there is NO INFORMATION about this unit at either site., In fact, I tried the help URL listed in the unit's manual for Accuweather and got refused access!

If I can get my money back I'll look at one of the other satations like Davis or Peet where programming information is avaialble even for the price of a development kit.

Bob Arnold N2JEU

2656. Digest of Articles - QST Jul 97 (Long - 34k)

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-12 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <5spqe3$1sr@news1.infinet.com>
Source record: 192037
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the July, 1997 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub/hamradio/arrl/infoserv/digests
(in Europe) ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:A Parallel Port Adapter for JVFAX
Author>Zehr, Grant - AA9LC
Source>QST Jul 97, pp. 35-39
Abstract>Describes construction of an interface that will enable anyone with an HF receiver and a personal computer to copy SSTV and Weatherfax images.

Digest>One popular approach to the display of SSTV and Weatherfax images is to use JVFAX software with a personal computer. It has the advantage that it can be used on obsolete computers using '286, or later, CPU chips. The software causes the computer to convert the Automatic Picture Transmission (APT) audio signal to a graphics file that can be shown on the computer screen, or printed on a printer. JVFAX version 7.0 stores the image as a ".GIF" file, and version 7.1

uses the ".TGA" type file.

To inject the audio signal into the computer, one can use a serial or parallel port. In either case, an interface adapter is necessary. This article contains instructions for building an adapter for a parallel port, which has advantages over a serial one. Using parallel input, one can inject a 2400-Hz. synchronizing signal simultaneously with the image audio. The result is that the picture will always have straight edges; whereas when a serial port is used the edges, are commonly bowed or slanted. A second advantage is that a tape-recorded audio signal can be used as easily as a live one.

A possible disadvantage is that it requires the computer parallel port to be bidirectional. Most modern computers include bidirectional ports, but many older ones do not. However, replacement bidirectional parallel port cards are inexpensive and widely available.

The adapter described uses thirteen ICs on two circuit boards, plus a power supply with both plus and minus 15-volt output. The author states that construction is easy if one uses the etched and drilled PC-boards available from FAR Circuits, 18N640 Field Ct., Dundee, IL 50118-9269. The price for the two boards is $10, including domestic shipping.

Title>TA2:My All-Purpose Voltage Booster
Author>Ulbing, Sam - N4UAU
Source>QST Jul 97, pp. 40-43
Abstract>Construction details for switching regulator that will act as a DC-to-DC converter. It will provide an output voltage adjustable from below that of the input to considerably above it.

Digest>This article describes the construction of a switching regulator which acts as a DC-to-DC converter. With a DC input of one value, it can produce an adjustable controlled output voltage higher, or lower, than the supply. For example, it can be used to supply controlled 12-volts DC from the 5-volt output of a 4-cell NiCad battery pack.

The operation of a switching regulator circuit is easy to understand although, until recently, designing one was devilishly difficult. According to N4UAU, the availability of design software free from National Semiconductor now makes it much easier.

The principle of operation is as follows. The input DC current flows to ground through a ferrite-core choke and is interrupted by a semi-conductor switching oscillator at a rate of about 100-kHz. When the current is stopped, the voltage across the inductor soars to a high level, and charges a capacitor. The voltage to which the capacitor charges is a function of how long the switch remains open during each cycle.

A voltage divider across the output provides feedback to the oscillator that modulates the pulse width, thus maintaining an adjustable constant voltage on the capacitor. The output current is

drawn from the capacitor through another choke and shunt-capacitor filter to remove the ripple voltage and provides a steady output.

Construction of the regulator is straightforward except for the need for noise suppression. The sharp-edged square wave at a relatively high frequency creates a great amount of electrical noise. The author's board layouts were carefully adjusted to minimize radiated noise, and he describes other noise-suppressing methods that were successfully used to keep RFI down to a tolerable level.

For free software and more information about switching modules, consult the National Semiconductor Web page: http://www.national.com/sw/simpleswitcher/0,1043,0,00.html. Alternatively, contact them by E-mail at: support.tevm2.nsc.com.

Title>TA3:Computer Control for Mobile Ham Radio Operation
Author>Zygielbaum, Arthur I. - WA6SAL
Source>QST Jul 97, pp. 44-47
Abstract>Describes hardware and software for adapting a "palmtop" computer to become a "front panel" for an HF transceiver for mobile installation, allowing the rig to be remotely mounted.

WA6SAL has used an ICOM IC-725 as a mobile radio for a number of years. He recently bought a new vehicle which, though larger than his former car, has no available space for mounting even a tiny modern radio in or near the dashboard, not to mention the older and larger IC-725. Having had a great deal of experience in programming PCs, he decided to keep the old rig, mount it in the rear of the vehicle, and program a "palmtop" computer as a remote controller and "front panel" for the rig.

For his computer, he selected a Hewlett-Packard HP-95LX with 512-kB. of RAM. This is an obsolete model, but nearly ideal for the task.

To mesh his computer with the radio, he used ICOM's Communications Interface V (CI-V) that provides an RS232-based network for interconnections. In addition to that, Mr. Zygielbaum needed to build only a simple converter from RS232 to TTL electrical standards but, for the sake of convenience, he also built a box containing a volume control and power switch.

With the hardware details settled, he took the opportunity to design and build his ideal "front panel" control system, all in software. It features a frequency-display window that also displays the band and mode in use.

Scan control is done through software. Each band has six preset scan limits: four are preset to correspond to the voice privileges of the various license classes; the other two can be customized, at will. When the rig is scanning, a "dial" is drawn on the display showing the frequency at the low- and high-ends of the scan width, with the current setting indicated by an arrow.

Another mode provided is "orbital scanning". In this mode, the rig scans back and forth over 5.0-kHz. centered on the frequency set on the dial, to facilitate selecting the optimum setting for an SSB signal.

Semi-automatic logging of QSOs is also programmed in. The frequency, time, and mode are automatically entered, and the operator needs to key in only the station call sign and any other desired information. The entries are kept in a straight ASCII file with comma delimiters that can be easily loaded into spreadsheet or database management programs to generate QSL cards, or otherwise use the data. A further convenience that he added is a callsign prefix and country database. With it, he can instantly check the country represented by a particular station prefix, and vice versa.

Frequency, mode and band memories are also implemented in software. Recalling the memory automatically sets the transceiver accordingly.

One can set frequency by typing in the exact numbers, or change it in steps of 1- to 10-kHz. by hitting the number keys 0 through 9, with 0 representing 10. It can be changed in 50-Hz. steps with the plus or minus keys.

For manual control, frequency is set in a number of ways. Pressing the "T" key activates the tune function. With it in use, keyboard entries can set the transmit mode, the transmitter frequency, and the center of the scanning band. When tuning is complete, a press of the "ESC" key returns the radio to its previous state.

The WA6SAL program can be obtained on 3.5-inch diskette from the author for $25, or else the program can be copied on a PCM CIA RAM card supplied by the buyer, for the same price. The author's mailing address is: 4910 Hampton Rd., La Canada, CA 91011, or via E-mail at: aiz@ctwsoft.com.

PRODUCT REVIEW (PR)
Conductor: Rick Lindquist - N1RL
Sr. Asst. Technical Editor

Title>PR1:QST Compares - Dual-Band FM Hand-Held Transceivers
Author>Ford, Steve - WB8IMY
Source>QST Jul 97, pp. 58-65
Abstract>Performance reviews of five dual-band H-Ts: Alinco DJ-G5TH, ICOM IC-T7A and IC-W32A, Standard C-508A, and Yaesu FT-50R.

Digest>This article reviews five dual-band FM H-Ts currently in production. They are: Alinco's DJ-G5TH, ICOM's IC-T7A, ICOM's IC-W32A, the Standard C-508A, and the Yaesu FT-50R.

All five provide for programming by personal computer, although it is an extra-cost option on the ICOM and Yaesu rigs. All five also provide expanded VHF/UHF reception and AM Aviation Band reception; between 60- and 100-memory channels; programmed scanning; and CTCSS encoders. All

but the ICOM IC-W32A have lighted buttons. All but the ICOM IC-T7A provide priority channel monitoring. All but the Standard C-508A provide selection of high- or low-power output, CTCSS decoders, and paging (code or tone squelch). All but the C-508A transmit at from 2- to 5-watts in high power output; the tiny C-508A transmits only 0.28-watts.

Alinco DJ-G5TH
The DJ-G5TH is a capable HT with several extra features. Chief among them is the "Channel Scope", a kind of miniature spectrum analyzer. Second is an S-meter display and third is a Receive Attenuator that is most useful when one is attending a Hamfest and rubbing elbows with others using H-Ts at the same time. Another handy feature is a dual PTT button; pressing one will cause transmitting at high power, the other at low power.

The reviewers criticized the fact that the unit does not provide the automatic repeater offsets that many of its competitors have; hence, the operator must remember whether the offset on a particular repeater is either positive or negative, and enter it accordingly.

A typical selling price is $382.

ICOM IC-T7A
The IC-T7A is one of the easiest to operate of the reviewed rigs, because it lacks a number of the special features and functions included in other rigs. But none of the reviewers felt that any of the missing features interfered significantly with its usefulness.

One special feature is automatic power roll back. After the PTT has been keyed for six-minutes continuously, the power is automatically reduced. This takes care of situations in which the rig is left unnoticed with a weight lying on it, holding down the button.

A typical street price is $303.

ICOM IC-W32A
In contrast with the IC-T7A, the IC-32A offers almost all the "bells and whistles", yet the designers did not rely on multipurpose control knobs and buttons. All controls are actuated by keypad buttons and/or the tuning knob.

To keep operators from getting lost in the myriad of options and functions, they can call up an explanatory text that will crawl across the bottom of the LCD display.

The IC-W32A provides 100-memories for each band, 200 in all! To help keep them straight, it allows an 8-character alphanumeric label to be created for each channel. The reviewer summarizes by saying that "IC-W32A provides just about everything you could possibly need in an H-T".

Its street selling price is about $407.

Standard C-508A
This unit is the smallest of the five radios. It is only about 4-inches (10-cm.) high and 2-1/4-inches (5.7-cm.) wide. It can fit easily into a shirt pocket.

Its receiver covers from 100- to 152-mHz., excepting the cellular-phone frequencies. When it is tuned to the aircraft band, it automatically switches to AM mode.

The C-508A provides sixty memory channels, the programming of which is rather simple. It offers seven different scanning sequences.

Its "battery pack" is two AA-cells (its transmitter output is limited to 0.28-watts.) The reviewers found that the low power is adequate for accessing local repeaters and, if it has clear line-of-sight to a more remote repeater, it will still be adequate.

The unit does not contain an automatic repeater offset, nor a DTMF keypad, so it will not be able to access a telephone autopatch on a repeater. The Owner's Manual is difficult to understand because of faulty translations into English.

A common selling price is about $287.

Yaesu FT-50R
The FT-50R is only slightly larger than the tiny C-508A, yet it transmits a full 5-watts of power. The battery provides an adequate 9.6-volts at 600-mAh.

In spite of its small size, it provides "an amazing number of features," quoting the reviewer. It is ruggedly built with almost every feature desired in an H-T.

A typical market price is $347.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Assoc. Technical Editor

Title>TC1:Diode-Protection
Author>Stuart, Ken - W3VVN
Source>QST Jul 97, p. 68
Abstract>With modern semiconductor diodes, it is no longer advisable to shunt each diode in a string with resistors and/or capacitors.

Digest>In the early days of semiconductor diodes, when a series string was used as a high-voltage rectifier, it was thought necessary to shunt each diode with a resistor and a capacitor in order to equalize the amount of voltage drop across each. Now, all modern diodes are protected against arcing from high reverse voltage, and equalizing resistors are no longer necessary. In fact, such resistors are subject to destructive arc-over and actually detract from the reliability of the circuit. Also, capacitors are less reliable than the diodes and,

likewise, are not recommended.

Title>TC2:The SWR Analyzer and Transmission Lines
Author>Schuch, Peter J. - WB2UAQ
Source>QST Jul 97, p. 68
Abstract>How an antenna analyzer can be used in trimming a length of transmission line to one-quarter wavelength, and also to measure its velocity factor.

Digest>In QST Sep and Oct 96, N1FB and W3NZ described ways of using SWR analyzers to measure factors other than SWR and antenna impedance. In this letter, WB2UAQ adds some additional suggestions.

It is easy to determine when a given length of transmission line is an electrical quarter- or half-wavelength with an SWR analyzer. To do so, one screws a T-connector onto the analyzer terminal and shunts a 50-ohm resistor between the conductors on one side of the T. The transmission line is connected to the other side. If the line length is to be an electrical quarter-wavelength, the end of the line should be shorted; if a half-wavelength, it should be left open. Then the analyzer is tuned across the band to find the frequency at which the SWR is minimum, or 1:1. At that frequency, the line is the desired length.

The same setup can be used to measure the velocity factor of the line. Using an arbitrary length of line, one tunes to find the frequency at which it is an electrical quarter-wavelength. Then one measures the actual length and divides it by the free-space quarter-wavelength. The quotient is the velocity factor.

If the analyzer can also measure the exact value of the impedance, one can use it to measure the line's characteristic impedance, Z(0). Attach a quarter wavelength of line to the analyzer, terminate it with a 50-ohm resistor, and measure the input impedance. Solve for the characteristic impedance by the formula:

Z(0) = SQRT (Z(1) + Z(2))

in which Z(1) is the measured input impedance, and Z(2) is 50-ohms.

The described measurements are reasonably accurate at HF. At VHF and above, the lengths and velocity factors of connectors and adapters are significant and begin to degrade the accuracy of measurement.

HINTS AND KINKS (HK)
Conductor: Bob Schetgen - KU7G
Asst. Technical Editor

Title>HK1:Computer Control for IC-245 Transceivers
Author>Gregory, Carl - K8CG
Source>QST Jul 97, pp. 66-67

Abstract>Building an interface for a computer to control an ICOM IC-245 transceiver. Also describes the software to be used with the system.

Digest>The ICOM IC-245 is a synthesized, all-mode, 2-meter transceiver manufactured in the late 1970s. At that time, personal computers were not yet common and no provision was made for computer control of the radio. K8CG has a '245, wanted to add computer control, and developed a method of adding it.

In this article he shows a simple interface, and also a Q-Basic program, for accomplishing the task. The interface is illustrated by a schematic diagram and parts list. It uses only one common transistor, a half-dozen inexpensive diodes, and a few passive components.

The program contains fewer than 50-lines of code. It can be downloaded from either the Internet or the ARRL "Hiram" BBS. The telephone number for Hiram is: (860) 594-0306. To get it via Internet, use the FTP site: oak.oakland.edu. The file is IC245.ZIP in the directory: pub/hamradio/arrl/qst-binaries/.

Title>HK2:A Band-Data Connector for the Yaesu FT-1000MP
Author>Bratton, Timothy L. - K5RA
Source>QST Jul 97, p. 67
Abstract>

Digest>The FT-1000MP is a top-performing transceiver, and very popular. It contains a relay for keying an external power amplifier, but it is physically noisy and takes a millisecond, or more, to close.

The rig also contains a transistor keying circuit that can key QSK amplifiers, such as the Alpha 86. To use it, one must be sure that the voltage and current characteristics of the amplifier keying line will not be greater than the rating of the transistor in the transceiver; that is, maximum current less than 100-mA. and voltage between 0- and plus-15-volts.

The jack on the transceiver requires an 8-pin DIN plug, but does not fit the one sold by Radio Shack (No. 274-026). The 8-holes in the jack span a 270-degree arc (3/4 of a circle), whereas the Radio Shack plug spans a 300-degree arc (5/6 of a circle). A 270-degree DIN plug is available from Mouser Electronics, 2401 Hwy. 287N, Mansfield, TX 76063. Alternatively, one can modify the Radio Shack plug to work in this application by snipping off all the pins except numbers 1, 2, and 3, which are the only ones used in this circuit.

FEEDBACK (FB)

Title>FB1:"Broadbanding the Arecibo Dish", QST Jun 97
Author>Knisely, David W. - KA0CZC
Source>QST July 97, p. 65

Abstract>The caption on the radar reflectivity map of the moon is incorrect. The brighter craters and upland regions have rougher, not smoother, surfaces. The darker regions are relatively smooth plains.

NEW HAM COMPANION (NHC)

Title>NHC1:The Doctor is IN
Author>Various
Source>QST Jun 97, pp. 50-51
Abstract>Questions and answers on subjects of interest primarily to newcomers to amateur radio.

Digest>Subjects discussed in this issue include: the functions of antenna tuners; loop antennas; jargon used in aviation radio traffic; testing antenna traps; the use of radials or a counterpoise with a vertical antenna; and other subjects.

Title>NHC2:IPhone to Israel!
Author>Danzer, Paul - N1II
Source>QST Jun 97, pp. 52
Abstract>Describes the use of IPhone software so that a 2-meter FM repeater can act as a bridge to connect the signals from an H-T to the Internet, on which they may be carried throughout the world.

Digest>N1II uses a 2-meter H-T to access a nearby FM repeater that is operated by Rich Roznoy - K1OF. The latter makes available a bridge from his repeater to the Internet, using IPhone (Internet Phone). By taking advantage of the combination, N1II used his H-T to carry on a QSO/chat with 4X4NS in Tel Aviv, Isreal. At the Israel end of the link, 4X4NS was not using a radio. He was using a mike and headset connected to his computer that was logged onto the Internet.

IPhone is a software package and a system of "chat channels" on Internet. To use it, one needs only a computer containing a sound card, microphone and speaker, or headset. The software translates the audio input into data, sends it over the Internet to a receiving site where the data is turned back into audio. There is an IPhone chat channel set up specifically for hams, who can log in individually or as control stations for their repeaters.

The author states that the audio is surprisingly clear, although there will be interruptions and/or distortion if the data traffic gets too heavy.

Further information about IPhone is contained in the ARRL publication: PERSONAL COMPUTERS IN THE HAMSHACK. It can be bought from amateur radio stores or direct from ARRL, 225 Main St., Newington, CT 06111-1494.

Title>NHC3:CW With Your H-T
Author>DuBon, Donald J. - N6JRL
Source>QST Jul 97, pp. 53-54
Abstract>Build an audio oscillator that can feed code-practice CW signals into an FM H-T for broadcast over a wide area.

Digest>N6JRL teaches Morse code classes. He realized that, with a simple audio oscillator feeding into the microphone circuit of the H-T, he could transmit modulated CW signals (MCW) on the 2-meter FM band. He designed and built a simple but effective circuit, using a NE-555 timer chip and a handful of passive components. Now he conducts practice sessions on the air for many Technician-class hams who want to upgrade their licenses.

A schematic circuit diagram and parts list is included. All parts can be obtained from Radio Shack, or other electronic parts outlets.

Title>NHC4:Two for the Price of One
Author>Ford, Steve - WB8IMY
Source>QST Jul 97, p. 56-57
Abstract>How to combine 20-meter and 6-meter dipoles for common mounting and a common feedline.

Digest>WB8IMY had a 20-meter dipole in his back yard, and a 6-meter one in his attic, but switching between the two was unhandy. He realized that he could combine the two dipoles, feed them with the same coax feedline, and eliminate the switch.

To do this, he attached the center of the 6-meter dipole to the center of the 20-meter dipole. At each of the ends of the shorter antenna, he attached one end of a short wooden dowel stick that was treated with preservative. The other end of the stick was suspended from the 20-meter antenna wire, so the 6-meter antenna ran nearly parallel with the longer wire, but sagging a bit below it. Now he can feed power to either antenna through the line.

This process works well. The reason is that a dipole resonant on 20-meters shows an input impedance that is a good match for the coax feedline when fed with 20-meter power. But the 6-meter antenna in parallel with it presents a high impedance. When 6-meter power is fed into the same line, the opposite is the case.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:New Mexico Mountaintop SAR Team
Author>Tull, John - KC5HXU
Source>QST Jul 97, pp. 28-30
Abstract>Describes the community-service activities of the St. Johns College Search and Rescue Team, Santa Fe, New Mexico.

Digest>New Mexico is a very large state, full of beautiful scenery, mountains, forests, deserts, and other attractive terrain for hikers, skiers, and outdoor enthusiasts of all persuasions. The state sponsors a Search and Rescue system to take care of victims of accidents or sudden illness in remote areas. One of the components of the state system is St. Johns College Search and Rescue team, based in Santa Fe. This article describes some of their activities.

All members of the organization are volunteers and all must supply their own equipment. Until recently, although the organization has been in operation for more than 25-years, only three of the one-hundred members had ham radio licenses. But a review of their experience showed that, through the availability of strategically placed 2-meter FM repeaters, amateur radio provides superior communication performance throughout their service area. Consequently, numbers of the members earned licenses. Now, amateur radio provides a major part of the communication load, to the great benefit of all.

Title>GI2:A Satellite Lifeline to Africa
Author>Stockman, Douglas - N2ZYE/9G5DS
Source>QST Jul 97, pp. 31-34
Abstract>How volunteer social workers in Ghana used ham radio to keep in touch with home, using VHF via amateur satellites.

Digest>Mr. Stockman and his wife recently returned after spending two years in Ghana, West Africa, where they worked as unpaid volunteers in health care and rural development projects. They lived in a tiny village located about a two-hour drive from Accra, the capital.

While there, they wanted badly to have some means of communications with their family and friends in the USA, but soon found that there is no telephone service available closer than Accra, and the nearest place where they could establish a post office box was nearly as far away. Anyway, airmail letters required from three to twelve weeks to get from the USA to the P.O. box! They investigated commercial satellite communications, but the costs were prohibitive.

Mr. Stockman had heard about amateur radio before leaving the States and had obtained a Technician Plus license with the callsign N2ZYE. Upon reaching Ghana, he had great difficulty learning what agency of government was responsible for radio licenses. He approached no fewer than thirty-five government offices before finding the proper one, but once he found it he had no difficulty obtaining a Ghana license. He installed a VHF/UHF satellite station at his new home and made arrangements with two American hams, WA2N and KB1SG, to pass third-party traffic for him, using the KO23 amateur satellite for packet messages across the ocean and the Internet for stateside message delivery.

In spite of many difficulties, the Stockmans described their two year period of service as "two satisfying and productive years in Ghana."

Title>GI3:The Day the US Army Invaded W4TLV
Author>Collins, Barry W. - W4TLV
Source>QST Jul 97, pp. 48-49
Abstract>How the US Army invaded the home of a law-abiding amateur and behaved in a very high-handed manner.

Digest>W4TLV was an early UHF operator. In the early 1960s, he operated kilowatt transmitters on both 2-meters and 70-centimeters with big antennas on very high towers in Demopolis, Alabama. Because of his friendships with other UHF pioneers, he was given an advanced GE lighthouse tube with which he built a high-performance RF preamplifier.

When the Cuban missile crisis broke, he learned that a monster radar station was being built in Thomasville, not far away. Soon he encountered the broad-band buzz of a pulsed signal on the 432-mHz. band that overloaded his preamplifier, no matter in what direction his beam was pointed.

After suffering from this interference for some days, he wrote a letter of protest addressed to: "Thomasville Radar Organization", with a copy sent to the Pentagon. In it, he described the interference that he was receiving, as it appeared on a monitoring oscilloscope that displayed some very unusual characteristics of the pulses.

A few days later, a US Army colonel with two aides came to his door, demanded to see his equipment, and peremptorily ordered his wife and children to leave the house! Apparently, they thought that he was some kind of a subversive and treated him accordingly.

After he had taken them to his hamshack and demonstrated all his equipment to them, including the waveforms of their radar signals on his oscilloscope, they calmed down and became friendly. Finally, they asked him to give them his preamplifier which had higher performance than any equipment they were using. He replied by promising to give them schematic diagram and photographs, and also to help them build a duplicate. They accepted his offer, and left as friends.

Shortly afterwards, the crisis ended and W4TLV never had further contact with any of the three, but did have contact with civilian contractors who worked with the army. He does not state how long it was before his wife and children felt free to return to their own home.

They have a nice mail order catalog- I picked one up at the local Radio
Shack this weekend. It is a bit thicker than the Jameco and JDR
Microdevices catalogs, not as detailed as Mouser or Digi-Key. They have
Standard brand amateur transceivers in there as well as the RS
equipment.

(No call sign yet- I'm taking my novice/technician exam on Saturday.
Wish me luck!)

Just when you almost give up hope, David, N2BCA signs his
message with:

- - - - - - - - - - - - - - - - - -
"New and stirring things are belittled because if they are not
belittled, the humiliating question arises, 'Why then are you not
taking part in them?'"
--H. G. Wells
- - - - - - - - - - - - - - - - - -

David,

Thank you. That quote is precious, and I intend to
plagarize it shamelessly! It's nice to see a youngish
(mid 30's is youngish to me!) amateur express that
refreshing attitude here on UseNet, in contrast to
the non-stop harping by others who talk-the-talk, but
don't walk-the-walk.

Keep the faith!

Someone gave you wildly inaccurate information.

The JARL figures for Mar31 of 95 and 96 (97 licensee # not
yet available) were:

Year Licensees JARL Members Percentage
1995 1,325,527 186,310 14%
1996 1,350,127 166,602 12%
1997 ?,???,??? 158,208

JARL is the Japanese equivalent of ARRL.

Let's admit it...RS exists because there is a need for a POPULIST Electronics source...they are IT. Period. The products they sell are made, in most cases, by well known (Hitachi, Sangean, Panasonic etc.) mfrs. and simply re-labeled by RS. They are common (thank the gods!) becasue it's a formula that works...decent stuff at decent prices. I use Zack Kit electronics in Vallejo, CA...that's about 25 miles away from me for almost ever part need...when I can (I hate to drive), but the bloody RS is only 1 mile away, I use them for little gifts, batteries (excellent...consistently so) and misc., stuff I don't want to spend my driving hour obtaining.

Can you explain to me how this protects the interests of his
contributors?
Do you really think the cell phone comanys give a damn if scanner
listeners can hear their transmissions? Will Motorola loose one dime if
someone does not have a scanner to pick up their digital trunk
transmissions.

What an aburd post, I love how you play the money issue. Like Markey has
something to gain by all this.

Haw haw haw, yes we always refference Hitler and Communism when we want
to make the folks nervous. Do these laws prohibit you from building
equipment to listen to these frequencys? Converters? I dont think so.
They are NOT reception laws they are MANUFACTURING laws.
If your going to post, post the truth instead of this 'fear thy
government' crap.

Our resident newsgroup jammer has been stating all sorts of lies in regards to my personal and professional life. So, to reiterate: I have been a Lecturer (now Step C paygrade, the hightest possible) in the U.H. system for 10 years now; not a graduate assistant, and not a teaching assistant. The semesters I teach on the Manoa campus I am given Calculus or Precalculus classes (precalc includes Analytic Geometry and Trigonometry); at the community colleges I'll teach Precalculus and College Algebra. I have also been a Lecturer at two private universities, Chaminade U, and Hawaii Pacific U.

Lecturers are not tenured. Thus, to retain a Lectureship, one has to demonstrate excellence in teaching. My end-of-semester course/instructor evaluations that all students are asked to submit always have the highest rating possible, even though a good number of my students do not pass due to the very high standards I set.

I hold a BS (3.8 GPA), and an MA, both in Mathematics. I am currently a PhD graduate student (which places me in a unique catagory of being both a Lecturer and a grad student).

I am 43, not 50 as our jammer claims. I have a very lovely girlfriend that our jammer has called awful names without ever having met her. Yes, we are a mixed-race couple, as is very natural in Hawaii (Hawaii has the distinction of having the largest number of racial groups [all living in complete harmony] than any other state).

Contrary to what our jammer says, I have never posted anonymously to this NG. I've tried to contribute beneficial items (such as the dozen or so homebrew QRP contruction articles going back to '93 or '94 to encourage more folks to try home-building), and I've shared my expertise on maritime communications (recall the 7-part series on USCG CW comms, which has appeared in over two-dozen ham club newsletters, and will soon appear in a UK radio magazine).

Any flames that came from my keyboard were in response to someone flaming me ("an eye for an eye"), or in regards to some of the more far-fetched anti-code zealots' remarks.

Our poor jammer is destined to lead a hate-filled life plagued with stomach ulcers. In the meantime, I go sailing and ocean-diving every afternoon (I'm posting this from a laptop* aboard my sailboat - we have phones installed on the dock).

If any of you ever vacation on Oahu, look me up and I'll buy you a pitcher Mai Tais; we can laugh over what we've posted and read on this NG over the

years.

73 to everyone (including our jammer),
Jeff KH2PZ / KH6

Good God, guys! You'd think I was some sort of a criminal or something!

No wonder there are people who don't want to join the "Ham fraternity"... they'd be a convict to even ask about it. Perhaps you have a call sign just to protect your identity. Does the ARRL know you exist? You're doing wonders for promoting the amateur radio hobby, perhaps they ought to know about you guys for a seminar or something. Are all amateurs like that?

The truth, whether you wish to believe in truth or not, is that I'm a DX'er who has an interest in putting together a comprehensive guide to the use of radio frequencies (all bands) throughout my home area, and publish it on the web. Sure, I know something about this stuff, or I wouldn't be using your lingo... its just that I don't have the book sitting beside me to get me through my next communication like you do, nor a license to talk to stuffed shirts like you. Thanks for the info anyhow.

Lighten up--
Ed

I think I've intecepted some airphone traffic in that area and the 944
MHz area back in the late 1980's on a Pro-2004 in AM mode. Other than
that, nothing much.
Chuck, who remembers the airphones were experimental at the time....

2681. Re: [WANT] Shortwave converter for car AM radio

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-13 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.970813222752.1480A-100000@Stratus.CAM.ORG>
Source record: 191863
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner,rec.radio.shortwave,sci.electronics.misc

Of course, the solution to car radios tuned by synthesizer is to make the converter tuneable.

While it can make the design more complicated, after all you have to make a good variable oscillator and have a good dial for it, it does have advantages. If you have a good enough dial, you can tune over a wider range than the the 1 MHz or so that a broadcast radio tunes. If you make it so the car radio is tuned to the top of the AM band, you have less problems with images. WIth the car radio at a fixed frequency, you can put selectivity between the converter and the radio. And you can add a bfo at that fixed frequency for detecting CW and SSB signals.

These schemes were common in years gone by. It is simpler to build a converter than a whole receiver, so these things were often described in the ham magazines so beginners could get a receiver without too much work and cost.

And tuneable converters were quite prominent from commercial concerns. Gonset made some tuneable converters, as did Tompkins (remember the Tuneaverters?).

We need to communicate between an office and one person in
a warehouse environment (max a few tenths of a mile maybe)

Is a business band radio the way to go? VHF/UHF?

Is it hard to obtain a license?

Does anybody make a base station?
(cost comperable to the hand helds or less..)

Did I pick an apropriate newsgroup?

> hardware draws so much power that even with milliwatt power levels of
> input to the final stage, there is not much efficiency.

The efficiency is in the utilization of the channel ... but it's also not
fair to
assess the entire cost of running the computer to the QSO, since the
computer can do many, many more things ... the amount of CPU resource
required for communications is modest, indeed, as evidenced by the
chipsets used in cordless phones and cellphones, where you may have a
70-100 MIPs DSP and one or more microcontrollers running in the same
package along with a complete SS transceiver ... all running from a 3-cell
nicad pack ...

> Throughput shouldn't be an issue if we are talking real-time
> communications. I can use a T1 connection to send you 'War and Peace',
> how fast can you read? No matter at what speed data is passed the
> brain's response time is a finite property.

That's the same as the old "I can't type at faster than 1200 baud" argument
..
it totally ignores the reality that more efficient use of the channel
allows others
to share the channel in a non-interfering manner, given equipment with the
intelligence to behave appropriately (something that far too many human
operators
seem incapable of doing ...)

> Machine-to-machine is networking not communications.

Sure it is ... it's just not as much "work" ... and that "work-ethic"
thing seems to be a biggie to many beepers ...

>Its not much of challenge for me,

There's the other side of the "work-ethic" coin ... ("it must be
difficult to have any value" ...) How ridiculous ... work smart, not
hard.

> Bandwidth is one place more advanced digital modes are more efficient.
> Even so the number of active hams could treble and there would still
> be no overcrowding. There is even enough room for no-coders to play

> networking on HF. 'Our' portion of the spectrum is vastly under
> utilized.

At least we agree on the preceding paragraph ... but the fact that there is no
gross overcrowding does not relieve us of our responsibilities to use our spectrum
efficiently, to advance the SOTA, and to develop our own skills beyond the stone
age of radio communications ...

> Warning - quasi-religious statement ahead: Funny similarity tbetween
> 'our' spectrum and Manifest Destiny. The native Americans did not
> consider the land to be a possession. The Great Spirit was generous
> enough to allow them to live on it.

And if we hams don't take our allocations seriously and make the best
possible use of them, the "great spirit" in DC will likely give them over to
some "palefaces" who WILL make good use of them ...

> Error correction, what can I say. Its is good but it seems like some
> over-kill. Should I code a GUI app to do what a batch file can
> accomplish? GIGO still works on any platform errrrror-correction or
> not ;)

Error correction techniques can allow significant reductions in transmitter power,
which can have many benefits ... less power consumed, less exposure to strong
RF fields, less interference/more ability to spatially share frequencies,
etc., etc.

It's definitely not GIGO ... more like eliminating bugs from a program to make
it work correctly (or like blocking out bad sectors on a disk to prevent
data loss).

I hope you'll reconsider some of your views in light of these humble attempts to
provide clarifying input ...

Here is the full text of H.R. 1964:

HR 1964 IH

105th CONGRESS

1st Session

To protect consumer privacy, empower parents, enhance the
telecommunications infrastructure for efficient electronic
commerce, and safeguard data security.

IN THE HOUSE OF REPRESENTATIVES
June 19, 1997

Mr. MARKEY introduced the following bill; which was referred to
the Committee on Commerce

A BILL

To protect consumer privacy, empower parents, enhance the
telecommunications infrastructure for efficient electronic
commerce, and safeguard data security.

[Italic->] Be it enacted by the Senate and House of
Representatives of the United States of America in Congress
assembled, [<-Italic]

SECTION 1. SHORT TITLE.
This Act may be cited as the `Communications Privacy and
Consumer Empowerment Act'.

SEC. 2. FINDINGS.
The Congress finds the following:
(1) As our Nation's communications networks continue to grow
and
become ever more sophisticated, more individuals and
industries will be using such networks to conduct
commercial transactions.
(2) It is important to establish personal privacy rights and
industry obligations now so that consumers have
confidence that their personal privacy is fully protected
in our Nation's telecommunications networks.
(3) The Nation's telecommunications infrastructure must be
safe
and secure so that economic growth is not threatened due
to consumer concern over the electronic ethics of certain
cyberspace marketers.

(4) The Telecommunications Act of 1996 (Public Law 104-104) contains expanded privacy protections for consumers by requiring that telecommunications carriers under the jurisdiction of the Federal Communications Commission obtain consumer approval prior to reusing or selling certain personal information.
(5) It is becoming increasingly apparent that the existing privacy
protections accorded consumers with respect to information gathered by telecommunications carriers are not alone sufficient to protect consumer privacy rights and that further protections are needed to ensure that such rights are retained and respected by other entities doing business in cyberspace.
(6) In addition to the growing number of businesses and adults
getting online, some 5,000,000 young Americans currently use the Internet and this number is expected to grow to more than 15,000,000 by the year 2000.
(7) Recent media reports indicate that online marketers are gathering personal information from children, in some cases in a deceptive manner.
(8) Child advocacy groups have also charged that liquor, beer, and
tobacco companies are utilizing Web sites to entice children to visit and that such sites' cartoon characters, glitzy features, games, music clips, and other characteristics promote their products and foster underage drinking and smoking.
(9) In addition to the work performed by the Federal Communications Commission in regulating our Nation's telecommunications networks, the Federal Trade Commission continues to have the task of ensuring that online marketers and businesses do not engage in deceptive or fraudulent practices. The Commission's privacy workshop in June 1997 has developed a needed record of industry privacy practices that can serve as the basis for Commission action, if needed.
(10) The ease of gathering and compiling personal information in
cyberspace, both overtly and surreptitiously, is becoming increasingly efficient and almost effortless due to advances in digital telecommunications technology. As a result, information gatherers are able to compile highly detailed personal histories of both children and adults who are network users.
(11) Regardless of the technology that consumers use, their privacy
rights and expectations remain a constant. Consumers must have knowledge that personal information is being

collected about them; consumers must be given conspicuous notice if the recipient of that information intends to reuse it for other purposes, or disclose, or sell it; and consumers must have the ability to control the extent to which personal information is collected about them and the right to prohibit or curtail any unauthorized use, reuse, disclosure, or sale of their personal information.
(12) Our Nation's communications networks, including the Internet,
have developed extremely rapidly over recent years, and changes in standards, protocols, and digital technologies have enabled consumers to make decisions about access to information and services, such as the types of content on the Internet.
(13) New innovative technology may empower consumers and parents to
better control dissemination of personal information by restoring decisionmaking power to the consumer or parent. Technological tools may also help parents block access to Web sites containing inappropriate material for their children.
(14) Industry efforts, with Government encouragement and oversight,
to assist consumers through the development of standards, protocols, and practices for the collection and dissemination of personal information is critical to help parents and consumers better control dissemination of their personal information.
(15) Adoption of strong, fair information policies, standards, and
practices, along with the widespread implementation and utilization of consumer empowerment tools, may limit the need for Government regulation of personal information collection and dissemination practices on the Internet or other telecommunications media.

TITLE I--CONSUMER PRIVACY AND PARENTAL EMPOWERMENT

SEC. 101. FEDERAL TRADE COMMISSION EXAMINATION.
(a) PROCEEDING REQUIRED- Within 6 months after the date of enactment
of this Act, the Federal Trade Commission shall commence a proceeding-- (1) to determine whether consumers are able, and, if not, the
methods by which consumers may be enabled--
(A) to have knowledge that consumer information is being
collected about them through their utilization of various telecommunications services and systems;
(B) to receive conspicuous notice that such information could be used, or is intended to be used, without

authorization by the entity collecting the data for
reasons unrelated to the original communications,
or that such information could be sold (or is
intended to be sold) to other companies or
entities; and
(C) to exercise control over the collection of personal
information and to stop the unauthorized use,
reuse, disclosure, or sale of that information;
(2) to determine whether, in the case of consumers who are
children, the abilities described in subparagraphs (A),
(B), and (C) of paragraph (1) are or can be exercised
by their parents;
(3) to propose changes in the Commission's regulations as
necessary to correct any defects identified pursuant to
this section in the privacy rights and remedies of
parents and consumers generally;
(4) to solicit and review comment from the public and the
National Telecommunication and Information
Administration on the changes proposed pursuant to
paragraph (3);
(5) to prepare recommendations to the Congress for any
legislative changes required to correct such defects;
and
(6) to determine--
(A) whether parents are able, and if not, the methods
by
which parents may be enabled, to block access to
content accessible via the Internet, or other
computer networks, that promotes alcoholic products
or tobacco products; and
(B) whether alcohol and tobacco companies maintain
Internet
sites that promote, glamorize, and market alcohol
and tobacco products in a manner that is directed
at children.
(b) SCHEDULE FOR FEDERAL TRADE COMMISSION RESPONSES- The
Federal
Trade Commission shall, within 1 year after the date of
enactment of this Act-- (1) complete any rulemaking
required to revise Commission
regulations to correct any defects in such regulations
identified pursuant to subsection (a); and
(2) submit to Congress a report containing the
recommendations
required by subsection (a)(5).

SEC. 102. FEDERAL COMMUNICATIONS COMMISSION EXAMINATION.
(a) PROCEEDING REQUIRED- Within 6 months after the date of
enactment
of this Act, the Federal Communications Commission shall

commence a proceeding-- (1) to examine the impact of interconnected communications networks of telephone, cable, satellite, wireless devices, and other technologies on the privacy rights and remedies of the consumers of those technologies, as described in paragraphs (1) and (2) of section 101(a);
(2) to determine whether consumers are able, and, if not, the methods by which consumers may be enabled to exercise such rights and remedies;
(3) to determine whether common carriers have taken adequate steps to secure the communications infrastructure and its components against unauthorized interception of communications and other personal information;
(4) to propose changes in the Commission's regulations to ensure that the effect on consumer privacy rights is considered in the introduction of new telecommunications services and that the protection of such privacy rights and network security is incorporated as necessary in the design of such services or the rules regulating such services;
(5) to propose changes in the Commission's regulations as necessary to correct any defects identified pursuant to this section in such rights, remedies, and security;
(6) to solicit and review comment from the public and the National Telecommunication and Information Administration on the changes proposed pursuant to paragraph (5); and
(7) to prepare recommendations to the Congress for any legislative changes required to correct such defects.
(b) SCHEDULE FOR FEDERAL COMMUNICATIONS COMMISSION RESPONSES- The Federal Communications Commission shall, within 1 year after the date of enactment of this Act-- (1) complete any rulemaking required to revise Commission regulations to correct defects in such regulations identified pursuant to subsection (a); and
(2) submit to the Congress a report containing the recommendations required by subsection (a)(6).

SEC. 103. PARENTAL EMPOWERMENT THROUGH MARKETPLACE SOLUTIONS.
(a) SOFTWARE TO PROTECT CHILDREN- Section 230 of the Communications Act of 1934 (47 U.S.C. 230) is amended--
(1) by redesignating subsections (d) and (e) as subsections (e) and (f), respectively;
(2) by inserting after subsection (c) the following new

subsection:
`(d) TECHNOLOGICAL TOOLS TO BLOCK ACCESS- An Internet
access
provider shall, at the time of entering an agreement
with a customer for the provision of Internet access
services, or at any subsequent time upon request,
offer such customer screening software that is
designed to permit the customer to limit access to
material that is inappropriate for children. Such
software shall be provided either at no charge or for
a fee that does not exceed the cost of such software
to such provider.'; and
(3) by adding at the end of subsection (f) (as redesignated
by
paragraph (1) of this subsection) the following new
paragraphs: `(5) INTERNET ACCESS PROVIDER- The term
`Internet access
provider' means a person engaged in the business of
providing a computer and communications facility
through which a customer may obtain access to the
Internet, but does not include a common carrier to the
extent that it provides only transmission and routing
services.
`(6) INTERNET ACCESS SERVICES- The term `Internet
access
services' means the provision of computer and
communications services through which a customer using
a computer and a modem or other communications device
may obtain access to the Internet, but does not
include transmission and routing services provided by
a common carrier.'.
(b) CONFORMING AMENDMENT- Section 223(h)(2) of the
Communications
Act of 1934 (47 U.S.C. 223(h)(2)) is amended by striking
`230(e)(2)' and inserting `230(f)(2)'.

SEC. 104. EXTENSION OF SCANNER EQUIPMENT MANUFACTURE PROHIBITIONS
TO
DIGITAL MOBILE RADIO SERVICES.
(a) AMENDMENT- Section 302(d) of the Communications Act of 1934
(47 U.S.C. 302(d)) is amended--
(1) in paragraph (1), by striking `(1) Within 180 days
after the
date of enactment of this subsection, the Commission'
and inserting `The Commission';
(2) in paragraph (1)(A), by striking `the domestic cellular
radio telecommunications service' and inserting `a
commercial mobile service (as such term is defined in
section 332(d))';
(3) in paragraph (1)(C), by striking `digital cellular

transmissions' and inserting `digital commercial
mobiles service transmissions';
(4) by striking paragraph (2); and
(5) by redesignating subparagraphs (A), (B), and (C) of
paragraph (1) as paragraphs (1), (2), and (3),
respectively.
(b) EFFECTIVE DATE OF PROHIBITIONS ON REGULATION AMENDMENTS-
The
prohibitions contained in section 302(b) of the
Communications Act of 1934 shall apply with respect to the
changes made by the Federal Communications Commission in
its regulations to implement the amendments made by
subsection (a) of this section beginning 1 year after the
effective date of such changes.

TITLE II--INTERNET INFRASTRUCTURE ADVANCEMENT

SEC. 201. ACCESS AND INTERCONNECTION FOR INFORMATION SERVICE
PROVIDERS.
(a) INTERCONNECTION OBLIGATIONS OF INCUMBENT LOCAL EXCHANGE
CARRIERS- Section 251(c) of the Communications Act of 1934
(47 U.S.C. 251(c)) is amended-- (1) in paragraph (2)--
(A) by inserting `or any requesting information service
provider' after `requesting telecommunications
carrier'; and
(B) by inserting before the semicolon at the end of
subparagraph (A) the following: `, or for the
transmission of information services';
(2) in paragraph (3)--
(A) by inserting after `for the provision of a
telecommunications service' the following: `or to
any information service provider for the provision
of information services';
(B) by inserting `and requesting information service
providers' after `requesting carriers'; and
(C) by inserting before the period at the end the
following:
`or information service'; and
(3) in paragraph (6), by inserting `to any requesting
carrier or
any requesting information service provider' after `the
duty to provide'.
(b) PROCEDURES FOR ADOPTION OF AGREEMENTS- Section 252 of the
Communications Act of 1934 (47 U.S.C. 252) is amended by
adding at the end the following new subsection: `(k)
TREATMENT OF INFORMATION SERVICE PROVIDERS AS REQUESTING
CARRIERS- Any information service provider requesting
interconnection or unbundled access pursuant to paragraph
(2) or (3), respectively, or section 251(c) shall be
treated as a requesting carrier for the purposes of
negotiation, mediation, arbitration, and approval of

agreements under this section.'.

SEC. 202. CONSIDERATION OF INFORMATION SERVICES IN COORDINATED NETWORK PLANNING.

(a) AMENDMENT- Section 256 of the Communications Act of 1934 (47 U.S.C. 256) is amended--
(1) in subsection (a)--
(A) by striking `and' at the end of paragraph (1); (B) by striking the period at the end of paragraph (2) and inserting `; and'; and
(C) by adding at the end the following new paragraph:
`(3) to promote commerce by facilitating the development
and adoption of technologies and methods for the secure conduct of commercial transactions by use of telecommunications facilities, the Internet, or other interactive computer systems.'; and
(2) in subsection (b)--
(A) by striking `and' at the end of paragraph (1); (B) by striking the period at the end of paragraph (2) and inserting `; and'; and
(C) by adding at the end the following new paragraph:
`(3) shall establish procedures for Commission oversight to ensure that the needs of information service providers and their customers, and users of the Internet and interactive computer services (as such terms are defined in section 230), are considered during the coordinated network planning under paragraph (1), including consideration of measures that will ensure-- `(A) efficient and effective interconnection for packet-switched data networks, including the Internet; and
`(B) efficient and effective access by such networks
by their users.'.
(b) DEADLINE FOR COMMISSION IMPLEMENTATION- The Federal Communications Commission shall prescribe procedures for purposes of section 256(b)(3) of the Communications Act of 1934, as amended by subsection (a) of this section, within one year after the date of enactment of this Act.

SEC. 203. REMOVAL OF IMPEDIMENTS TO DEPLOYMENT OF IMPROVEMENTS IN NETWORK AND DATA SECURITY.

(a) NTIA STUDY OF NETWORK AND DATA SECURITY ISSUES- Part C of the
National Telecommunications and Information Administration Organization Act is amended by inserting after section 155 the following new section: `SEC. 156. STUDY OF NETWORK

AND DATA SECURITY ISSUES. `(a) STUDY REQUIRED- The NTIA
shall conduct an examination of
the extent to which network reliability and data security
issues impair the conduct of transactions in interstate
commerce through the medium of the telecommunications
networks, the Internet, or other interactive computer
systems.
`(b) IDENTIFICATION OF GENERALLY AVAILABLE TECHNOLOGIES FOR
THE
IMPROVEMENT OF DATA SECURITY- In conducting the
examination required by subsection (a), the NTIA shall
identify generally available technologies for the
improvement of data security for the conduct of the
transactions described in such subsection.
`(c) REPORT ON EXAMINATION- Within one year after the date
of
enactment of this section, the NTIA shall submit to the
Congress and the President a report on the examination
required by this section. Annually thereafter, the NTIA
shall submit to the Congress and the President an update
on such report. Such report and each such update shall
include-- `(1) a description of any generally available
technologies for
the improvement of data security; and
`(2) any privacy or data security limitations identified
with
respect to any such generally available technologies that
serve to limit or prevent the effective and efficient
conduct of transactions in interstate commerce, except
that the report or update may restrict to a confidential
appendix any discussion of such limitations which would
itself present or create a privacy or data security
limitation.
`(d) PREEMPTION OF DOMESTIC RESTRICTIONS ON ENCRYPTION AND
OTHER DATA SECURITY TECHNOLOGIES- No officer of the
Federal or any State government shall--
`(1) restrict or regulate the sale in interstate
commerce of
any encryption or other product for the improvement of
data security, regardless of encryption method chosen,
length of encryption key, or implementation technique
or medium used;
`(2) condition the issuance of certificates of
authentication
or certificates of authority upon any escrowing or
other sharing of private encryption keys, whether with
private agents or government entities; or
`(3) establish a licensing, labeling, or other
regulatory
scheme that requires key escrow as a condition of

licensing or regulatory approval. `(e) DEFINITIONS-
For purposes of this section:
`(1) The term `generally available technology for
the
improvement of data security' means any computer
hardware, encryption formula, code, or algorithm
(without regard to key length, implementation
technique, or medium), or other device or technique
used to protect data from unauthorized penetration
or disclosure that is generally available.
`(2) The term `generally available' means, in the
case of
computer software (including software with
encryption capabilities), computer software that--
`(A) is distributed via the Internet or that is
widely
offered for sale, license, or transfer (without
regard to whether it is offered for
consideration), including over-the-counter retail
sales, mail order transactions, telephone order
transactions, electronic distribution, or sale on
approval; or
`(B) is preloaded on computer hardware that is
widely
available.
`(3) The terms `Internet' and `interactive computer
systems' have the meanings provided by section
230(e) of the Communications Act of 1934 (47
U.S.C. 230(e)).'.
(b) TRANSFER OF AUTHORITY- Section 105(b) of the National
Telecommunications and Information Administration
Organization Act (47 U.S.C. 902(b)) is amended by adding
at the end the following new paragraph: `(4) LICENSING OF
COMMUNICATIONS TRANSACTION TECHNOLOGIES- There
are transferred to the NTIA the functions of the Secretary
under Public Law 96-72, as amended, with respect to
generally available technologies for the improvement of
data security, as identified pursuant to section 156 of
this Act.'.

So until you get a name and a clue to what the >hell is going on, I suggest you put a sock in it boy. And how >about your life? Do we always refer to our brother? And what >does this have to do with 14.313? Your way too stupid to work hf. >Now hit the road before I make you a personal project.

Don't make me laugh you drop out from psychological counsleing you. hahahahahahaha.

You have room to talk about other people's physical attributes. How many times did you wake up face down in the pavement? More than once if you go by your QSL card photo at www.qrz.com. Why is your face so puffy? You pathetic paranoid pile of parrot droppings.

Your (sic) so entertaining!

Oh, name at least one PATCO controller who joined the service after the strike. NEVER HAPPENED....Not one!! Many military controllers went to the FAA though. Every time you open your mouth ignorance just pours out. Guess that's what the main crop is from your part of Georgia. God must have loved your type, he made so many of them. Keep projecting your shortcomings onto others in this newsgroup...it must make you feel like a big boy....then again....you are a big boy.

Project my ass!

Let a problem is the bloody equipment...I can sort out good from junk alright...it's the moronical sales staff that really gets my ire. I do not want thier "help" at all, I'd just as well throw money at 'em to keep them at bay, no "technicians" these...just hamburger-flippers turned electronics sales-people. This seems so "normal" in thier hiring practices that it makes me wonder just HOW are they so consistent?
friend,
Lute

On the BBC Engineering Information website we have just converted one
of our most popular leaflets regarding weather-related interference
and propagation.

Take a look at http://www.bbc.co.uk/enginfo/tv_recep/weather.htm

The page is 64K including pictures, or 16K with images off (there is a
lot of text in there).

Regards,

BBC Engineering Information.

I know this is not new. I've even seen messages on the subject ...

But in the movie "Copycat" the Sigourney Weaver character has a 'police scanner' which is shown twice in closeup, as she listens to 147.210 mhz ... OK ... Is that a favorite repeater of the motion picture community? Is that the equivalent of a telephone number beginning with 555? Does anyone other than me care?

ok people lets get something straight here. First of all Radio Shack does not "own" the word Shack. What they do "own" is the word Radio Shack. If you were to call your store Radio Shack then they could sue you ass to high heaven. o you can call any shop you want Ham shack, Amateur Shack, even Shit Shack and RS can't touch you. Now secondly, I think that RS is a fine store they have helped me out often and I find that most of their employees are curitous and helpful. Please note that if you wish to respond to me use the following E-mail: Jennins@ex1.wes.army.mil

Q & Z signals have been used on voice as long as I can remember listening SW (ca. 1948 on) ham radio (ca 1956 - 1976) and military (ca 1960-1966). There is nothing in the ITU Q chart limiting the frequency where they are applicable. I find them no worse than the 10 signals used by CBers and Police. 10-4? It is well known however that using the full English text is more understandable (see IEEE on Technical Communications.)

I own stock in Tandy, that is what I think. I is a good investment
and serves a need. It has the same problems that Best Buys, Lowes and
others have. You are going to get technical help at a mass marketer.
You are very lucky if you do, such at Lowes when they hire an older
person who has retired from a skilled trade.

If I need parts, I do what most do in industry. I order from a mail
order house. There are several of these around the country. The market
is too completive for local service. Mass marketers deal in the things
that the public wants. Mail order houses deal in the specialized idems.

OK?

You'll need "Hamcomm" and the simple interface that is included with it
(Plans for building it). The interface uses a single OP amp and just a
few other parts. I havnt got the archive on my computer but if you do a
net search for "Hamcomm" you'll find what you are looking for....73

In my experience Radio Shack has greatly improved over the years (since 1970)

But I'll never forget back in '72 or '73 when I returned some bad (leaky) diodes
to my nearby RS. I explained they were "leaky" the salesclerk looked at
them from all angles, then looked up and said "I don't understand are they
leaking fluid or something"

I had to really hold it to keep from busting up. I explained things to him
and they were replaced.

> > 73, de Hans, K0HB
> >

OK, I think I've now got it straight.

My (1994) numbers are slightly higher, especially concerning JARL Membership.

The IARU, in 1994 listed 3 top nations for amateurs as:

Japan: 1,300,000 League Membership: 194,000 (pretty dismal - sorry)
U.S. : 632,000 League Membership: 172,000
Germany: 64,000 League Membership: 50,000 or about 70%

If you get your figures from the callbook, they'll be lower - the callbook only counts those amateurs which they can find addresses for (obviously).

So I was impressed by the German percentages, not the Japanease ones (the memory is always the first thing to go). They were originally reported as 77%, but that may not have included the reunified country, which I believe these figures represent.

So to get back to the original statement - I STILL wonder what the league would be like with that level of support, and I still wonder what the DARC does differently.

73 to all,

DE N1RUI Jim

147.210 is a pretty popular repeater freq.

We have a 210 machine outside of Denver. I also located one in Minn
and one along the Appalachian Trail.

I also think there is one in Sylmar (that's pretty close...) and one
in San Diego (kinda close)

There are also 210 machines in Bakersfield, Oakland, Covelo and
Stockton (not much movie activity there ...)

But I didn't find one for Hollywood or Burbank.

Where was the movie shot??

Amateur radio display station ve3cne.

Greeting fellow amateurs. This to announce the annual operation of ve3cne. ve3cne is the amateur radio display station at the Canadian National Exhibition in Toronto Ontario Canada. This year we are located at the north east end of the automotive building, near the Princess gates.

I have been involved with this booth since 1969 and have been the station manager since the mid 80's.

We operate 5 stations:

80/40 meters ssb and cw.
20/15/10 meters ssb and cw.
2 meters fm.
packet radio ve3cne@va3bbs.
APRS. We use the local vhf frequency with a relay? station repeating this area onto 10.151 mhz.

The booth was setup today, Wednesday, but the c.n.e. won't be in operation until Friday. We close on Labour day, the first Monday in September.

I will send more information as I get it.

More information can obtained from me lar01@sprynet.com. I appologize, I have not been on packet in a year and a half. Before that I had been very active on packet since 1985.

My computer is presently being repaired so I am presently using my dad's computer.

Larry ve3fxq

The Canadian National Exhibition has a website, as I recall from last year, the address is http://www.theex.com

2710. Alert ! Bad Legislation that will you and other information.

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-13 00:00:00 UTC
From: hsilver@matrix.aracnet.net
Message-ID: <slrn5v31q9.n8v.hsilver@matrix.aracnet.net>
Source record: 191995

I posted information that will effect radio amateurs directly.
The legislation H.R. 2369 AND H.R. 1964 will no doubt heavily
restrict your ability to receive radio signals. But there is
one other projected area that was NOT reported and posted about
this that you should be aware of. That is the Iridium project
that is a world wide effort by the telecommunications giants that
would benefit directly by the passing of these bills and by you not
having access to listen to various frequency bands. Rather than my
posting about the Iridium project check it out for yourself by doing
a web search for Iridium on either Yahoo or Lycos. The project is
highly restricted but do pay specific attention to who the partners
involved are and decide for yourself. Do not sleep on this one. You
can not afford to.

Harley in Toronto.
Victus, Libertas, Possessio.

2711. ALERT ! Potential Threat To Radio Scanning.

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-13 00:00:00 UTC
From: hsilver@matrix.aracnet.net
Message-ID: <slrn5v30nu.n8v.hsilver@matrix.aracnet.net>
Source record: 191996

This is only part of the information from
http://www.ggw.org/nf2g/alert.shtml

Scanning Hobby's Future Seriously Threatened

For about the past 50 years, the United States government has encouraged and aided citizens of foreign countries to disobey restrictive laws that prevented them from listening to information other than officially sponsored "news" (propaganda) from their government. American administrations have sharply criticized the policies of other governments that restricted freedom of access to information, from Nazi Germany's ban on all outside news sources to China's current anti-satellite-dish policy. Until now, we have been led to believe that the United States government is totally opposed to restrictions on private, casual use of any sort of radio receiving equipment and abhors the idea of restricting access to any kind of speech or unclassified information.

But here in 1997, members of Congress are taking significant campaign contributions from well-heeled telecommunications industry representatives and then crafting restrictive legislation that solely benefits those contributors, while infringing the rights and privileges of law-abiding U.S. citizens. Two such congressmen, Representatives Markey and Tauzin, have already made spectacles of themselves by running a mockery of a committee hearing in which all owners of scanner radios were characterized as "electronic stalkers" and where Rep. Tauzin creatively reinterpreted the Electronic Communications Privacy Act of 1986 to prohibit activities which are not even mentioned in that law.

Now these two charlatans are at it again. Representative Markey has come up with H.R. 1964, which at least is honest about its intent - to ban the manufacture, importation, and sale of new scanners that can receive frequencies allocated to the new Personal Communications Service. In other words, Rep. Markey is protecting the interests of his campaign contributors from the PCS industry, the way he has already protected his cellular industry benefactors.

Representative Tauzin's total hostility to the radio hobbyist is demonstrated by his H.R. 2369, which will have the effect of banning any radio receiver that picks up anything other than AM/FM Broadcast, CB, or Ham Radio. This one sounds much closer to the situation in Germany in the 1930s and in Eastern Europe in

the 1950s. If this legislation passes as written, the United States of America will have the most restrictive radio reception laws on the entire planet!

Please read the texts of the two proposed laws, then take a look at the analyses that follow on this page. Your help is vitally important to the future of any kind of scanning in the USA.

Who Really Needs a Scanner, Anyway?

For the most part, we seem to be talking about the preservation of a hobby here. But there are very serious uses for scanners that could become impossible under the proposed legislation. Volunteer firefighters, rescue squad members, and neighborhood watch groups can all use scanners to keep track of what's happening around them, even enhancing their responses to crisis situations. Ham radio operators traditionally (and by force of regulations) work closely with governmental agencies to provide emergency communications during disasters. Without the ability to cross-monitor, this type of support is much more difficult and less effective.

Even if the laws were written to provide exemptions for certain special groups, there would not be enough of a market left for scanner manufacturers to be able to continue providing relatively inexpensive equipment for our use. Many businesses that rely on the hobby radio market (and that don't generate enough revenue to afford large campaign contributions) will be virtually erased by these new laws.

What Does it Mean?

Analysis of H.R. 1964

The following legislative alert regarding H.R. 1964 was posted to the SCAN-L mailing list by Larry Van Horn. It has been mildly edited for formatting purposes.

First I would like to thank my old friend Larry Miller at National Scanning Report for the heads up on this bill that is moving through Congress.

To all my fellow hobbyists on SCAN-L, UseNet radio groups, and the Grove Scanner Groups I have some bad news that DIRECTLY effects the radio hobby above 30 MHz. I'm not going to wait on the presses here at Grove to roll because this legislation needs to be stopped now before it gets out of committee. This bill will probably end the scanner hobby is we know it.

Another assault on the scanning hobby has begun by Congress and our dear, dear friend the honorable Edward Markey (D-MA). Markey has introduced H.R. 1964. This bill in section 104 makes major changes to Section 302 (d) of the Communications Act of 1934 (47

U.S.C. 302(d)). Most of you who are students of the cellular telephone frequency wars should remember this section. If not let me refresh your memory. This is the section of US Code that prohibits the manufacture of any scanner capable of receiving the cellular telephone bands.

Well Markey has taken this to a new level with H.R. 1964. If passed the new language would now read:

(a) The Commission shall prescribe and make effective regulations denying equipment authorization (under part 15 of title 47, Code of Federal Regulations, or any other part of that title) for any scanning receiver that is capable of:

(1) receiving transmissions in the frequencies allocated to a
commercial mobile radio service (as such term is defined in section 332(d));
(2) readily being altered by the user to receive transmissions
in such frequencies, or
(3) being equipped with decoders that convert digital commercial
mobile transmissions to analog voice audio.

(b) Effective Date of Prohibitions on Regulation Amendments -- The prohibitions contained in section 302 (b) of the Communications Act of 1934 shall apply with respect to the changes made by the Federal Communications Commission in its regulations to implement the amendments made by subsection (a) of this section beginning 1 year after the effective date of such changes.

On the surface this looks like a yawner. But lets dig a little deeper into Markey's bomb shell and see what it really says. What is the commercial mobile radio service or CMRS?

>From Bennett Z. Kobb's "Spectrum Guide" let's see what frequencies this effects. Comments in parenthesis are mine.

"The FCC is changing the terminology it traditionally has used to classify radio services. The new terminology is somewhat more opaque. An essential distinction is between PMRS and the commercial Mobile Radio Services (CMRS). Licensees of CMRS businesses provide for-profit, telephone interconnect (mobile and portable telephone or dial-up paging) service to the public.

"Examples of CMRS include private paging services (except for not-for-profit, internal paging systems); Business Radio Service Systems (anything with an IB designation in the Police Call consolidated frequency list folks-Larry); Specialized Mobile Radio (SMR) services (this hits the 851-866 MHz band and that includes most the comms that the new trunk tracker can monitor

including the majority of the public service agencies using trunked systems); and 220-222 MHz land mobile systems, to the extent all of these offer for-profit, telephone-interconnected service to the public; Public Mobile Services such as Paging and Radiotelephone services and the Cellular Radiotelephone Service the 454 MHz and 800 MHz air-ground radiotelephone service; the Offshore Radiotelephone Service; most types of mobile satellite services; and the Personal Communications Services (PCS).

"Previously, most for-profit mobile services were called "radio common carriers." This term has not completely disappeared from use.

"Recent legislation brought all for-profit mobile radio services under the CMRS umbrella. Some former PMRS services were reclassified as CMRS because they are largely devoted to for-profit service with interconnection to the public telephone network. In some cases PMRS and CMRS operations share bands."
<snip>
Please give this information the widest possible dissemination on all hobby forums. The author of this message grants permission to repost or reprint the information below unconditionally.

Here is the latest legislative threat to the monitoring hobby. Folks this bill is pure poison to all branches of the radio hobby. In particular. I'm extremely concerned with section 3 of this bill amending the Communications Act of 1934. Every radio listener and ham needs to contact their elected officials in Washington and voice opposition to this bill.

Unlike the Markey bill, HR 2369 does have cosponsors and given the timing in the legislative calendar, I feel it does have an excellent chance of getting through Congress this session. This bill has the same provisions in it as the Markey bill (HR 1964) plus the new language on scanner mods in section 1 and the new very restrictive language for the Comm Act of 34 in section 3. This effects every radio listener from shortwave right on up to the microwave regions. If your hobby is listening to something other than broadcast radio or television, ham or CB this bill could and probably will effect you.

Bottom line:

I will be posting additional info and analysis after we talk to the legal folks. On the surface, this doesn't look good at all. We are going to have a major fight on our hands here.

Best Regards,

Larry Van Horn

Since several people quoted the same figures, I have to believe mine are incorrect. I'm looking for mine at the moment - I believe they were for 1994, but the disparity is too large to explain as a "different year".

Might I ask the source of the figures you have?

I just purchased a new Yaesu FT-50RD. So far, I am quite pleased with it (for the 24 hrs. I've used it), but I have been told that the antenna is 5db below unity (hmm...). Could you please suggest the best antenna out there. I would like to use it for general-coverage recieve, including air-band and 800mHz conventional. I would prefer something shorter than 10 inches, because I will be carrying it on my belt regularly.

As I don't regularly read the newsgroups, please e-mail your suggestions to TVSJR@SPRYNET.COM

Have for sale in like *NEW CONDITION* RS Pro 2006. This is
the best scanner ever made, even today! Have original owners
manual, repair/parts manual, antenna, no factory box. Display
works like the day it was bought, blue and bright!! This scanner
was hardly ever used!!!!! Sat on my book shelf doing nothing.
Cell mod already done, to open up scanner. If you truly want a
like *NEW* scanner then this is it ! The price is 375.00 *FIRM*!
Please no trades, don't even think of making offer!!!! Will ship
insurance COD only, you pay insurance COD shipping
charge(s). If interested call 609-693-9262 , if you get answering
machine, please leave message. Or e-mail back to cars@cybercomm.net.

Thanks ....Rich

2720. First Personal Here is Jim... QSL?

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-14 00:00:00 UTC
From: K0HB@usa.net
Message-ID: <871572021.21669@dejanews.com>
Source record: 191870
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Talked to a young fella on the repeater the other day who introduced himself by saying "my first personal is Jim and you're my first contact, QSL?".

He seemed like a nice sort, delighted that he had just received his shiny new call sign, and was anxious to make some new friends. Kinda sounded like I felt when I put my new call sign on the air the first time way back when, except probably brighter, cuz Jim is one of those young computer jocks. Me, I still got problems with the LL scale on my Pickett slide rule. Yep, I think Jim sounded brighter than me, quick to catch on to things.

But I don't think Jim will be back on the repeater. Before I had a chance to really get to know much about Jim, or even wrangle an invite to lunch, another station, with an impressive "senior" call sign joined the contact, flashed his shiny Radio Cop badge, and proceeded to issue Jim a "verbal speeding ticket" for improper lingo on the radio. "Radio Cop" said the term "personal" (and for that matter "handle") were unwelcome in ham radio, and that Q-signals were not to be used on VHF voice. Just generally made my newfound friend feel like an unwashed interloper. (Gosh, I've been saying "handle" since I was a conditional class. Slow to catch on, you know.)

Now I should point out that "Radio Cop" took pains to appear very well meaning. Didn't use any bad words that I noticed, was quite polite, even seemed like he was trying to be "helpful." In other words, he thought he was doing Jim a favor by pointing out his transgression from our sacred Amateur Radio way of doing things. I think Jim felt just the same way I did back in a new school in third grade when the well meaning teacher pointed out that "we don't keep our pencil behind our ear in this room." Sure enough, I looked around and none of my new classmates had pencils behind their ears. Sure was embarrassing, and at that moment I really wished I was back with my good old buddies in second grade. Now, if I'd been allowed to hang out a couple of days, I'm sure I would have learned how to properly stow my pencil. And if Jim would have hung around a couple of days on our repeater I just bet he would have noticed that his lingo, perhaps learned in another radio service, was a bit out of place, and pretty soon Jim would sound "just like the rest of us." Like I said, he seemed pretty bright to me, quick to catch on to things.

"Radio Cop", you have kept our hobby uncorrupted. I heard Jim down around 27 Mhz this morning trying to sell his barely used 2-meter HT. I'm gonna miss my new friend Jim, because I think I could have learned something from him. Maybe you could have

also.

Like I said, he seemed pretty bright to me, quick to catch on
to things.

The key question to me is "How does DARC draw such a high
membership ratio?". (Boy, what a kick-ass organization ARRL
could be with membership revenues like that!)

I know that some governments require membership in the national
club as a condition of licensing, but I do not believe Germany is
one of those countries.

Any DL folks here who can give some insights?

They are a set of three letter groups used in a manner similar to the Q signals. They are used primarily by Air although the US Military was using them 35 years ago. I haven't been in close touch. At least one of the books on Utility Stations has a list of them (I saw it advertised in Popular Communications.)

The only one I can remember right now is ZNN which meant "nothing now" meaning the transmitter had no more traffic. Sent by the receiver meant "do you have any more traffic."

Hope that helped.

Jeff,

I believe what you say, as I know other lecturers and GTAs that are stateside. They seem to be well-adjusted and satisfied with where they find themselves in life, and try to pass along those positive feelings to others.

O'brien [our resident SPAMMER] is the one we should all feel sorry for, as he appears to be quite deperate over his current position in life. As much as I appear to hate this person [read some of my recent rebuttals to O'brien], I really do hope that he gets his act together.

I do, however, find this little flame war entertaining and a great mindless respite from other more demanding things that I have going on right now. I don't know about everyone else, but I find being able to "fire away" and speak my mind to be quite therapeutic.

The nice thing about all of this newsgroup stuff is that we can take it or leave it. My new versiton of Agent newsreader very thoughtfully provides a method to kill messages from certain undesirable indivuiduals. The free version did not provide this, so the $29 was well-spent in my opinion. I'll keep "listening in" for the entertainment value, all the time knowing that I can take it or leave it when I want to.

Best of luck to you and your mate there in Hawaii. I was there about 10 years ago for a couple of weeks and thoroughly enjoyed myself. Even managed to try a bit of windsurfing, but found that I needed much more practice. When my wife and I get back over that way, we will try to look you up.

Jeff,

This guy O'brien makes me want to puke everytime I read one of his ignorant redneck postings. I am glad that we have the time-distance thing going for us here. Gives us all time to cool off a bit before getting physical. I bet that he wouldn't be acting this way in public, because some other redneck would end up killing him! Jail is full of folks who have proved this time and again. People like O'Brien feel that they have nothing to lose, only to find out that they have everything to lose

Remember the stories from the 70s where one redneck tracked down and killed another after getting some sort of argument started on CB. Well, what are newsgroups except the CB of the 90s? I certainly do not wish that sort of thing on O'brien, but stranger things have certainly happened. James, please be careful in your postings, because there are some folks out here that are bigger, badder, and crazier than you, and they may not practice the same level of self-restraint that the rest of us do.

With all that said, do you think that this whole stupid thread will ever end? I guess not, with us feeding in to it all the time!

2729. AO-10 SATELLITE - any monitor?

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-14 00:00:00 UTC
From: mpfb8@central.susx.ac.uk
Message-ID: <5sv3uf$s5l@infa.central.susx.ac.uk>
Source record: 191879

Hi all. I was looking at the AMSAT web site today and the current status of the various satellites. Just picking on one, AO-10, it says it is very active, especially over NA, with very strong down-link signals.

As I hope to have facilities to receive the downlink for this (and other 2m satellites soon) I wonder if anyone who montors or works this satellite can tell me what sort of receive antenna, i.e. gain, is need to receive these signals at good strength.

I do appreciate that the antenna needs to be pointed at the satellite and I have a tracking program for that.

I guess that circular polarisation is a requirement and any on-hands advice from users would be appreciated.

So far I have only monitored the 10m downlink satellites, in particular RS12.

Thanks in advance,

Peter G4BVH

Well Helene,
I would imagine that your "temporary identifier" there in the USA has
some sort of obscure callsign and therefore you would no doubt attract
a lot of prefix hunters or people who like to "collect" QSO's with
station using unusual callsigns. There are many out there that spend
hours looking for and trying to log odd prefix callsigns like special
event satations often use... As a matter of interest, what was your
temporary identifier"?

> believe these figures represent.
>
> So to get back to the original statement - I STILL wonder what the league
> would be like with that level of support, and I still wonder what the
> DARC does differently.

The formula for the DARC's success is very simple:

The DARC makes membership real attractive, that is all.

The DARC runs one of the most efficient QSL-Bureaus in this world. And DARC members can use it for FREE. No one dollar per pound, no postage credits to be paid to incoming bureaus. No inland QSLs to be sent direct or not all....

Use of the DARC QSL Bureau is included in the annual DARC membership dues. Everything you send via the Bureau is sent free; and unlike the USA Bureaus, the DARC bureau even handles DL to DL QSL cards, and of course, free. I guess, that USA hams only can dream of having their QSL cards to other USA hams handled free.

But then, the DARC QSL bureau is highly mechanized, with machinery you would expect at some USPS sorting node. To make this possible, QSL cards are not sorted individually for each recipient. They are only sorted down to the local radio club level, and it is not the individual member, but the radio club, which he belongs to, that receives his QSLs.

Which makes sense, as radio amateurs residing in Germany can join the national association ONLY by joing a local radio club .... which in Germany are all LOCAL CHAPTERS of the DARC. There are a few amateur radio clubs in DL, which are not DARC chapters, like the Wiesbaden ARC (American club for Armed Forces stationed in the Wiesbaden area).

Clubs all are "Ortsverein <name of the town or region> des DARC" or "Ortsverein <name of the town or region> des VFDB" ... VFDB??? It is a formally separate organization for the telecom workers, but it is so closely affiliated with DARC, that it would be goofy to treat them separately. The VFDB basically is treated as if it was another regional within the DARC structure of regional sections.

Among the officers of each local radio chapter, you will find the position of a "QSL Manager". He is the liaison officer between the members of this local chapter and the QSL-Bureau. The DARC Bureau does not accept QSL cards from individual members. Actually they do, but if you send them a batch of QSL-cards, they will respond with a letter to the effect, that this is not the formal organizational routine, and that if you do it again, your QSL cards would not be processed.

Meetings of local clubs are usually crowded. A presence of 80-90% of the members is normal. Reason: Club meetings are QSL-days. At the meeting, the QSL manager hands out what has come in for the members of the club and collects outgoing QSL-Cards from the club membership. Individual members of the DARC are not suppossed to send their parcels of outgoing QSL cards directly to the Bureau.

As a SWL in DL, I sent several thousand SWL cards via the DARC bureau. While my membership lasted, my cost for this was about 500 dollars (nearly ten years), and at the postal rates of those times, I drew a value of service, that -- compared to what it would have cost me if bought from the post office -- was worth _at_least_ (!!) ten times of what I gave the DARC in dues...

Then, included in your membership is the monthly mag. Which is a MUST for DL-hams more than QST is for US hams, because each member is entitled to one free three-line ad each month. Can you imagine the result of this? Half the mag is For Sale, Want To Buy, Need Info advertisements. Filled with good deals, bad deals, phantastic deals, adurde questions, fascination questions. The yellow pages of the DARC mag ALWAYS are fascinating reading, and those THREE-LINERS are often more interesting and entertaining than the mag itself....

... and sometimes out of this world in their results, when you place an ad there. When I was asking for info on the Russian UW3DI transceiver in the 1980s, the result was baffling ... But as it is a different story, I take the liberty to skip it.

Those yellow pages are separately stitch-bound and can be pulled out from the mag. They are printed on yellow paper, and those Yellow Pages are the pages, which have each and every line read. Though CQ-DL (the mag's name) is reason enough to join the DARC, I would assume, that the free QSL-bureau is the main attraction.

Since the postal administrations within the European Union went ballistic with their overseas rates in 1993 (in some instances you had to pay 8-times of what it cost the day before), the DARC membership is even more a money saver now than it was when I was a member.

-- Postcard rates within Europe: about 45 Cents
to overseas..: about 130 Cents

-- Letter rates within Europe..: about 60 Cents
surface to overseas: about 130 cents
airmail to overseas: about 190 Cents

With these potential expenses for QSLing direct, it just needs about 50 QSLs sent via Bureau to recover the DARC annual dues. Maybe a little more, for at current postal rates in Germany, it simply needs:

150 QSLs DL to Europeans at postcard rates, or
120 QSLs DL to Europeans at letter rates, or
60 QSLs DL to overseas at airmail postcard rates, or
60 QSLs DL to overseas at surface letter rates, or
40 QSLs DL to overseas at airmail letter rates

to recover the annual DARC dues ... But then, for your dues, you get a lot more in service, than just the Bureau and the Mag ... even some basic ham radio liability insurance.

I guess, if the ARRL also would mechanize the QSL bureau service, and include its free use in the annual dues, the ARRL's ratio of membership vs ham population also would jump dramatically. But before our ARRL could do that, it would have to change quite a number of organizational structure details, and would of course have to raise the dues a bit...

But if I had a choice between an ARRL membership

... at 30 bucks with extra expenses for QSLing, _OR_
... at 65 bucks with no extra expenses for QSLing ...

... guess, what I would choose??? 65 bucks, that's what the current DARC annual membership dues (120.-- DM) translate into.

The ARRL can become as attractive to American hams as the DARC is to German hams, but it would need a real massive organizational change, and quite a bit of investing into expensive equipment. But I would not mind a doubling of ARRL membership dues, if that would entitle me to free use of an efficient QSL Bureau for stateside and DX QSL cards.

Ed Hare then continued wondering:

> I wonder what else might be different, in addition to the differences in
> the organizations involved? What are the license terms in Germany?

Three lic classes, A, B, C.

The no code is the C-Class. There is ONE SINGLE WRITTEN EXAM. You have to have 50% of the available points, and it will get you the C-Class ticket, without code. 144 MHz and up is yours to use. Power restricted to max 75 Watts PEP.

The next higher class is A, you have to achieve 65% points in the written exam. CW requirements, you have to copy and to properly send with a straight key at a speed of 30 characters per minutes (= 6 wpm):

-- one minute of random five-letter groups
-- one minute of open language
-- one minute of simulated ham radio traffic

With this class you can use:
3,520 .... 3,700 kHz CW, and 3,600-3,700 SSB, too
21,090 .. 21,150 kHz CW
28,000 .. 29,700 kHz all modes
144,000 . 146,000 kHz all modes
430,000 - 440,000 kHz all modes
Max output is restricted to 150 Watts PEP

The highest class is B. 75% of possible points in the written, CW copy and straight key send of 3 minutes as for class A, but at 60 characters per minute (= 12 wpm), and then you can enjoy all privileges available to hams in DL .. which means a max leagal power of 750 Watts PEP ...

Licenses have no expiry date, and -- like German drivers licenses -- need not be renewed. They never expire by themselves or by some set limitation. To have a license kinda lapse, the ham can either...
(a) ... return the license to the issuing authority,
(b) ... stop paying his monthly license fee (3 DM, about 2 US$), or
(c) ... die.

> shorter license term will mean that those who die are not left on the
>roles; those who become licensed by never active will not renew, so be
>dropped from the roles sooner, etc.)

There is no renewing. Once awarded, you have your lic for life, provided you pay your license fee.

> What are the percentages of licensed hams who become active in Germany
> as compared to the US?

Holding a call costs money in Germany. If people lose interest in their hobby, to save paying the monthly fee, they usually return their licenses to the issuing office. I would say, that 90...95% of the German ham radio calls are actually active, though some maybe be active sporadically only.

> How easy is it to get an entry-level license in Germany?

My personal opinion is, that the German entry level license (C) is harder to get than the Tech in the USA. Just consolidate all the questions from all FCC question pools into one big question pool (Novice through Extra), and then randomly choose questions and require, that the Technician applicant reaches 50% of the available points. Each question has points assigned, sometimes one point, sometimes several points, depending on how demanding the question is ...

While it seems to me, that the American question sets are designed in a way not to over-challenge any candidate for the class he is targeting, you might be confronted in your C-class exam with questions, which in the USA you only might encounter in the Advanced or Extra tests. But as in a worst case scenario, you might have to answer questions for your No-Code Class

Lic, that in the USA might only be asked for Advanced or Extra, you have to be prepared even for those.

Besides, before granting a lic, the issuing authority requires you to request from the Attorney General's Office on your criminal history. If your record is not clean, forget ham radio. You wont get licensed in DL.

Minimum age for a license is 14 years. And until you come of age (legal age in Germany is 18), you are suppossed to work from a club station, meant to operate under supervision of the club station trustee. But this requirement, as I noticed, obviously is open to wide interpretation. Club stations may or may not be portable, but their call signs are ... more often than not.

> If it is harder than in the US, you will see less family of active
> hams get a license so a spouse or child can call a family member on
> the local repeater.

I think, it is harder in DL to get a license. No VE exams, which you can go to three days after you failed the prvious one ... There is a waiting period of this and this many weeks (set by the examiners commission, and based on how miserably you failed) before you even can apply for a re-examination. And you have to travel to the examining office like it had been in the USA in times past.

> I offer that many of these types of US hams are not apt to join > a
> national organzation. What social differences and customs differnces
> between different countries might form part of the explanation?

None ... When I came to the USA, I noticed all the differences between DL and W-land. And then, after some three months or so, I noticed how much alike both countries are ...

The success of the DARC is based on that it delivers value to its members. A value, that DL-hams can measure in Mark and Pfennig (in Dollars and Cents).

If I had been in DL and sent the amount of QSL cards to inland stations and to a handful of DX like I did this year for six meter contacts, the DARC and its QSL Bureau would have saved me about two times of what I had paid to the DARC in membership dues.

When the benefits can be calculated in dollars and cents, and with the actual savings derived from a membership giving you a Return-On-Investment ("Postage saved by using the Bureau" minus "Dues for 1997") of several hundred percent ... well, can you think of any argument for joing an organization than this one??? Seen this way, for German radio amateurs a membership in the DARC is a better investment than the Stock Market can offer....

I have a Kenwood TR-2600A I picked up at a swap meet. I have a couple of questions: Where can I get a schematic/alignment instructions. Radio seems to be about 5Khz off. I had to do so much to this thing to correct someone else's repairs that I wouldn't be surprised if there was some tweaking that went on inside. Radio otherwise now seems to work fine.

Thanks

Sadly Ed, I think you're right - lots of things go into making up the differences.

Perhaps one of the German Amateurs who monitor this thread might enlighten the group - I know there are some on here, and at least one is an ARRL member as well.

Membership does include FREE incoming AND outgoing buro service (non-members would have to QSL direct I imagine), plus 3 free lines per month in the club magazine for each member to post WTB, or FS info, or to generally rant and rave. Dues are about twice ours, but given Germany's Postal Rates, this is a really good deal. I won't say much more, in hopes that one or more DARC members will tell the whole story.

-With that kind of representation level though, it's a cinch their government probably thinks twice before trying to, say... oh...sell the spectrum out from under them?!?

The ARRL and LAMBDA have "ganged" up to bring
us a new amateur award....the WORKED ALL FAGS....
or WAF Award!

Applicants are encouraged to work as many queers
as possible. The initial certificate is for working
100 faggots....with endoresements for each
additional 100 "booty busters".

Special endorsements are awarded for working LAMBDA
"butt bandits".

Just send $10 plus a vial of semen to:

ARRL
POB 69
San Francisco, CA

Hint! Most of the amatuer fags can be found right at ARRL Headquarters!

We have released Version 1.2b of our Solar Warning and Realtime Monitor software, which will provide radio communicators with realtime (as it happens) solar disturbance warnings and ionospheric information (maximum usable frequencies, critical F2-layer frequencies, occurrences of sporadic-E, spread-F, etc) from a network of worldwide ionospheric observatories. Detect and observe solar flare activity that can blackout radio signals. Detect and observe bombardments of energetic solar protons from solar proton flares that can devastate polar and high-latitude communication paths. Detect and monitor the condition and level of activity of the geomagnetic in realtime. Track and plot active solar sunspot regions and other activity that occurs on the Sun, as well as solar statistics such as sunspot numbers, solar flux values and a host of other parameters.

This new DEMO improves over Version 1.2 by allowing multiple windows to be displayed and updated in realtime, simultaneously.

The DEMO is free for the taking, for a limited time at:
http://solar.uleth.ca/solar/www/swarm-demo.html

Details regarding this software can be found at:
http://solar.uleth.ca/solar/www/swarm.html

One of the most comprehensive centers for obtaining information on the state of the Sun and the ionosphere can be found at:
http://solar.uleth.ca/solar

I will tell you which NOT to buy. I have the Comet SMA 503. It is the thin "rat tail". It is equal or less as effective as the stock antenna. I tried the Diamond products whcih did not work due to the connector on the 50. Also, I recently tried an adapter to utilize a mobile antenna and it also did not connect properly.

Two pieces of advice though. #1) I bought the very small Comet 501 which is 1.75" long. It is very handy in close in situations. Simplex over short distances, Hamfests, "covert" use like when you don't want your XYL to know your radio is in your pocket. #2) When you utilize a second party antenna on the 50 there is a small gap on the connector between the radio and the antenna base. To fill this gap I have purchased cheap colored foam pencil cushions (they ease finger fatigue from pushing a pencil). Just cut off 1/8" or so and it makes a great space. The soft foam conforms great when you screw the antenna down.

Hope my ramblings help. HT KF4SXT

2746. ** FLEA at MIT ** Sunday August 17th Cambridge MA

This coming Sunday..

*** !!!! WE ARE BACK IN THE GARAGE !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
August 17th, 1997
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Seperate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)

Harvard Wireless Club (W1AF)

I, too, would love to find out what the ARRL could do if we had 250,000
members instead of 175,000. :-)

I wonder what else might be different, in addition to the differences in
the organizations involved? What are the license terms in Germany? (A
shorter license term will mean that those who die are not left on the
roles; those who become licensed by never active will not renew, so be
dropped from the roles sooner, etc.) What are the percentages of
licensed hams who become active in Germany as compared to the US? How
easy is it to get an entry-level license in Germany? If it is harder
than in the US, you will see less family of active hams get a license so
a spouse or child can call a family member on the local repeater.
I offer that many of these types of US hams are not apt to join
a national organzation. What social differences and customs differnces
between different countries might form part of the explanation?

I do not offer that these are the only explanations for any differences
in US vs other countries relative membership percentages. I do
offer,however, that most real-life questions such as this do not have a
single answer. I suspect that the differences between the conduct of the
organizations involved is only a part of the answer.

Source record: 191898

I went through this for the first time just under two years ago, so I hope this will be of help.

The problem divides into two entirely separate issues - 1) the electronic path from radio into PC and 2) the software for performing the translation to ASCII text on the screen.

The Path:
There are three ways that I know of - 1) the audio is introduced into the input of a Sound Blaster sound card, 2) the audio is sent to a simple circuit known as a HamCom interface, which is nothing but a cheap little IC and some diodes so that the audio is effectively squared up, and 3) the audio is fed into a Terminal Node Controller (TNC) of the type normally used for such things as RTTY and Packet Radio.

The Software:
The software for use with Sound Blaster is very sophisticated and I believe one such package performs a Fast Fourier Transform (FFT) on the audio and delivers a very clean signal for the translator to work on. I don't know of any software that works on the signal from HamCom but I am familiar with some software for that interface that displays Weather Faxes from HF weather FAX broadcasts. The software that comes with a TNC is typically available in either DOS or Windows versions and will generally perform all translations you would ever want, such as CW, RTTY, Packet, PACTOR, etc. For example, I have the Kantronics Kam Plus with a software package called Host Master 2 Plus, which does a great job on all of those modes. However, that's the most expensive route. Using a Sound Blaster card (since they are now under $100 here in the USA for the 16 bit model) is by far the most satisfying. However, the only software for it is either shareware or rare-ware, if you get my meaning. The one piece that I used came from the QRZ CD-ROM and was quite good for CW. However, there is other stuff available from the internet that sounds good and is $120, but I don't know that it covers CW, since it's advertised as for RTTY and Packet, I believe.

If you are interested, I think I can be more specific about the Web site and the name of the software from the CD-ROM.

Eric Oyen <n7zzt@psn.net> still doesn't get it:

>I see there is a copycat.
>Too bad I don't have an aol account. however, I am sure that the person
>using my call will be receiving a note from AOL for violation of
>TOS.Since I am now on that subject, A copy of this posting (and all the
>headers) is being sent AOL Admin and their abuse e-mail site. I hope you
>have a good time with it, as it will be your last.

Wrong again, OYE BOY! No violation of TOS has occured here. Nobody is using"your call." Nobody is claiming to be amateur radio operator N7ZZT. Nobody is claiming to be Eric Oyen (why WOULD they?) The author of that post simply chose N7ZZT as their AOL screenname. Could have just as easilly been ABC123. AOL's TOS allows a member to select any screenname they wish, the only restructions being against screennames that are obscene, profane, or already in use by someone else.

Once again, you have no legal grounds and no proof to back up your wild accusations and assumptions.

I bought the SMA to SO-239 adapter and use my 50 with a dual-band
mag mount mobile. Works great.

I use this one on my yaesu FT-10r 2 metter version it's A Dual Band
Antenna for hand-helds made by mp Model MFJ-1717 144/440 MHz High Gain
this is a simaller antenna to the diamond products but does not cost as much.
the one I use works great on my ft-10r yaesu radio.

I've just bought a Yeasu FT-11R for recreational purposes (hang gliding),
and I'm having trouble understanding two modes of repeater operation:

DTMF - Dual Tone something something
CTCSS - Cont. subaudible Tone something something

The manual only briefly goes into these different forms of communication.
Could someone please give me a readers digest explanation of the above,
or if not, where I could find some info on them (like the FAQ, maybe).

Thanks

Hi,

Does anyone know where I can find a consolidated collection of info on
the computer control of various rigss..? I have the codes for two of
the rigs I own (the Yaesu-736R, and the Icom-702mkII) that are "new"
enuf' that the manufacturers included the info in the manuals, but
pointers to other complete info, especially for Kenwood HF rigs, and for
HTs (not programs that others have written, I'd rather not reverse
engineer them, and, IMHO, its also a rude thing to do) would be helpful
for a set of articles I am working on on how to construct some kool
station controls using a web browser and JAVA.

73,
David

Well first question is: are you a ham and if so, whats your call..

> and I'm having trouble understanding two modes of repeater operation:
>
> DTMF - Dual Tone something something
> CTCSS - Cont. subaudible Tone something something

DTMF...generic name for Touch Tone (a registered trademark of Lucent)
Dual Tone Multi Frequency...

CTCSS...generic name for Tone Squelch...also called PL (Motorola
registered trademark)...Continuous Tone Coded Squelch System

These are NOT modes....nor are they only used on rptrs....
Please consult the Elmer or person who you worked with on getting
your license...they didnt do a good job...

Try Amidon Assc. or RF Parts. Both advertise in QST and/or CQ and 73 Magazine. You might try a web search - I'm pretty sure RF Parts has a web page. I'm curious about how old the schematic for the transmitter is? Most modern gear calls for torroidal inductors as opposed to slugs. Good luck,

SAREX TEAM WINS NASA AWARD

The Shuttle Amateur Radio EXperiment, or SAREX, program has won a NASA Group Achievement Award based on SAREX activities during the recent STS-94 shuttle Columbia mission. SAREX Principal Investigator Matt Bordelon, KC5BTL, received the award on behalf of the SAREX Working Group and others who supported the SAREX payload during the mission. These include AMSAT school mentors, ham volunteers who staffed the Johnson Space Center Customer Support Room during the mission (Will Marchant, KC6ROL, and Charles Sufana, AJ9N), the ARRL Educational Activities Department staff and other HQ staff members (Jennifer Gagne, N1TDY, and Rick Lindquist, N1RL), and ham volunteers from Johnson Space Center and the Johnson Space Center Amateur Radio Club.

JSC Director George Abbey presented the award during the STS-94 mission debriefing session at Johnson Space Center on August 12. Individual members of the SAREX team and those who helped support the SAREX mission will receive certificates for their role in the flight activity.

Three hams were among the members of the Columbia crew for STS-94: Jim Halsell, KC5RNI, the mission commander; Janice Voss, KC5BTK; and Donald Thomas, KC5FVF. The crew nominated the SAREX team for the award in recognition of "all the planning, preparation, and execution required to perform these missions" and "to thank the people who made it happen," Bordelon said.

The citation reads: "For your outstanding support during STS-94 that allowed us to contact 17 schools around the world and make multiple contacts with Mike Foale aboard the Space Station Mir."

All 17 scheduled SAREX school contacts were successful, including the first-ever SAREX contact with students in the People's Republic of China (see The ARRL Letter, Vol 16, No 29). The hams aboard Columbia also managed contacts with US astronaut Mike Foale, KB5UAC, aboard the Russian Mir space station, as well as several random contacts with earthbound hams.

STS-94, the 24th SAREX mission, flew from July 1 until July 17. It was a "refly" of the aborted STS-83 mission in April.

KB5UAC EXPECTS NEW CREWMATES TO BE ACTIVE ON HAM RADIO

US astronaut Mike Foale, KB5UAC, continues to be sporadically active on Amateur Radio from the Russian Mir space station. Foale has been using 145.985 MHz while over the US, and the 145.200/800 MHz split pair elsewhere.

In a recent packet bulletin, Foale also said he expects his new Mir 24 crewmates, Anatoli Solovev and Pavel "Pasha" Vinogradov, to be active on the radio "once they are settled in."

The new crew members arrived August 7 aboard the ailing Mir to replace the Mir 23 contingent of Vasily Tsibliev and Alexander Lazutkin, who returned to Earth August 14. Foale will remain aboard Mir until September. "We are conducting handover activities now," Foale related in his message. He said the team will prepare for a so-called "internal space walk" on August 20 to relocate power cables from the damaged Spektr module to Mir's Core module. A decision on whether Foale would get a chance to participate in a later space walk in September was pending this week. The Mir crew has been attempting to clear up vexing problems with its onboard oxygen-generation system.

"Lots to do here," Foale said in his hurried posting. "I try to monitor each day." Foale has been experiencing problems with his TNC, which has been losing messages. A new TNC was to have been delivered along with the Mir 24 crew members, but that did not happen.

NASA, meanwhile, reports that Foale's scheduled replacement, astronaut Dave Wolf, KC5VPF, is undergoing intensive training in Russia in preparation for swapping places with Foale in late September.--AMSAT News Service; NASA

CW RETURNS TO MARS NETS

CW, which was officially banned last fall from the Military Affiliate Radio System, or MARS, has now been allowed back, at least on a limited basis. "It's a good thing, I think," allowed Lt Barbara Carter, acting chief of Navy-Marine Corps MARS, who said she's been fighting on behalf of CW enthusiasts protesting the order to cease CW activity as of October 1, 1996. Permission to resume the use of CW on Department of Defense MARS frequencies for everything but formal MARS message traffic was handed down at a joint service conference in early July. "They met us halfway," she said of the decision.

A message to all Navy and Marine Corps MARS members in July said that the Department of Defense "has no objections for CW use on MARS frequencies but only for unofficial use and practice. No emergency/official messages are authorized in CW." Carter confirmed her interpretation that MARS members may use CW for code practice and informal communication "or just because they really enjoy using it."

Bob Stakel, KD1KV/NNN0TDU, of Falmouth, Maine--the assistant Region 1 MARS director--said CW was being used on no fewer than one net a month in Northern New England. "We lost people" because of the CW prohibition, Stakel said. Now that limited use of CW has been reinstated, "we are using it," he said.

In MARS Region 3, Navy MARS member Frank Thrash, W4DLZ, of Metairie, Lousiana, had high praise for Carter's efforts on behalf of CW. "This woman really stuck her neck out," he said. "Our nets are working pretty much as before [the ban]."

Carter, who's not a ham but is interested in becoming licensed, confirmed that some MARS members quit when CW was prohibited. She said that when she took over as Navy-Marine MARS chief, the return of CW was among the first things she heard about. "All they were asking was for a small bit that most of them learned while serving [in the military]," she said.

Thrash is among those who believe CW is far from obsolete. "It's the ultimate weak-signal mode," he said.

HOW TO COMMENT ON RM 9150

Amateurs wishing to comment on the ARRL Petition for Rulemaking (RM 9150) asking the FCC to improve how it addresses serious Amateur Radio rules violations (see The ARRL Letter, Vol 16, No 16) apparently will have to do so the old-fashioned way--written copies. The FCC has made no provision to receive electronic comments on RM 9150. The petition, filed in late March, calls on the FCC to "create a streamlined, privatized enforcement process" to handle and adjudicate serious Amateur Service rules violations, including malicious interference. Thanks to Pacific Division Webmaster Paul Wesling, KM6LH, a complete electronic copy of the petition is available on the Web at http://www.pdarrl.org/pdu/rm9150.html.

Comments to the FCC should reference RM 9150. Send an original and four copies of comments by August 31, 1997, to Secretary, Federal Communications Commission, 1919 M St NW, Washington DC 20554. Reply comments are due by September 30, 1997.

MILWAUKEE ORDINANCE RESTRICTS TOWERS

A new ordinance going into effect later this year in the city of Milwaukee, Wisconsin, will require a special use permit to construct any antenna towers in the city that exceed the zoning district height limit--typically 40 feet. Towers more than double the zoning district height would require a zoning variance. Those familiar with the situation say the new uniform tower law apparently was a reaction to a recent spurt of applications for cellular telephone towers in the city. The city's current tower ordinance exempts towers of licensed amateurs.

Obtaining a special use permit or a zoning variance to erect a tower of more than 40 feet also means the applicant must pay a $300 fee. Applications are subject to public hearings. A special use permit or variance also must comply with other requirements, including setback criteria for freestanding towers. Towers mounted on buildings would be permitted only if they are less than 20 feet in height or 25% of the height of the building or structure, whichever is less.

The new ordinance exempts existing towers in Milwaukee as "legally nonconforming." Mayor John Norquist signed the ordinance on August 5. It becomes effective November 1.--thanks to Jim Romelfanger, K9ZZ, Rick Kissell, WB9GYT, and Scott Frakes, KB9PRG

DARA SCHOLARSHIP WINNERS ANNOUNCED

The Dayton Amateur Radio Association is pleased to announce its scholarship winners for 1997. Congratulations and best wishes to these scholarship recipients:

Griffith Davies, KC7NWC, of Myrtle Creek, Oregon, was awarded the Robert F. Zimmerman Memorial scholarship. A Tech Plus licensee, Griffith has been accepted at Oregon Institute of Technology and plans to study electrical engineering.

Michael Gossenauer, N0UNY, of Aurora, Colorado. A Technician licensee, Michael has been accepted at the University of Colorado and plans to study biology and pre-medicine.

Twins Jason Hale, KF4NVT, and Christopher Hale, KF4JUO, of Thomasville, Georgia, will share the Charles G. Fry Memorial Scholarship. Both are Technician licensees who have been accepted at Abraham Baldwin Agricultural College where they plan to study forestry.

Barry Mather, KB7VQV, of Laramie, Wyoming. A Tech Plus licensee, Barry has been accepted at the University of Wyoming and plans to study electrical engineering.

Lindsay Schoettinger, KB8ZJT, of Englewood, Ohio. A Technician licensee, Lindsay is attending the University of Miami (Ohio) and plans to major in mathematics. She was a 1996 DARA scholarship winner.

Melissa Schweikhart, KB8EPO, of Springboro, Ohio, was awarded the John Willig Memorial Scholarship. A Tech Plus licensee, Melissa is attending Vanderbilt University and plans to major in biology and pre-medicine. She

was a 1996 DARA scholarship winner.

Andrew Sieber, KD4JTV, of Rocky Mount, North Carolina, was awarded the Frank Schwab Memorial Scholarship. A General licensee, Andrew has been accepted at North Carolina State University and plans to study computer engineering.

Karen Tessneer, KB8YPN, of Beavercreek, Ohio, was awarded the Dave Beam Memorial Scholarship. A Technician licensee, Karen has been accepted at Ohio State University and plans to study physical therapy.

All DARA scholarships are $2000 each.--Stanley R. Kuck, NY8F.

CENTRAL ARIZONA DX ASSOCIATION SCHOLARSHIP WINNERS

The Central Arizona DX Association has awarded three $500 scholarships. The winners of the Mike Zussman, WA7NIY, CADXA Memorial Scholarships were:

Brian Benjamin Dong, N7LJV, Tucson, Arizona. Brian plans to attend Cornell University.

H. William Fogle, KC7FVZ, Mesa, Arizona. He plans to attend Vanderbilt University.

James T. McDonald Jr, KC7EFP, Phoenix, Arizona. James plans to attend Arizona State University.

Congratulations and best wishes to these scholarship winners.--Mike Fulcher, KC7V

ARRL'S NEW TECH Q&A DEBUTS

The ARRL's Tech Q&A--Your Quick & Easy Path to a Technician Ham License, will be available starting in mid-August. Written by Larry Wolfgang, WR1B, the new book includes each question and answer for the new Novice (Element 2) and Technician (Element 3A) question pools. Where's the "quick and easy" part? The format of Tech Q&A will make studying for the Tech exam a breeze. Each question is printed with the correct answer letter shown in bold type. An accurate, but brief explanation follows each question. It's everything the aspiring ham needs to pass the Technician exam in a straightforward, uncluttered presentation--no hunting around.

Tech Q&A is $12.95. Order Item #6222. Call toll-free 888-277-5289 to order.

Note that because of the UPS work stoppage, you might experience unusual delays with delivery of ARRL Publications orders. Orders typically shipped via UPS are being routed to other services, but nearly all other carriers are overloaded, and many have indicated they cannot meet their usual service standards. Expect delays with your order during this time.

SURVEYS SHOW TECHNICIAN LICENSE MOST POPULAR

A survey of ARRL Volunteer Instructors shows that most teach between one and two classes a year and the vast majority of students obtain their Technician tickets. The survey revealed that classes average eight students. Graduates are 5% Novice, 88% Technician, 5% General, 1% Advanced, and 1% Extra.

Approximately 11% of the more than 2000 Volunteer Instructors responded to the survey. Of that group, 90% reported they use Now You're Talking in their classes. The instructors said that 80% of their students join the ARRL.

In another survey, ARRL-Registered School Teachers reported that their students' favorite ham radio activities, by far, were HF DXing, taking part in licensing classes, radio club activities and VHF/UHF operating. The 108 teachers who returned their surveys (approximately 11% of the total) say they introduced nearly 8800 students to ham radio. The teachers said that about 60% of their licensing classes prepared youngsters for the Technician license and 40% for the Novice ticket. Most teachers said they use ARRL study materials.

Volunteer Instructors and ARRL-Registered School Teachers were polled last spring. The ARRL Educational Activities Department recently compiled the results of the two surveys.--Rosalie White, WA1STO

HELP KEEP ARCHIE ALIVE

Archie Comics have traditionally been one of the best Amateur Radio tools for use in classrooms, Scout gatherings, and other youth get-togethers. These books introduce young people to lifetime adventures they can enjoy through Amateur Radio. In many cases, these comics are the first step toward getting a license and getting on the air. But, we gave away the last ones several months ago.

We need your financial assistance to help defray the costs of replenishing our supply of these popular Amateur Radio materials. Our current goal--the cost of the minimum print run of 100,000 comics--is $30,000. Donations towards Archie Comics will be used only for that purpose. We'll list the names of contributors making donations of $25 or more in the front of each book. We'll give special recognition in print to clubs and others who make substantial contributions. The ARRL is a 501(c)(3) organization, and donations to the League are tax-deductible to the extent permitted by the IRS.

Please make checks or money orders payable to "ARRL--Educational Activities Fund." On the memo line, please write "Archie Comics." You may put your donation on a credit card. A donation form is on the Web, http://www.arrl.org/ or you can call 860-594-0340. Be sure to designate "Educational Activities Fund." Our deadline to receive donations is October 31, 1997.--Dan Miller, K3UFG

ELGAR TREHAME, VK5ED, SK

Well-known satellite enthusiast Elgar Trehame, VK5ED, died August 6, 1997. He had been reported in ill health for several weeks. VK5ED was very active on AO-10 and AO-13, and often was called upon to support the command station activities on AO-13, spending many hours collecting 400 baud PSK telemetry. His wife, Janette, survives.--AMSAT News Service, with thanks Graham Ratcliff, VK5AGR

IN BRIEF:

* This weekend on the radio: The ARRL 10 GHz and up Cumulative Contest, the North American QSO Party (SSB), the KCJ (Keyman's Club of Japan) Contest, SARTG RTTY Contest, and the SEANET Contest (SSB) are on tap this weekend. See August QST, page 95, for details.

* Mir Achievement Award available: Those who have worked the Russian Mir space station on both voice and packet are eligible to receive a Mir Achievement Award, an 8x10-inch certificate suitable for framing. A $10 donation includes all shipping and handling costs. Send a QSL or postcard with your name, address, and call sign to Mir QSL manager Dave Larsen, N6CO, Box 1501, Pine Grove, CA 95665; e-mail doc@volcano.net. Larsen reminds hams not to call Mir on voice until they hear Mir calling CQ.

* Ham radio aids in biker's rescue: Mountain biker Tom Thompson is grateful for ham radio, which played a vital role August 3 in getting him prompt medical attention after he was injured during a ride in Pennsylvania's Lehigh Gorge. Ham and paramedic Joe Cummings, N3SQR, of Warrington, Pennsylvania, was biking with his daughter in the area when they came upon Tom, seriously injured with broken bones and facial injuries. Joe used his H-T and the Carbon Amateur Radio Club repeater to reach Ann Keiser, KO3M, who called 911 and got help on the way. Tom was especially fortunate that a ham found him, since the area where he was injured is outside the normal range for cellular telephones.--Amy Zimmerman, KD3TI

* Jamboree generates new hams: The recently ended National Boy Scout Jamboree at Fort A. P. Hill in Virginia yielded 37 new or upgraded licensees. The breakdown included two Novices, 28 Technicians and seven Tech Plus licensees. K2BSA/4 operated from the Jamboree on most bands.

* KC5VCF wins army medal: The US Army has awarded Alfred Fronefield, KC5VCF, the Military Outstanding Volunteer Service Medal for his volunteer service in 1995 and 1996. Among other things, Fronefield was cited for having logged more than 100 volunteer service hours at the San Antonio chapter of the American Red Cross, for using ham radio to help coordinate a search for a missing woman, and for alerting authorities and helping to manage traffic following a multiple car accident. The citation said that Fronefield "characterizes the selfless attributes of a fine humanitarian and professional soldier." Fronefield, who's stationed with the Army in San Antonio, is active with Bexar County (Texas) REACT Team 4950. He's scheduled to ship out to Germany for a three-year tour.--Lee Besing, N5NTG

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate

and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

* The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

From my understanding, in order to participate in both outgoing AND
incoming buro (which is handled by DARC), an operator must be a member

First off, thanks all for the info. Apparently, I've ruffled a few feathers here, so let me try and set things straight. Yes, I'm aware that a licsense is required for operation in the 2m band. No, I haven't gotten one yet, I'm going to do it soon. The reason I bought the Yeasu 2m is it's a real nice radio, and the 2m band is probably the best for airborn, line of site, communication. I also bought it for safety's sake. There is the possibilty on long hang gliding flights, to land (or possibly even crash!) in very remote locations, which the 2m band is uniquely suited for.

I have never once transmitted with my radio. I hope these "recommendations" from other posters to this thread, are simply that; recommendations. It doesn't help ham radio as an organization, when members stomp all over new hams, or soon to be hams. Not very welcoming. Oh well.

Thanks for the posted info,

Paul

PS - Could anyone recommend a club in the South Bay (San Jose, CA) that is offering the no-code, technicians class?

No GMRS at Radio Shack? This is terrible, just terrible. Have they no integrity? No conscience? At least they're retaining FRS. You can certainly count on me to e mail them about this. Just one,sort of 2 part question, what is GMRS and what is FRS?

ARLP033 Propagation de K7VVV

ZCZC AP33
QST de W1AW
Propagation Forecast Bulletin 33 ARLP033
From Tad Cook, K7VVV
Seattle, WA August 15, 1997
To all radio amateurs

SB PROP ARL ARLP033
ARLP033 Propagation de K7VVV

For the second week in a row, solar activity was up. Every day this past week the solar flux was higher than the average for the previous 90 days, which at this point is 73. Perhaps the long quiet spell is over.

Solar flux was expected to peak in the upper-eighties this weekend, but the latest forecast shows that it probably already peaked at 82 on Wednesday, may drop to 80 on the day this bulletin is out, 78 on Saturday, and 76 on Sunday, August 17. Solar flux is expected to head back toward 80 around the end of the month, and up again toward 80 after the first week in September.

The ionosphere thins due to heating during the Summer, and this effect lessens as we move toward Fall in the northern hemisphere. The result should be better daytime MUF values. As daylight hours shorten, 40 meters should also get better at night. Currently 20 meters is still the best all around band for worldwide propagation.

Sunspot Numbers for August 7 through 13 were 55, 65, 61, 31, 53, 57 and 61 with a mean of 54.7. 10.7 cm flux was 77.9, 77.8, 78.1, 78.3, 79.5, 80.8 and 82, with a mean of 79.2, and estimated planetary A indices were 6, 5, 7, 7, 9, 5, and 12, with a mean of 7.3.

DTMF mean Dual Tone Multi Freq. and this is the same as regular phone use
and its audible.
You use DTMF to make a access code to open some repeater.

CTCSS also call PL (private line) is a non-audible tone transmit at the
same time of your carrier.
The utility of that tone (PL) is to separate multi users group on the same
freq.

In conclusion you need (in some repeater) to having the good CTCSS to be
hear by the station,
to open the squelch and after you have to dial(like phone) the good DTMF
code to activate some function
like repeater on and off.
I hope this short explanation will help you to better understand the
difference.
I hope also you understand my poor english.

Salutation.

Well Gang,

I just received the new Radio Shack catalog and guess what. They are out of the GMRS radio business. They are heavy in FRS but no GMRS. I guess sales were not what they expected. However, if they had provided a radio with more features maybe their sales would have been better. I don't get it. Their ham radios, cb's and even the marine radios all have options like scanning, "privacy codes" and even weather channels built in , but I haven't seen one GMRS with these features. It seems Maxon is the only game left in town and their's is not a Cadillac. If anyone knows of a another alternative please let me know. Mean while lets all send Radio Shack an E-mail or two.

2774. Yaesu FT-3000m 800 mhz mod info

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-15 00:00:00 UTC
From: zaax@aol.com
Message-ID: <19970815143200.KAA11984@ladder02.news.aol.com>
Source record: 191918

I have been looking for a mod to enable 800mhz reception over the
forbidden band with my Yaesu FT-300M. This is is the interesting reply
that I got from one ham

73
Zack Schindler
N8FNR

Zaax..
Good morning first.
I am happy, for your reply,I didn't thought it was going to be so
soon.
Do you use Powwow?
I didn't understood very well your question: How do you like the
rig so far?
But I think the answer is yes I like it very much, it have a very
diferent design, a lot of usefull functions (despiste some very useless
functions like the dual watch), it is small, and powerfull, and have a
very
wide frequencies range (my own go from 110.995 to 180.995, 300.995 to
520.995 and 800.995 to 999.995).
From what the ham told you DON'T believe him, it CAN be done I am
completly sure about this. I will explain:
Some time after I bought my Ft-3000 the salesman who sell the
radio for me
came and told me that he knew a japanese man who knew how to unblock the
cellular band for me (the act of listening frequencies is not ilegal here
in Brasil, you can listen to everything because no one is owner of a freq,
but of course you can't say it to anyone, interfere with the comunication
or use it in any way, you must keep it for you only, so you can't
prejudice anyone) but the man would charge the service about US$45,
because
I already had paid the almost same amount to this salesman to modify my
radio (MARS/CAP only, not cellular) I few that I was deceived, because
what
I paid would include the cellular unblocking, and so I didn't paid him,
and
I made the promise I would find it on the Internet. After a long time (I
have my Ft-3000 since it's earliest days) trying to find out the
son-of-marvelous-mother modification, I contacted the salesman again and
asked him if he know anything about the mod, what he told me, if it is
true, is very interesting: the unblocking mod is not a fisical mod, but a
software hack; to unlock the cellular band you must enter a number
sequence
on the mic's keypad, you don't need to open the radio, just enter the

apropriate code on the mic; the salesman told me another thing, that he was
not very sure but maybe I said maybe, the code you enter on the keypad is not the same for all FT-3000 radios, because part of the code must have the
serial number, or part of it in the sequence, but that is not bad, the real bad news is that (he is not sure about this too) you must have the ADMS software for the FT-3000 to make the hack, for me this is no bad cause
I bought it with the radio, and personaly I encourage you to buy it, because it makes the use of the radio a LOT more easy. Another fact that make me sure that it is possible to unblock the cellular band is the fact that I sent an e-mail to Yaesu and they told me that they was not authorized to give me this and MARS/CAP mods. And if it was not enought I was able to enter any cellular frequencies in the radio memory using the ADMS even those frequencies withing block range!!!But again I was not able to freely tune up or down.
I even ofered to the japanese man a considerable amout of money if he tell me the hack, but he didn't told me and I think he is not going too. Another
thing I know is that this information is only avaible in Japanese technical
literature.
My friend, THESE HACK CODE BECOME A VERY PERSONAL MATTER FOR ME, I WANT TO KNOW IT, HOW TO DO IT, HOW IT FUNCTIONS, AND LAST BUT NOT LEAST I WANT TO BE THE ONE WHO IS GOING TO MAKE IT ON MY RADIO. I am sure you can undestand me. Every information leaks, it is just a time matter, like Einstein said on Red Alert, ''TIME WILL TELL, SOONER OR LATER, TIME WILL TELL''
These is it, let's pray for some luck and wait that these soner or later
be soon and not late.
Good luck.
Felipe Castanho

You should submit this to QST; maybe we'd stop scaring off so many
potentially good hams. "Jim" probably went back to his computer where
he could hide and no one would notice him.

Made me sad, but how many times have we heard it?. It reminded me of
my young days on 40M AM when a bunch of alpha-hotels on 7202.5 Kc across
the bay would run me off the frequency because I was a "kid". It also
reminded me of my first time on 2M FM many years later; no one would talk
to me except an old geezer named Oscar who invited me over for coffee.
If it hadn't been for Oscar, like "Jim", I'd have sold my HT also.

I have a few Lightman safety strobes for sale.
-Keep them in your car if you need assistance or help someone (amateurs always help stranded people).

-Compact triangle design 3 1/2" each side
-Operates up to 7 hours on 2 AA batteries
-true Xenon flash 83x per minute 800,000 candle power!!!
-weather resistant -40F to +140F weatherproof

-comes in amber,lens is user replaceable, other lens available blue, red, clear,green

-For $19.95 you get:
Lightman strobe(amber), carry bag, belt clip, suction cup, and magnet mount

-For $11.95 you can get a lens kit red,amber,green and blue.

2777. Italian Ship's Radio Officer Seeks Contacts With U.S. Peers

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-15 00:00:00 UTC
From: Jim Navary <chunga@arrowweb.com>
Message-ID: <01bca9cf$cd171e20$5451accf@jim>
Source record: 191921
Cross-posted to: misc.transport.marine,rec.radio.amateur.boatanchors,rec.radio.amateur.misc

Hi all,

A couple of years ago I was active as an amateur radio operator and shortwave listener spending lots of time monitoring the maritime HF bands. As part of my hobby I would write to ships' Radio Officers that I had heard to request confirmation of my reception.

I have been inactive in the hobby for a few years. A few days ago, however, I received an unexpected telephone call from one of the Radio Officers that I had corresponded with. He is Italian and was on board the M/S Monte Oliveto off the coast of Italy.

He, as are most RO's, is very concerned about the impact of the GMDSS system on his career and the shipping industry in general. He wanted to know if I could arrange for him to get in contact with any U.S. Radio Officers to discuss issues surrounding the move to GMDSS. I told him that I have been inactive but that I would see if I could locate someone to put him in touch with.

He will be calling me again on August 20th to see if I have had any luck. So, the purpose of this posting is to try to locate any ships' Radio Officers who would be willing to talk to him.

If you can help, please contact me via email at either chunga@freedomnet.com or jtn@midatlantic.net and I will relay any information you can provide to him on August 20th.

Thanks,

Jim Navary

A letter to the ARRL:

The ARRL's response is below my letter.
August 4, 1997

Dear President Stafford,

I received the enclosed letter from Bart Jahnke. I have reason to
believe that I was fired because of my opinions rather just cause
related to my VE activities. Further I know several VEs that have never
been active in giving a test (as I have) that have not lost their status
as a VE examiner. Additionally when I administer a test I do discuss any
opinions whatever.

I am an electronics teacher thus I know how to be responsible.
Finally the VE program is a quasi government program and if I have been
fired due to my opinions I will not hesitate to contact the FCC. If I am
not wanted as a volunteer in other ARRL programs, fine but you have
accepted a role related to the federal government and that shall not be
affected by my opinions.

Restore my status FORTHWITH or give me a legitimate reason that
shows I am not being discriminated against.

ARRL response:

2780. The code hams practice

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-15 00:00:00 UTC
From: Burt Fisher <burt2@rocketmail.com>
Message-ID: <33F51BB7.93D29BBA@rocketmail.com>
Source record: 191924

The Radio Amateur is:

CONSIDERATE...never operates in such a way as to lessen the pleasure of other's. (unless of course it is a contest).

LOYAL...Offers loyalty, encouragement and support to other amateurs, local clubs, and the American Radio Relay League, through which Amateur Radio in the United States is represented nationally and internationally. (unless of course money is involved or in many cases little support shall be given if the ham is old (almost always the case)

and the new ham is young).

PROGRESSIVE...with knowledge abreast of science, a well built and efficient
station and operation above reproach. (unless of course you have any money the you become an "appliance operator").

*FRIENDLY...slow and patient operating when requested; friendly advice and
counsel to the beginner; kindly assistance,cooperation and consideration for
the interests of others. These are the hallmarks of the amateur spirit. (unless of course it is a flea market (every man for himself).

BALANCED...radio is an avocation, never interfering with duties owed to family,
job, school, or community. (this is rarely true. A good contester will leave the family on Christmas if there were a contest, a local kid, known as "The breather" sits by his "hamradio" day and night talking to anything that comes along except of course a girl. Finally the only thing most hams will leave their "ham radio" for is a cup of C O F F E E.

PATRIOTIC...station and skill always ready for service to country and community. (unless there is DX around or a contest, in such cases it is accepted to ignore any emergencies).

Sure, Paul, here goes:

DTMF (Dual Tone Multi-Frequency) refers to the tones (i.e., the trademarked "Touch Tone") produced by the keys on your keypad in DTMF mode. These tones are often used to control repeaters and access their autopatches, in addition to dialing telephone numbers when using the patch. Many newer radios also have a "paging" system built in, whereby a bell-tone is sounded and the receiver squelch opened only when a predefined series of DTMF tones is received.

CTCSS (Continuous Tone Coded Squelch System), or PL (Motorola's "Private Line"), employes a sub-audible tone superimposed on the transmitted signal. A repeater or remote base receiver will then only respond to a signal with a specific tone. Again, some newer radios can also decode the CTCSS tone and only open the receiver's squelch when that tone is received.

Hope This Helps,

People like that 'radio cop' are just big time losers who like to power trip on the radio. If they had any kind of real life, they would have more tolerance for others... who care is someone uses q-codes etc? Since it is not the accepted practice, a gentle reminder is all that is needed... 'say jim, we don't use q codes on vhf, its not needed.'
I notice the same thing happening on the internet. People who would run from any kind of confrontation face to face, suddenly have brass ones when hidden behind the computer screen. And suddenly they think they have to 'tell everyone else how its done'. And then there are those who think there opinion is so important that they have to post it... err hey wait a minute ...

[Replace the x with 8 for correct E-Mail Address]

Bury Radio Society is pleased to announce that they will be holding their ever popular Amateur Radio and Computing Fair for 1997 at the Castle Armoury in Bury on Sunday, the 14th September, 1997.

The Castle Armoury, known locally as the Drill Hall, is a New Venue for this Annual Fair, being just round the corner from the Former Venue (the Castle Leisure Centre). It is in Castle Street, just near the Parish Church and the Two Tubs Pub in the Town Centre of Bury, in easy reach of the Bus/Metrolink Interchange and Junction 2 of the M66 Motorway, from where it will be signposted. Talk In will be on Channel S22 (145.550 MHz FM) in the Two Metre Amateur Band. There will be ample Car Parking available near to the Castle Armoury on the Day, look out for the Stewards.

The Doors open at 10.30 am, half an hour earlier for Disabled Persons. There will be a multitude of Stalls and Exhibits covering all Aspects of the Hobby of Amateur Radio as well as Computing. There will be a Bring and Buy Area and a Prize Draw also.

There will be ample Seating Areas within the Hall so that Visitors may rest between going round the Stalls and Exhibits and to provide an opportunity to meet up with and chat with Old Friends. There will be Hot and Cold Food and a Licensed Bar available also.

For those Members of the Family not interested in either Amateur Radio or Computing, the Town Centre of Bury has many Attractions including the Castle Leisure Centre, which has many Sporting Facilities as well as two Swimming Pools, and the East Lancashire Railway, which often has Steam Trains running at Weekend as well as many interesting Exhibits, both these Attractions being less than two minutes walk from the Castle Armoury.

This year's Bury Radio Society Annual Amateur Radio and Computing Fair will be bigger and better than ever and certainly not to be missed.

Potential Exhibitors should write to the Exhibitions Manager, Bury Radio Society, c/o Mosses Centre, Cecil Street, Bury, Lancashire BL9 0SB without delay as there are only a few Stalls

still available.

The Bury Radio Society meets every Tuesday Evening at the Mosses Centre in Cecil Street, Bury, commencing at 7.45 pm and Everyone is welcome. The Mosses Centre is in the Town Centre just across the Car Park from the Dual Carriageway (Angouleme Way). Ring 0161 761 2079 during Office Hours for Directions to the Mosses Centre.

I post from my sailboat using a laptop; I only spend about 45 minutes per day "stare at a crt."

I'm at the beach from 6 to 8 every morning swimming (the water temperature is a chilly 83 - brrrr). I imagine the rest of you folks are on the freeway during those hours.

I need the new testing program for the new regulations for novice and
tech classes.
I have the old one but with out the new questions and my test on 8/19/97
it is down to the wire.
If there is one out yet?
Help Please!

Lyle

(I do have the new book but I learn better from the program)

>
> Is a business band radio the way to go? VHF/UHF?

Yep....VHF or UHF intenirant (sp) channels would be ok...

>
> Is it hard to obtain a license?

No...for the above named channels, you merely fill out a FCC form and mail it in with check for fee...BUT you accept any and all interference on those channels (sometimes called "red dot" or "yellow dot" etc...) If you want a cleaner channel, you have to pay more for coordination, etc...

> Does anybody make a base station?
> (cost comperable to the hand helds or less..)

Just use a HT on a power supply (plenty of HTs run off 12V)...and if you need a base antenna, you can easily put a simple groundplane up. I dont recall what the rules are on the Intinerrant channels (hey I spelled it right!) currently regarding base station operation...

>
> Did I pick an apropriate newsgroup?

Close...there is NO two way radio NG currently...There is a fake rec.radio.commercial-lmr but it was NOT formed properly and MOST ISPs donot carry it because it does not meet Internet requirements..

Get a copy of Part 90 and check the Int.channels...VHF or UHF with 2-5w Hts should cover what you want...VHF is better for long distance...UHF is better for in buildings, etc....but worse in trees...especially PINE trees..Check with local two way radio shops for what they have on the Intinerrant channels and the current rules in Part 90 of the FCC rules

25 Million E-mail Addresses on CD-ROM

If you are doing Bulk Emailing then you know how time consuming the collection (extraction) of addresses can be.

At a rate of even 5,000 addresses per hour, it will take a dedicated computer and Internet connection 24 hours, 7 days a week, 30 days a month, to collect 3,600,000 addresses.

At this rate, it would require approximately SEVEN MONTHS to extract 25,000,000 addresses.

If you are marketing on the Internet and want to use bulk emailing for your business this SPECIAL OFFER should be of interest to you.

Our TWENTY-FIVE MILLION EMAIL ADRESS LIST is being made available through this special
offer for only $199 on CD-ROM.

That's right -

25 Million Adresses for $199.00! To order this CD-ROM, simply call us at (812) 597-1000 and ask for offer #127.

We regularly charge $999.00 for twenty-five million e-mail adresses, which is a very competitive rate compared to other organizations in this business. $199 for this large of a list is a real steal and will not last for long.

So call today! 812-597-1000 (offer #127)

Due to the overwhelming response we've had to this limited-time offer, our telephone lines have been very busy accepting incoming orders. Please be patient when calling, as this offer will not last for very long.

>he could hide and no one would notice him.

I take exception with the "radio cop" characterization.

Now, I realize that the guy was a new ham, but I pose this question
to you: exactly when SHOULD someone have mentioned it to him?

A long tradition of ham operators is to help one another out, and
that includes helping new operators who get on the air with poor operating
practices. From what Hans posted, he indicated the "radio cop" was
very polite about the incident, and explained in nice terms that
terms like "first personal" were inappropriate.

So, what's the alternative? Not say anything to the guy, and let other
new hams hear him on the radio using "first personal", which ultimately
makes them think it is "okay"?

Of course, if this guy had a real elmer, this probably
wouldn't have happened, but that's a different argument.
